DECEMBER 2003 REV 4

*Specifications and Function Subject to Change without Notice*

## 1. INTRODUCTION

The AFW/APF series are designed and programmed according to the OIML R-76 Class III requirements.

These scales are sealed to prevent unauthorized access to internal parts. Ender users should be advised not to undertake any trouble shooting except those listed on the operation manual.

This maintenance manual contains of certain information that may result in fraudulent use. Do not release any part of this manual to any end users or un-authorized persons.

The internal mini jumper should be so set to prevent un-authorized settings or alternations.

Should a load cell has been replaced, make sure that the protection devices are properly set.

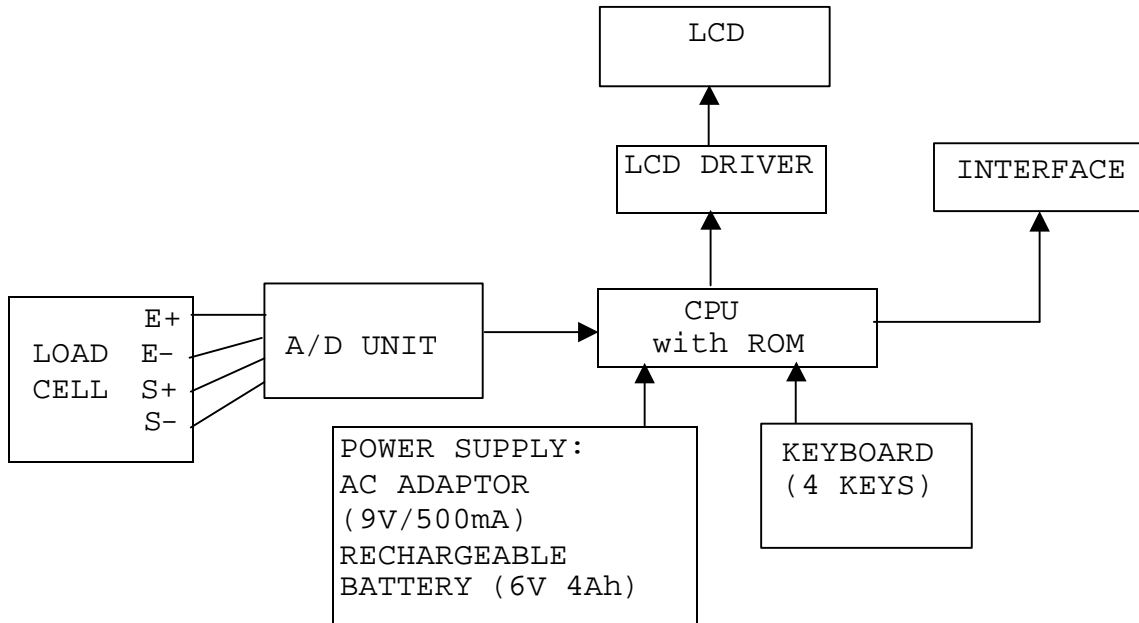

After servicing, it is necessary to go through all tests and procedures to ensure the scale meets all the meteorological and approval requirements.

Here are some features of the AFW/APF series

1. Designed to meet OIML-R76 class III requirements.
2. 1/3000 external resolution
3. Zero indicator
4. Tare indicator
5. Negative value indicator
6. Subtractive tare function.
7. Power on zero function.
8. Manual zero function.
9. Auto power Saving Function
10. WTN LCD display, 25.4mm height (5 1/2 digits)
11. Low battery warning signal.
12. 2 types of Calibration
13. Mini jumper to prevent end-user calibration
14. Optional EL backlights
15. Accumulation function available
16. Built-in rechargeable battery operated
17. Overload protection
18. Battery operating time: 200 hours plus after charged

## 2. SPECIFICATION

### 2.1 SYSTEM BLOCK DIAGRAM

#### **Description:**

When an article is placed on the platter, the load of the article is applied to the load cell inside the scale.

The resistance to the excitation current in the strain gauge will then change and the analog output signal varies.

It is amplified and digitized continuously by the A/D converter into a digital signal. Subsequently, the resulting count is processed and managed by the CPU. The CPU refers to the instructions from the keyboard, and then conveys the output data to LCD driver, which formats the data into readout on the display panels.

## 2.2 PHYSICAL LAYOUT OF ELECTRICAL CONNECTION

**2.2.1 CONNECTION BETWEEN INDICATOR AND PLATFORM( 5 PIN ROUND CONNECTOR )**

PIN ASSIGNMENT

INDICATOR

PLATFORM

**2.2.2 CONNECTION OF RS-232 BETWEEN INDICATOR AND PC(9PIN D-SUB)**

PIN ASSIGNMENT

INDICATOR(9PIN D-SUB, FEMALE)

PC(9PIN D-SUB, MALE)

\*\* RTS & CTS has been shorted internally.

**BAUD RATE ; 9600**  
**DATA BIT ; 8**  
**PARITY BIT ; N(NONE)**  
**STOP BIT ; 1**  
**CODE ; ASCII**

## 2.3 GENERAL SPECIFICATION

### 2.3.1 Overall View

AFW/APF SERIES

### 2.3.2 Overall Dimension:

250(W) x 160(H) x 100 (D)mm

### 2.3.3 Model Specifications

Model No.	Capacity (Max)	Division (e)		Platform
		OIML	Non-OIML	
AFW-B30	30kg	0.01kg	0.005kg	Aluminum Alloy with Stainless Steel Cover 330 x 450mm
AFW-B60	60kg	0.02kg	0.01kg	
AFW-B150	150kg	0.05kg	0.02kg	
AFW-F60	60kg	0.02kg	0.01kg	Aluminum Alloy with Stainless Steel Cover 425 x 525mm
AFW-F150	150kg	0.05kg	0.02kg	
AFW-F300	300kg	0.1kg	0.05kg	
APF-60	60kg	0.02kg	0.01kg	Aluminum Alloy with Stainless Steel Cover 425 x 525mm
APF-150	150kg	0.05kg	0.02kg	
APF-300	300kg	0.1kg	0.05kg	
AFW/APF indicator	User Define	1/3000	1/30000	User Define
Class	III			
Maximum Tare Range	OIML= 1/3 Max ; e; Non-OIML= Full Range			
Power on Zero Range	±10%			
Manual Zero Range	±2%			
Minimum Load	20e			
Operation Environment	0°~40°C (32°~104°F), Non-condensed. R.H. ± 85%			
Power Consumption	0.1W			

### 2.3.4 Main Components Used

Microprocessors: SM8958

Crystal Oscillator: 11.0592MHz

Display Device: WTN Liquid Crystal Display

### 2.3.5 Analog Specification

Input sensitivity: 0.96mV/V~1.8mV/V VS. Full Capacity  
Zero Range Adjustment: ± 2% of rated capacity  
Zero Balance Range: ±10% of rated capacity  
Load Cell Excitation Voltage: DV5V  
A/D Conversion Speed: 10 times/second  
Internal Resolution: 160000

### 2.4 INTERNAL SETTINGS AND CALIBRATION METHODS

The AFW/APF indicator is designed to have no preset capacity and division, but for user to define. Depends on the requirement and the purpose of the indicator is operating under, the resolution can be set anywhere from 1/3000 to 1/30000.

When **oiml** mode is selected and application is legal for trade, the overall resolution will be limited to 1/3000 with extended display for reference. When **norm** mode is selected and application is not legal for trade, the overall resolution can be set to a maximum of 1/30000. The indicator also can be set to have dual intervals when parameter is input.

#### TO SET TYPE (Select between OIML and non-OIML application)

- a. Indicator is off
- b. Press and hold **TARE**, then press **ON/ZERO**
- c. Indicator displays **F.1**
- d. Press **TARE** until indicator displays **F.3**
- e. Press **MODE** to enter
- f. Indicator displays **TYPE**
- g. Press **ON/ZERO** to select operating type between **oiml** or **norm** for non-OIML
- h. Press **MODE** to confirm

#### TO SET WEIGHING UNIT

- i. After **TYPE** is selected, indicator will display **unit**
- j. Press **ON/ZERO** to select the weighing units of kg, g, lb/kg, lb/g  
-To enable the avoirdupois units, press **MODE** when the lb/kg or lb/g sign appears.  
-To disable the avoirdupois units, press **MODE** when the kg or g sign appears.

#### TO SET DECIMAL POINT (For capacity and division readings)

- k. After **unit** is selected, indicator will display **dp**
- l. Press **ON/ZERO** to select number of decimal place. It can be set

- from no decimal place up to 4 decimal place
- m. When selected, press **MODE** to confirm

#### **TO SET RATED CAPACITY AND DIVISION**

(For Single interval, it means  $\text{Max} \times e$ ; for Dual Interval, it means  $\text{Max}_2 \times e_2$ )

- n. After decimal place is selected, indicator will display **CAP2**
- o. Press **ON/ZERO** to enter and utilize **ON/ZERO** to increase value, **TARE** to move cursor to the next digit. Press and hold **TARE** key to backspace
- p. The division must be selected to complete the setup before proceed to the next selection
- q. Press **MODE** to confirm

#### **TO SET DUAL INTERVAL ( $\text{Max}_1 \times e_1$ )**

- r. After capacity and division is set, indicator will display **CAP1?**  
If dual interval does not require, press **MODE** to skip to **F4** to complete the internal setup. However, if dual interval is required, press **ON/ZERO** to enter and utilize **ON/ZERO** and **TARE** keys to set the capacity and division.
- s. Press **MODE** to confirm and follow by **ON/ZERO** to quit

**NOTE 1:** You must reset capacity every time when you change the type between OIML and NORMAL.

**NOTE 2:** Each range must not exceed 1/3000 and 1/6000 for overall capacity under OIML mode and 1/30000 for NORMAL mode. For example, if **CAP2** sets as 3000kg ( $\text{max}_2$ ) x 1kg ( $e_2$ ), then **CAP1?** can set as 1500kg ( $\text{max}_1$ ) x 0.5kg ( $e_1$ ). So for OIML,  $\text{max}_1/e_1$  &  $\text{max}_2/e_2$  will not exceed 1/3000 and  $\text{max}_2/e_1$  will not exceed 1/6000. For NORMAL,  $\text{max}_2/e_1$  must not exceed 1/30000.

**NOTE 3:** When **OIML** type is selected, indicator will automatically regulate user to program the resolution within 1/3000.

**NOTE 4:** When setting up capacity, user must program all digits including division before press **MODE** to confirm.

## CALIBRATION METHODS

- a. Indicator is off and nothing is on the platform
- b. Press and hold **MODE**, then **ON/ZERO**
- c. Indicator displays **CAL.\_1**
- d. Press **MODE** for **YES** and indicator will self calibrate zero point before proceed to the first point calibration
- e. Indicator will show ;Load XXXX;, for which XXXX is 1/3 of the full capacity. Load the weight according to the display
- f. Press **MODE** when display is flashing
- g. Indicator displays **CAL.\_2**
- h. Press **MODE** for **YES** or **ON/ZERO** to exit
- i. Indicator will show ;Load YYYY;, for which YYYY is 2/3 of the full capacity. Load the mass according to the display
- j. After weight is placed, press **MODE** when display is flashing to complete the calibration procedures

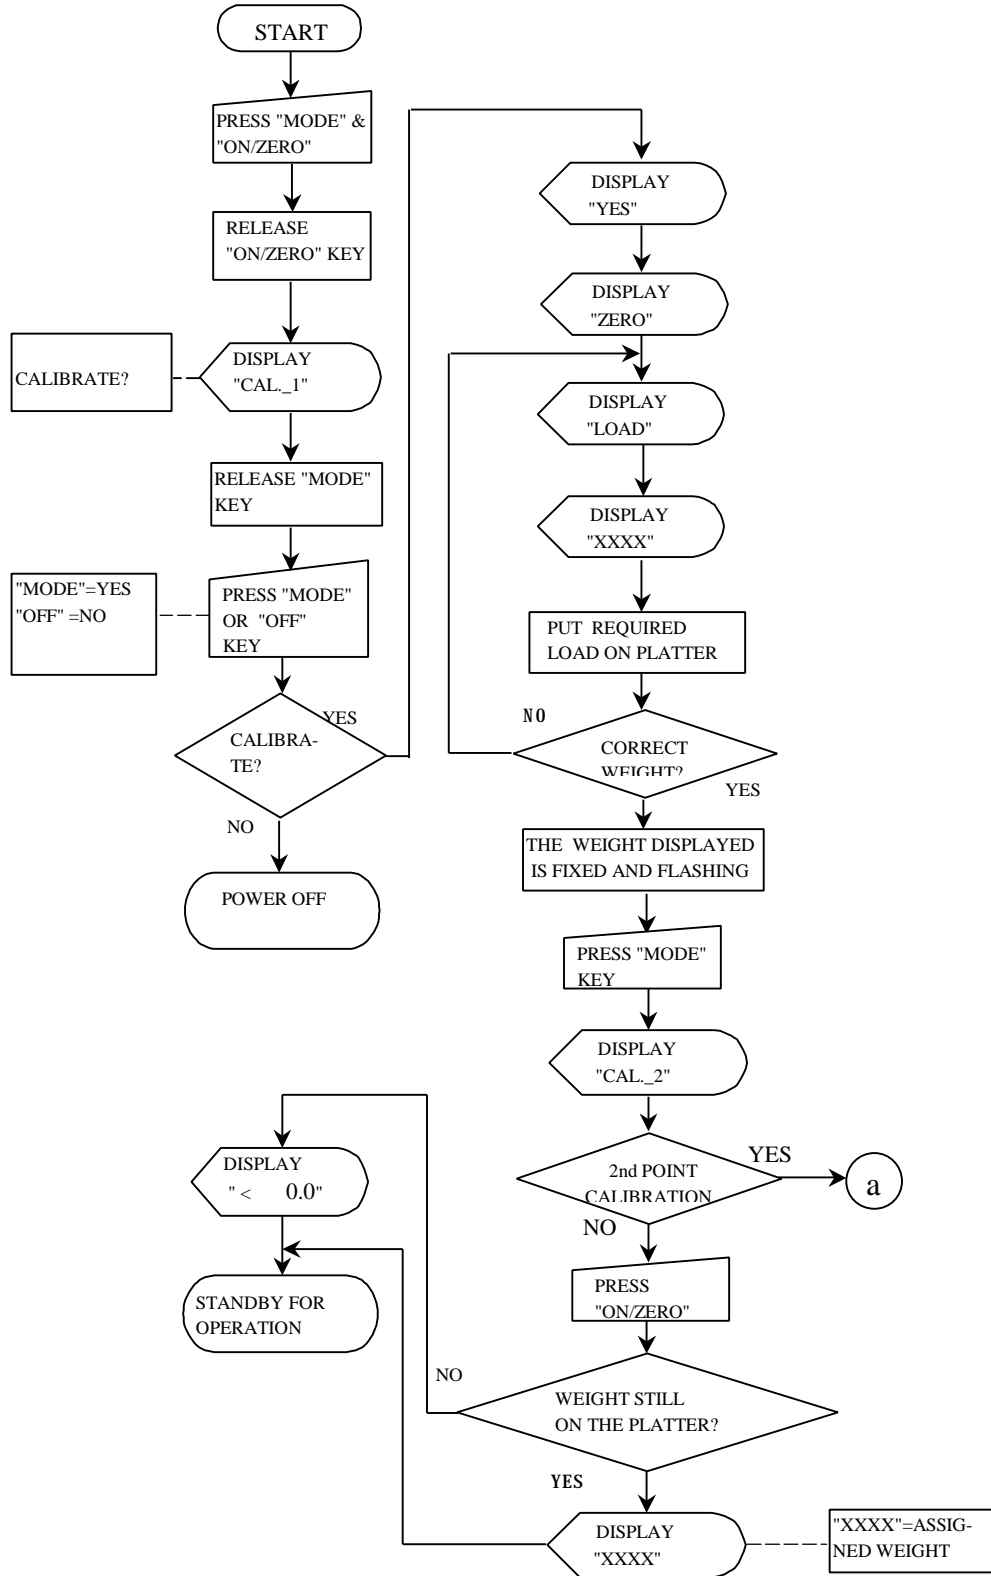

## ODD WEIGHT CALIBRATION

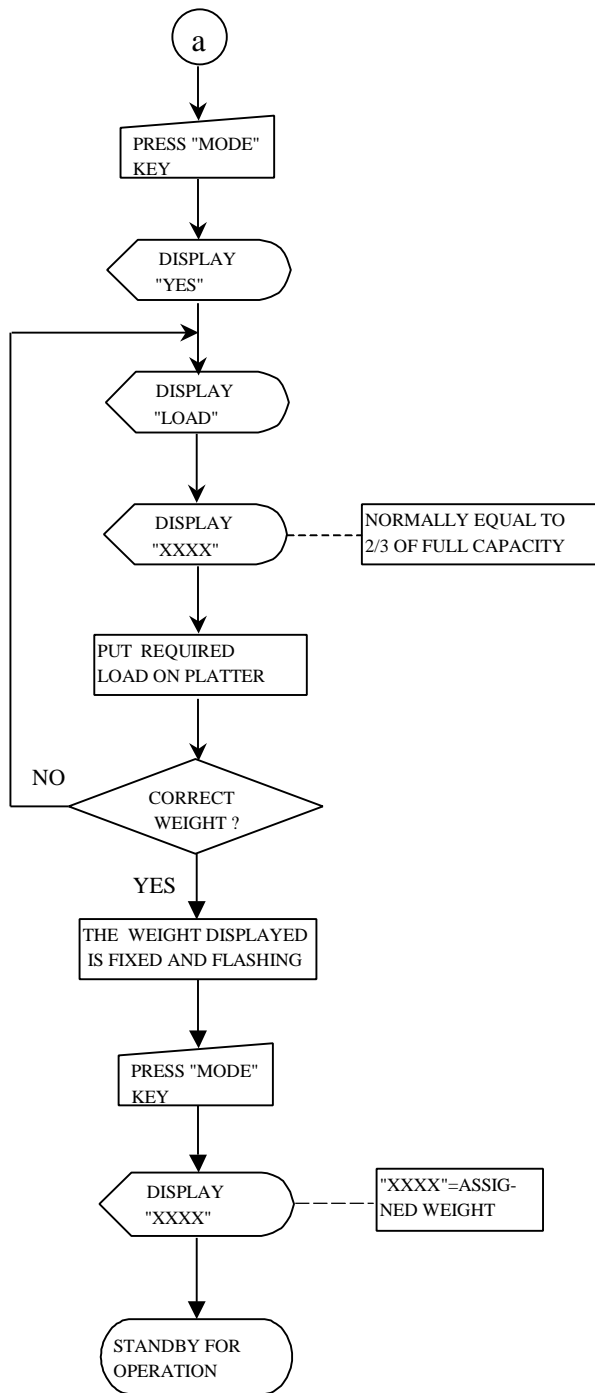

- a. Indicator is off
- b. Press and hold **TARE**, then press **ON**
- c. Indicator displays **F.1**
- d. Press **MODE** to enter and indicator will show offset value
- e. Press **MODE** again and indicator displays **CAL.\_1**
- f. Press **ON/ZERO** and manually enter the weight that intends to calibrate by utilize **ON/ZERO** to increase and **TARE** to move cursor
- g. When the weight is set, press **MODE** to begin the calibration and scale will self calibrate zero point before proceed to the first calibrate weight that was manually entered
- h. Load the mass according to the display
- i. Press **MODE** when display is flashing
- j. Indicator displays **CAL.\_2**
- k. Press **MODE** for **YES** or **ZERO** to exit
- l. Repeat step **f** to set the weight of second calibration point.
- m. Load the mass according to the display, the second point has to be higher than first point
- n. Load the mass according to the display. Press **MODE** when display is flashing to complete the calibration procedures

**Note:** When manually enter the weight for calibration, the first point must not be less than  $1/6$  of the full capacity. The second point must not be less than the first point. But it is highly recommend setting the second point at about  $2/3$  of the full capacity.

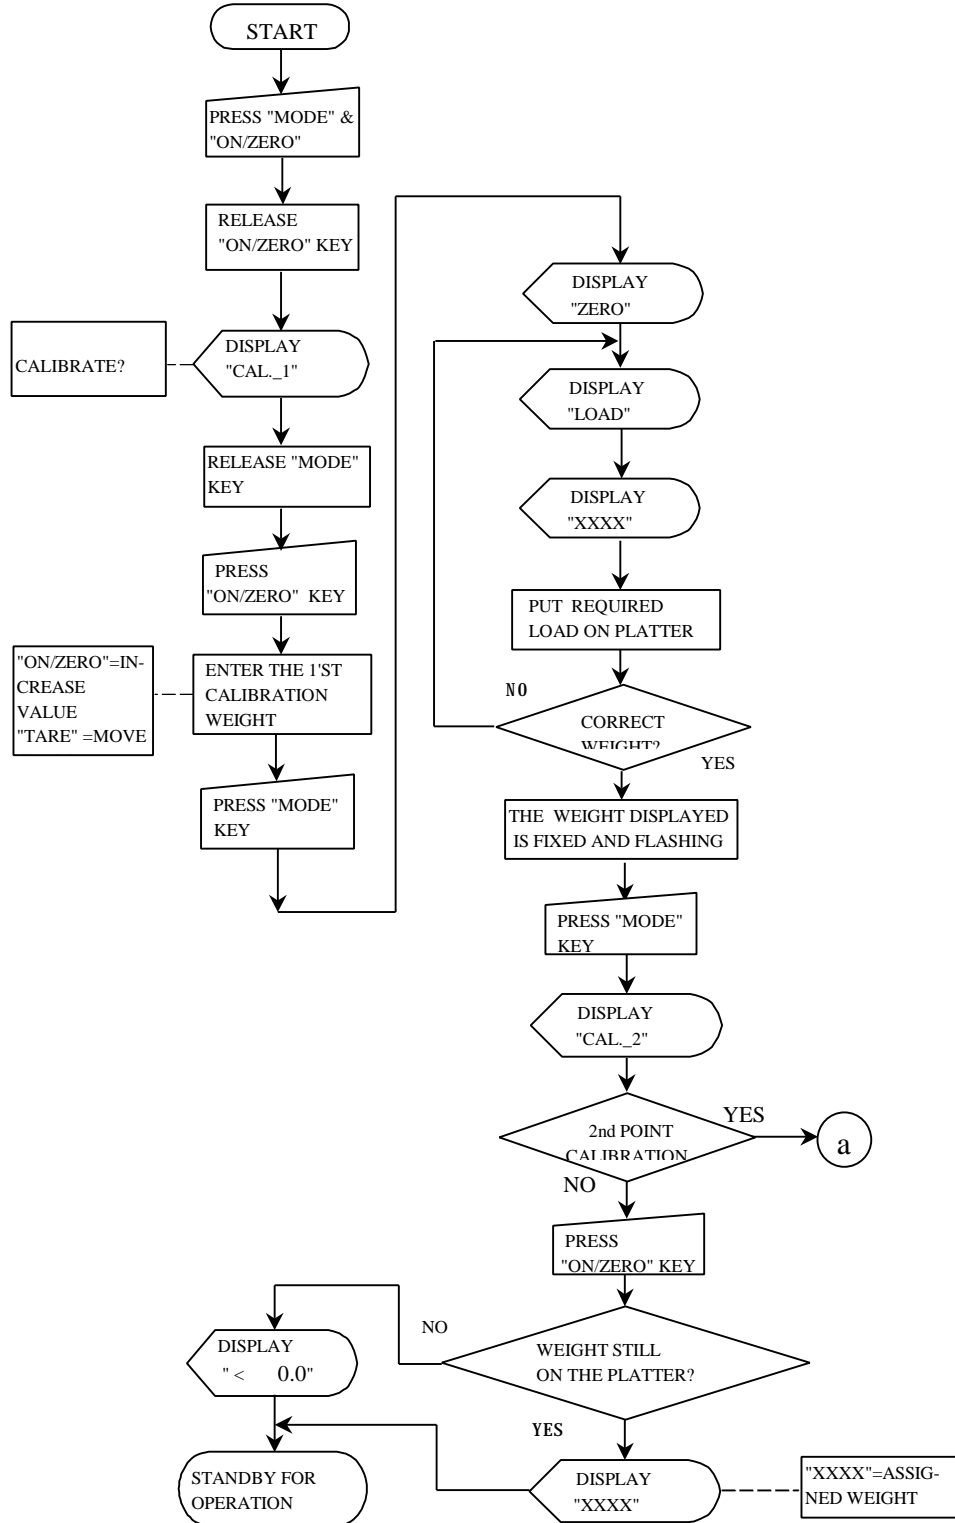

## 2.5 FLOW CHART

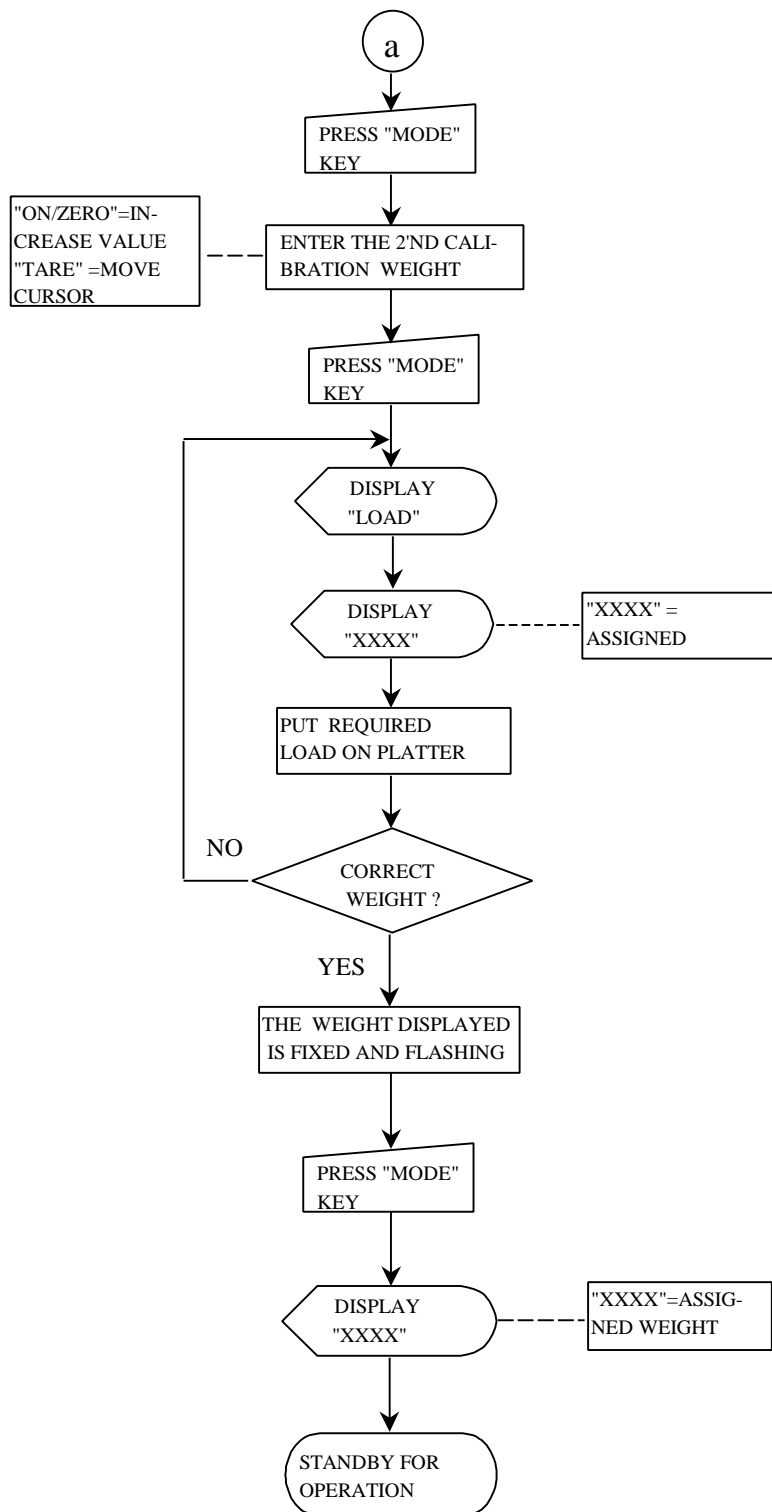

### 2.5.1 Auto Calibration (for end-user)

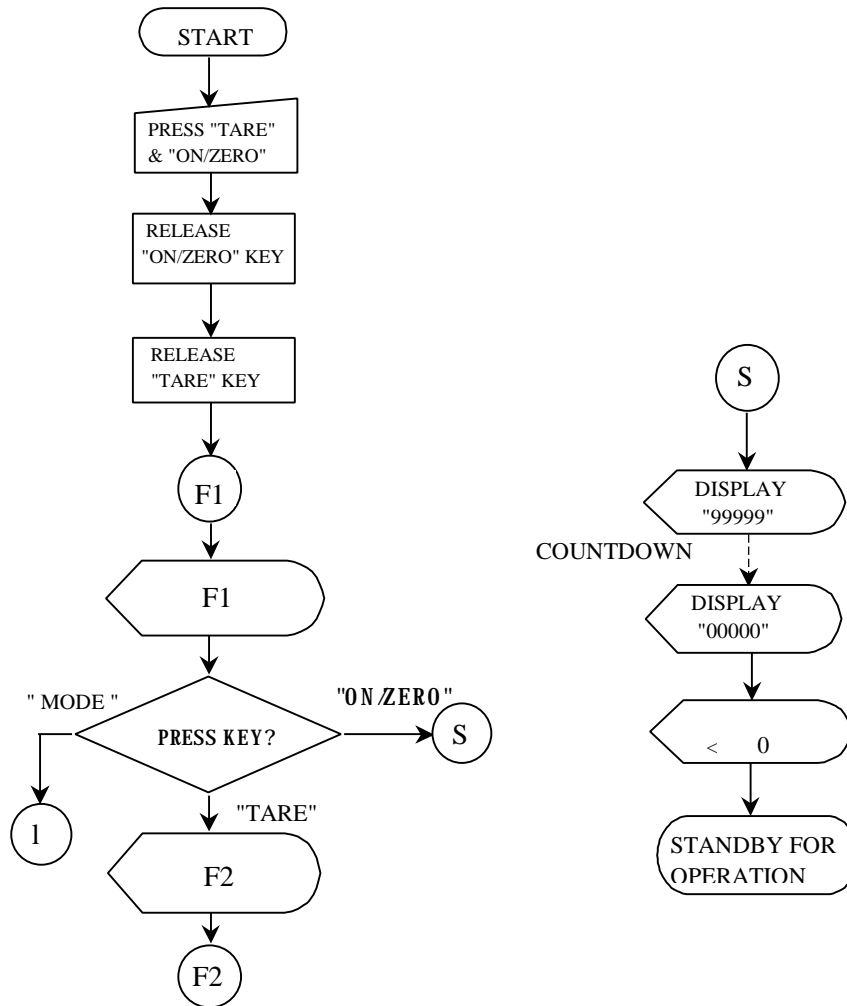

# ODD WEIGHT CALIBRATION

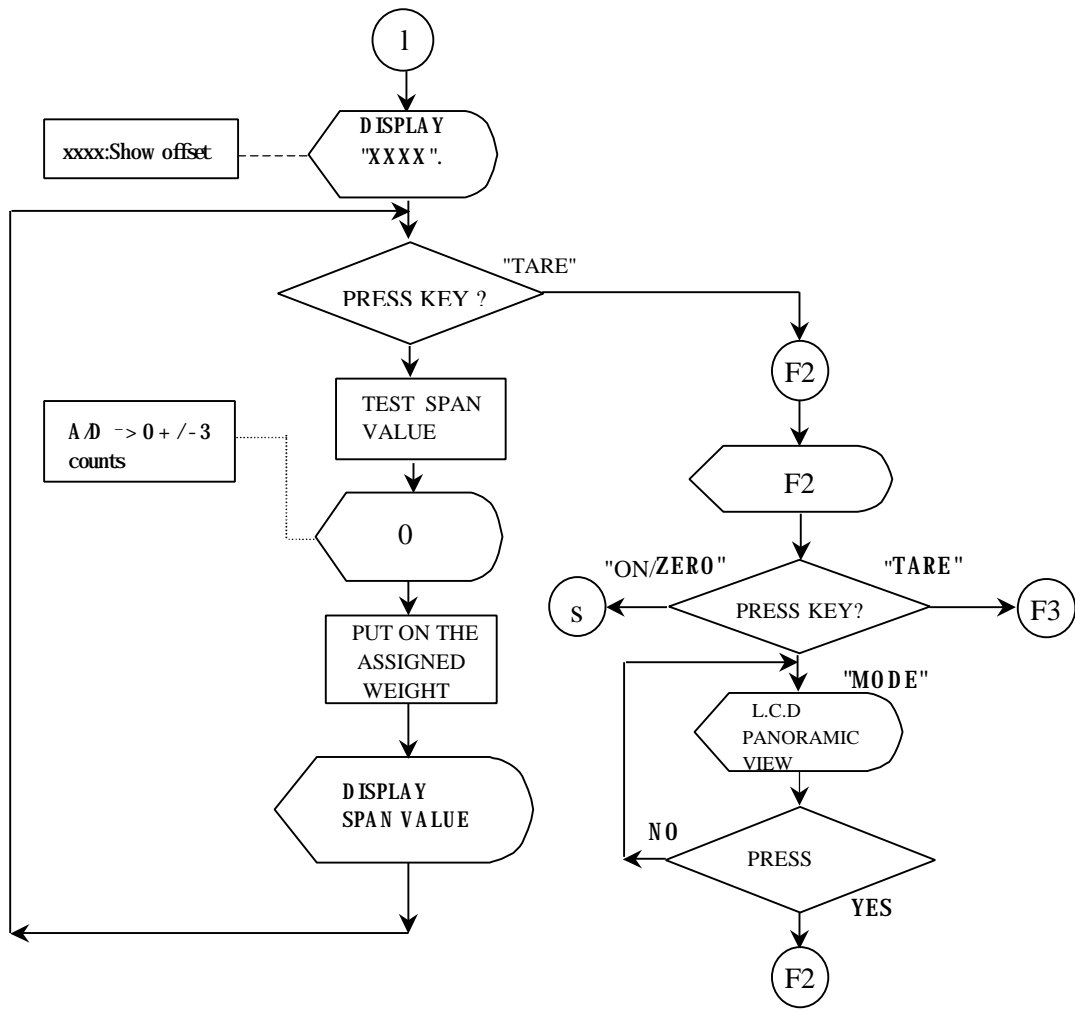

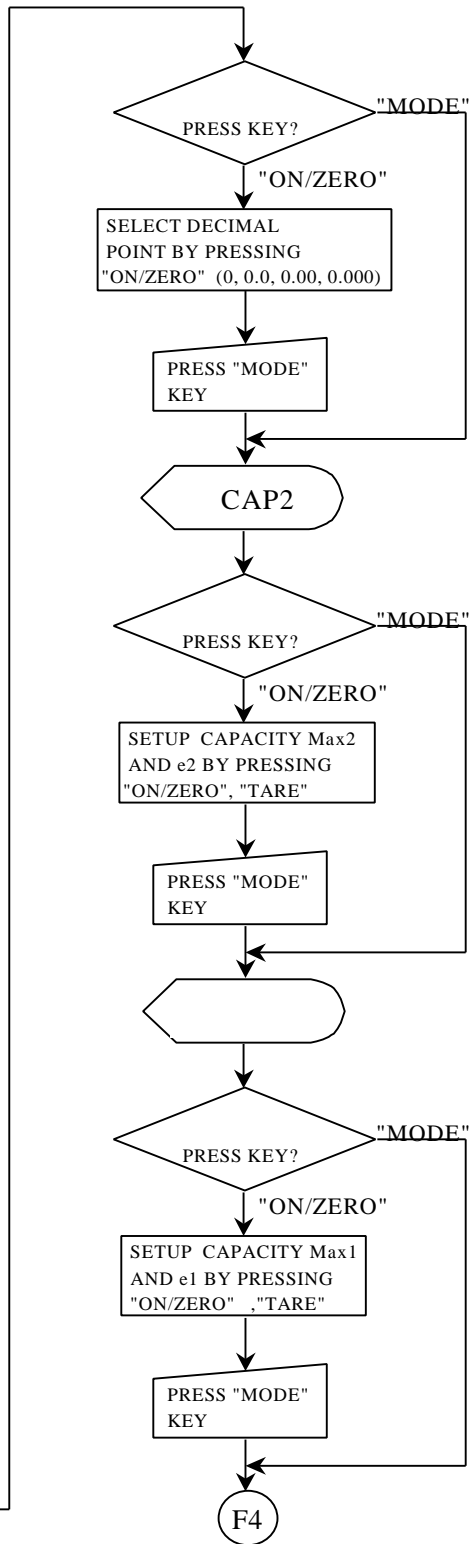

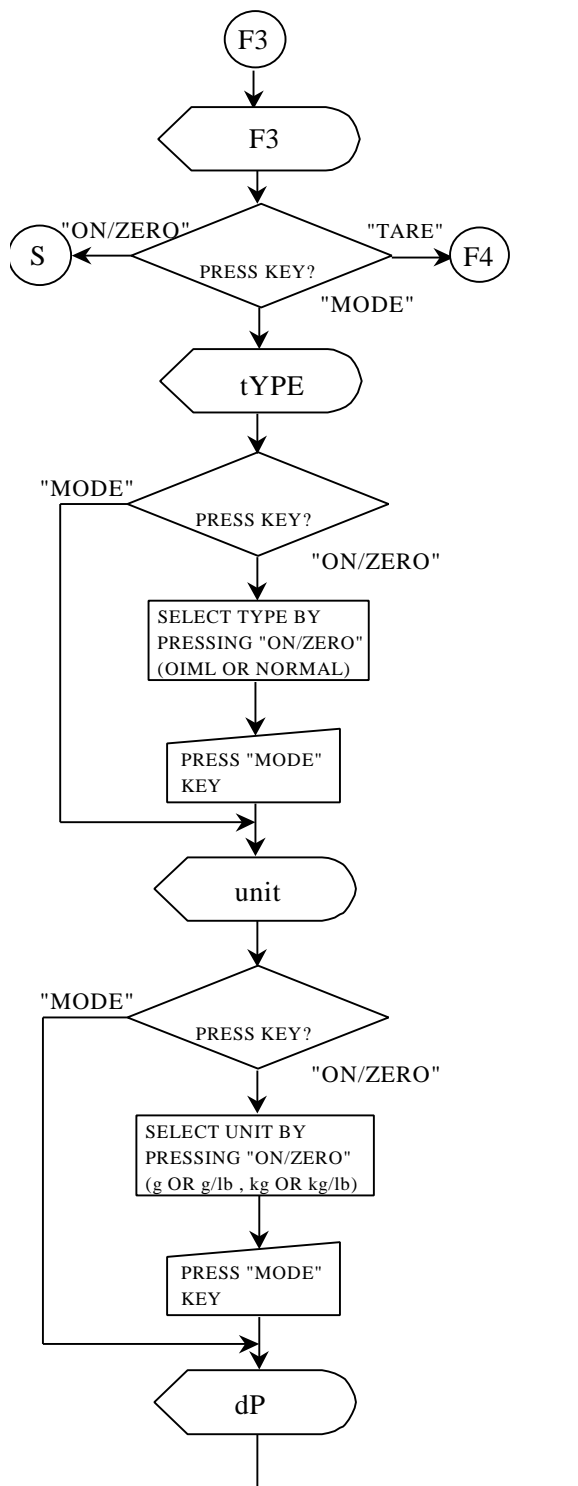

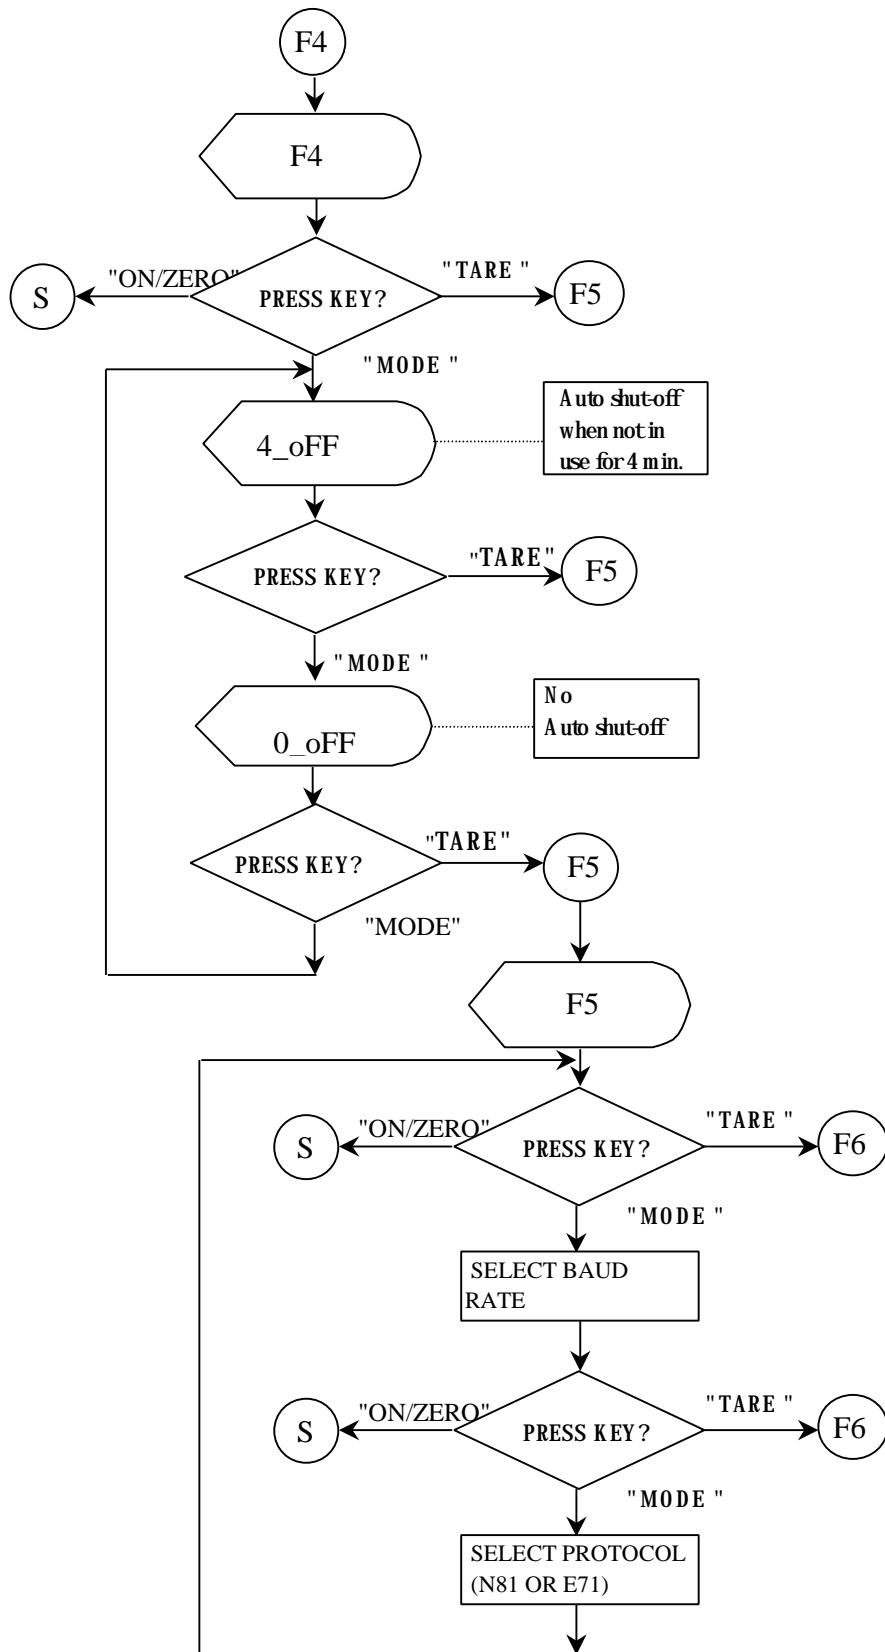

### 2.5.2 Function Test (for technicians only)

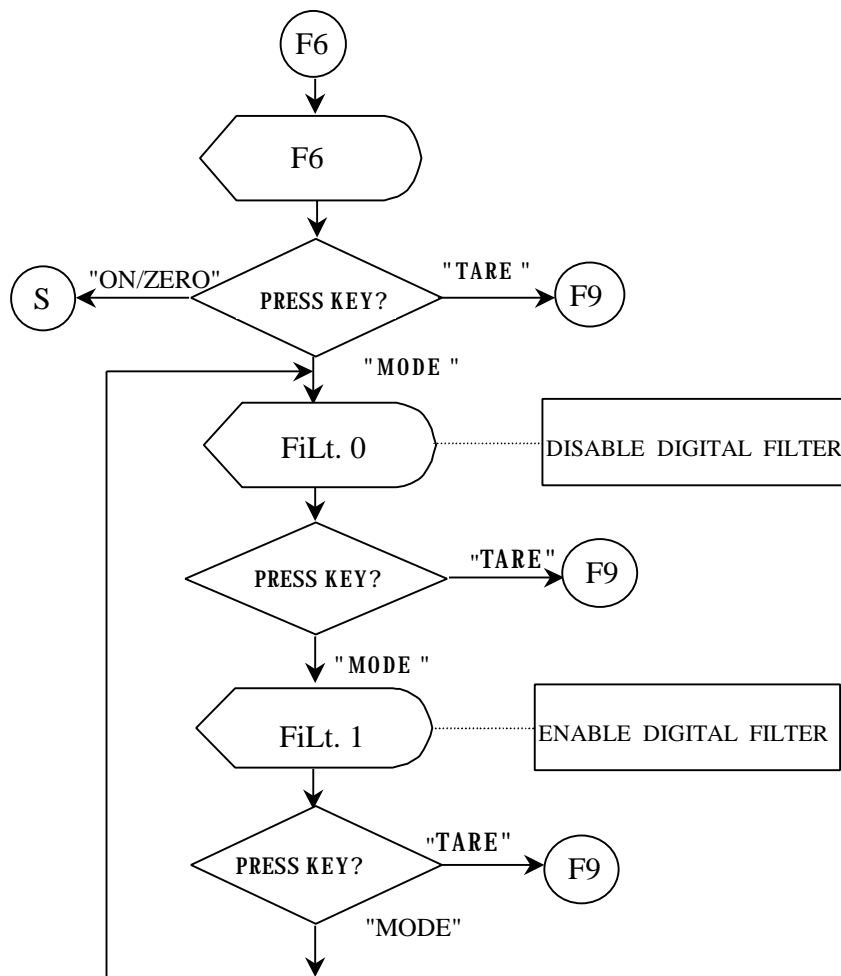

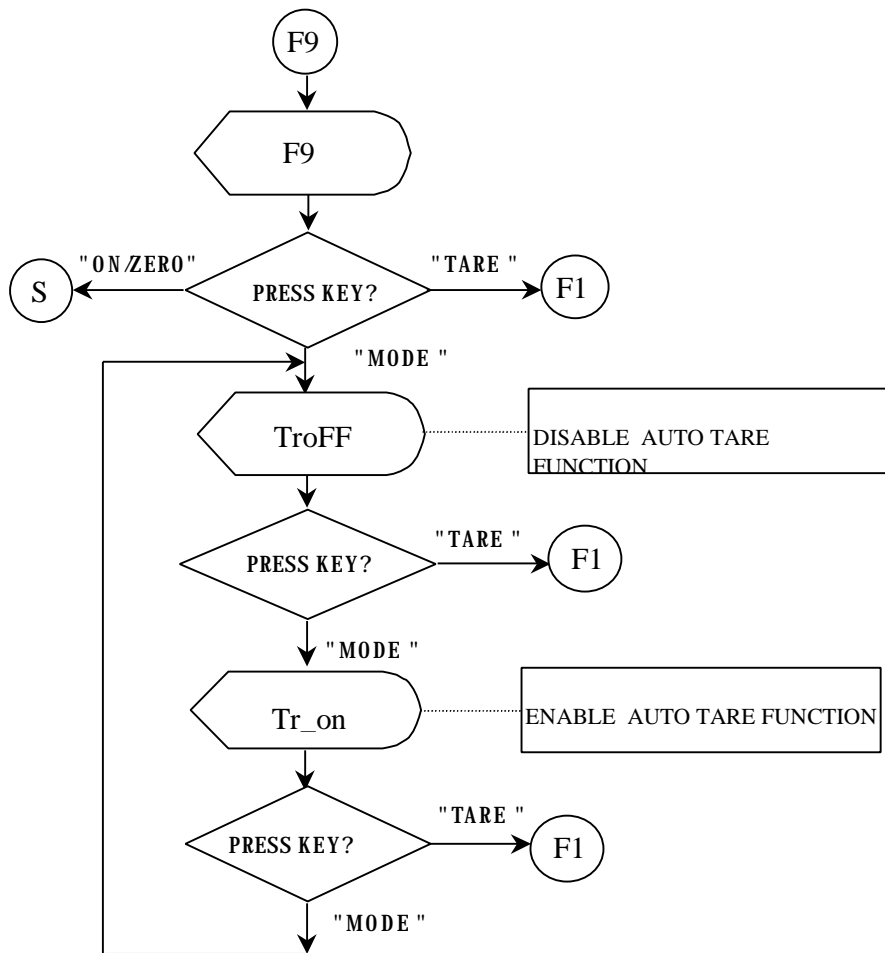

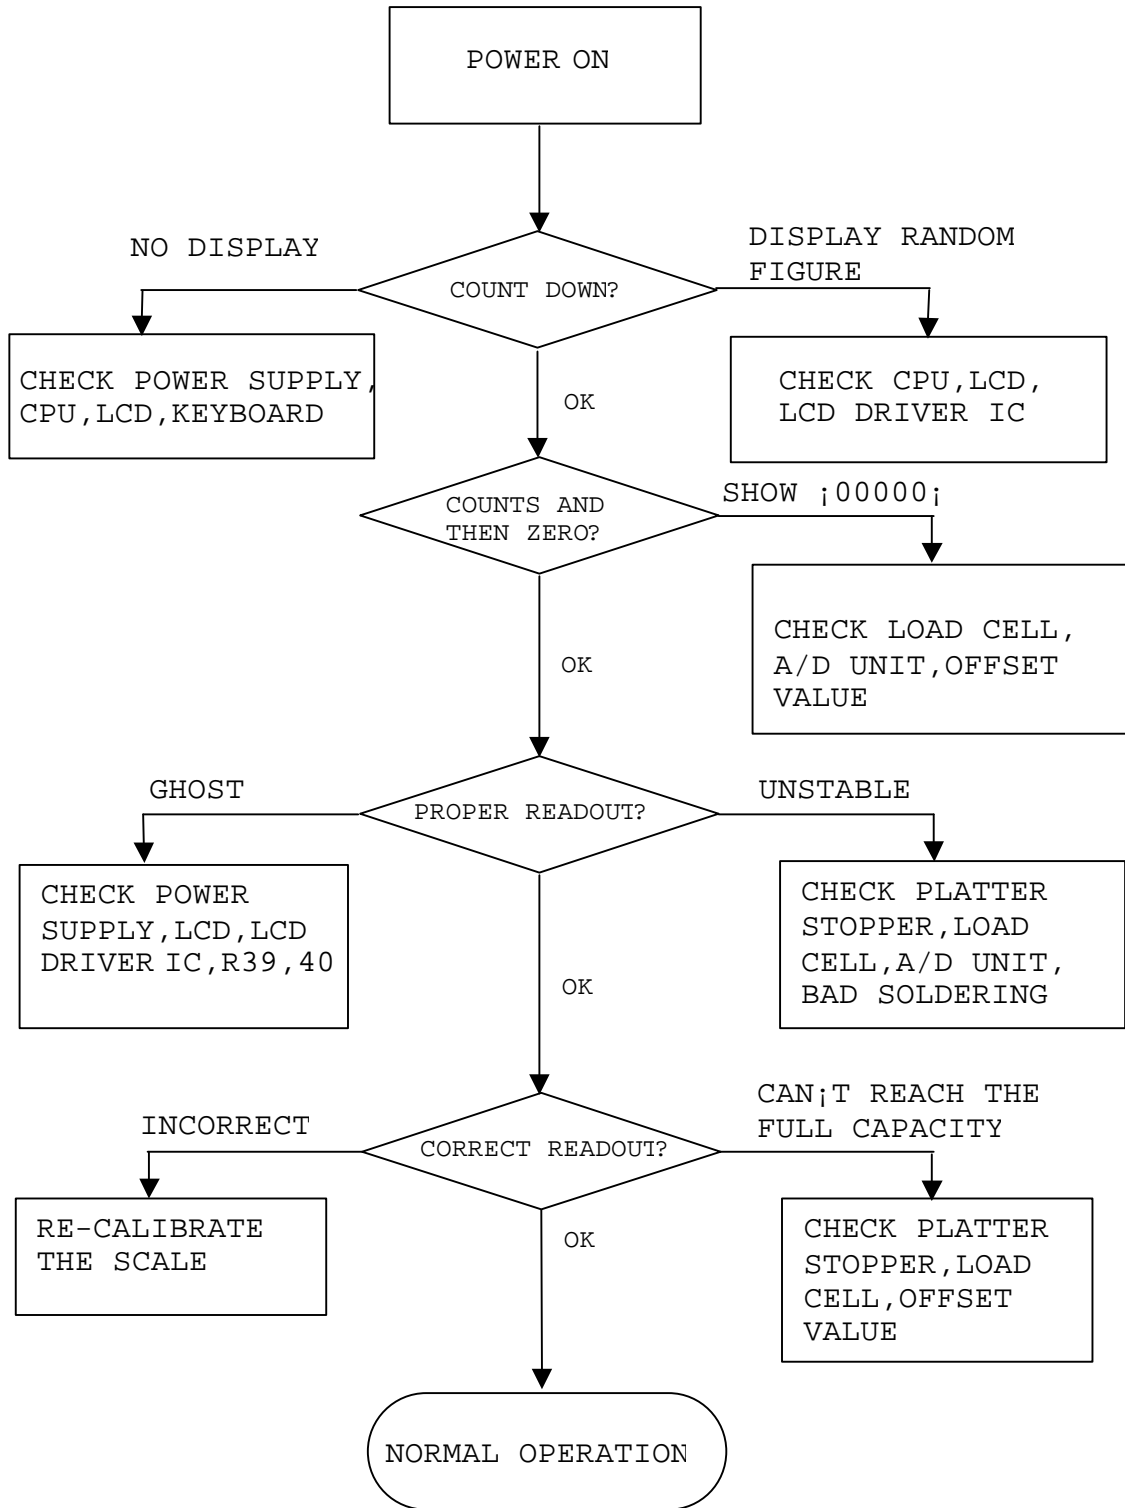

### 3. TROUBLE SHOOTING

#### 3.1 TROUBLE SHOOTING LOOP

## 3.2 PARTS AND COMPONENTS TROUBLE SHOOTING

### 3.2.1 Power Supply Checking

#### 3.2.1.1 Relevant parts:

Main Board (AFW-10-X)

Q4 (A1515)

Q6 (A733)

U11(AIC 1722-5.0)

Q1 (C1061)

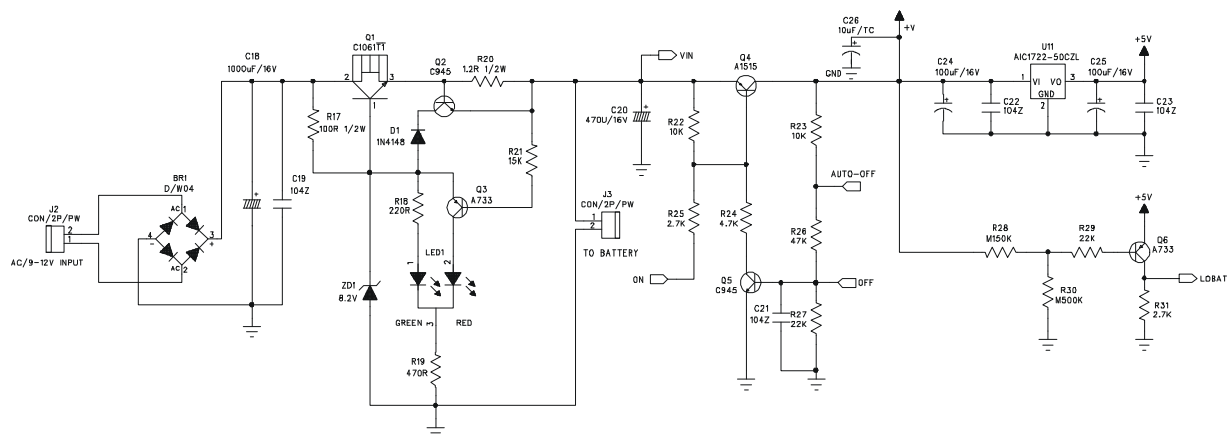

Q2 (C945)

ZD1(ZENER 8.2V)

R20(1.2R 1/2W)

DC JACK

BATTERY(6V 4Ah)

#### Description:

1) Power source: Rechargeable Battery 6V/4Ah or AC adaptor(9V, 500mA)

2) +5V power drives digital circuit system.

U11 (AIC 1722-5.0) is a 5volts Voltage Regulator.

3) +5V power drives analog circuit system.

U4 (AS2950A) is a 5volts Voltage Regulator.

4) Auto-off:

If the scale is set with 4\_off of power-saving function or under LO-BAT situation, after fixed time interval, CPU will release a low potential signal to draw Q5 down, then Q4 cuts off, scale will be shut down immediately.

5) Low Power Detection:

The Q6(A733) is designed to detect the power level. When battery power is less than 5.5V, the collector pole will become high potential, then CPU will instruct LCD display to show LQBAT symbol.

**3.2.1.2 Input voltage: 5.5V or higher**

Check and recharge battery if voltage is less than 5.5V.

**3.2.1.3 System voltage (Vcc): 5V +/- 10%**

Check that the system voltage is within 5V +/- 10%

a) less than 4.5V, the CPU may not work properly.

b) more than 6V, ghost will appear on LCD.

**3.2.2 Platter Stopper Checking**

The platter device shall not touch anything around itself during operation. Check that the platter is not contacted with the upper (no load) and/or lower (with load) stopper.

**3.2.3 LCD Display Checking**

**3.2.3.1** Check that it is soldered and connected properly between LCD and driver IC (PCF8576), driver IC (PCF8576) and CPU.

**3.2.3.2** Check whether LCD is broken.

**3.2.4 CPU Checking**

**3.2.4.1** Check that all pins are seated properly into the socket.

**3.2.4.2** Check that the Crystal Oscillator works.

**3.2.4.3** Check the RESET is normally low.

**3.2.5 A/D Unit Checking**

**3.2.5.1** Check that the +5V powers are correctly fed to the A/D unit.

**3.2.5.2** Check that the signal output of loadcell is normal.

**3.2.5.3** Check OP. Amplifiers & A/D Converter (AD7705).

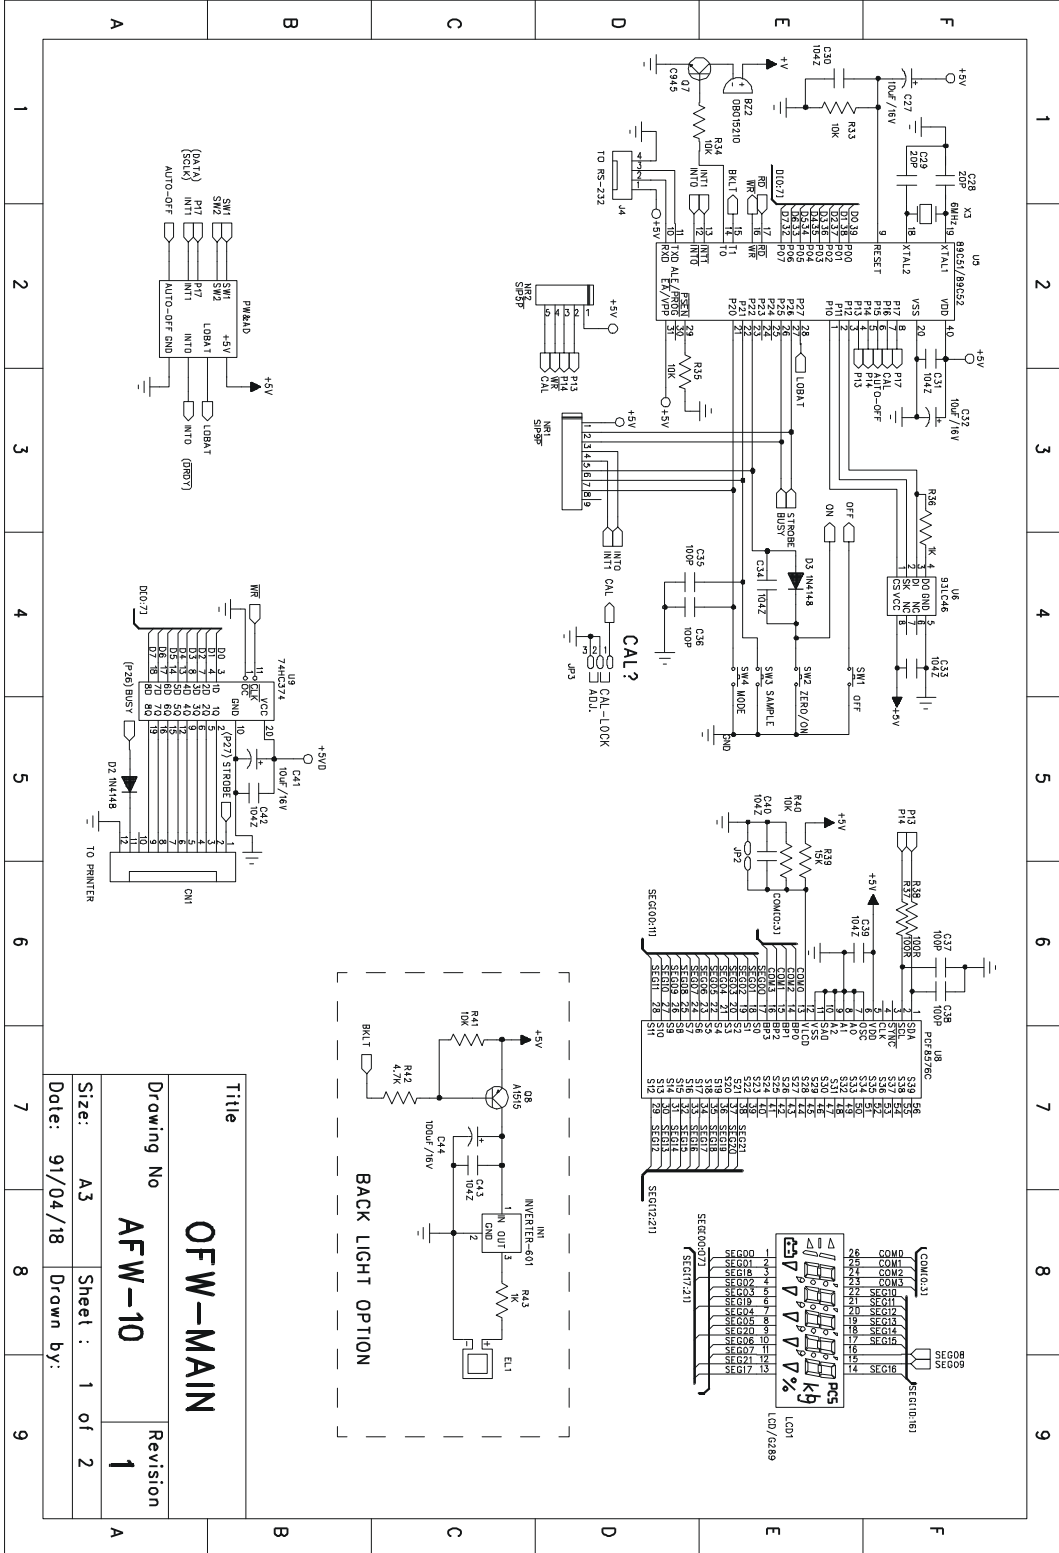

When no error is found with the above checking procedures, the trouble can be caused on the loadcell or the PCB itself. Replace a new one could be better to identify the defective.

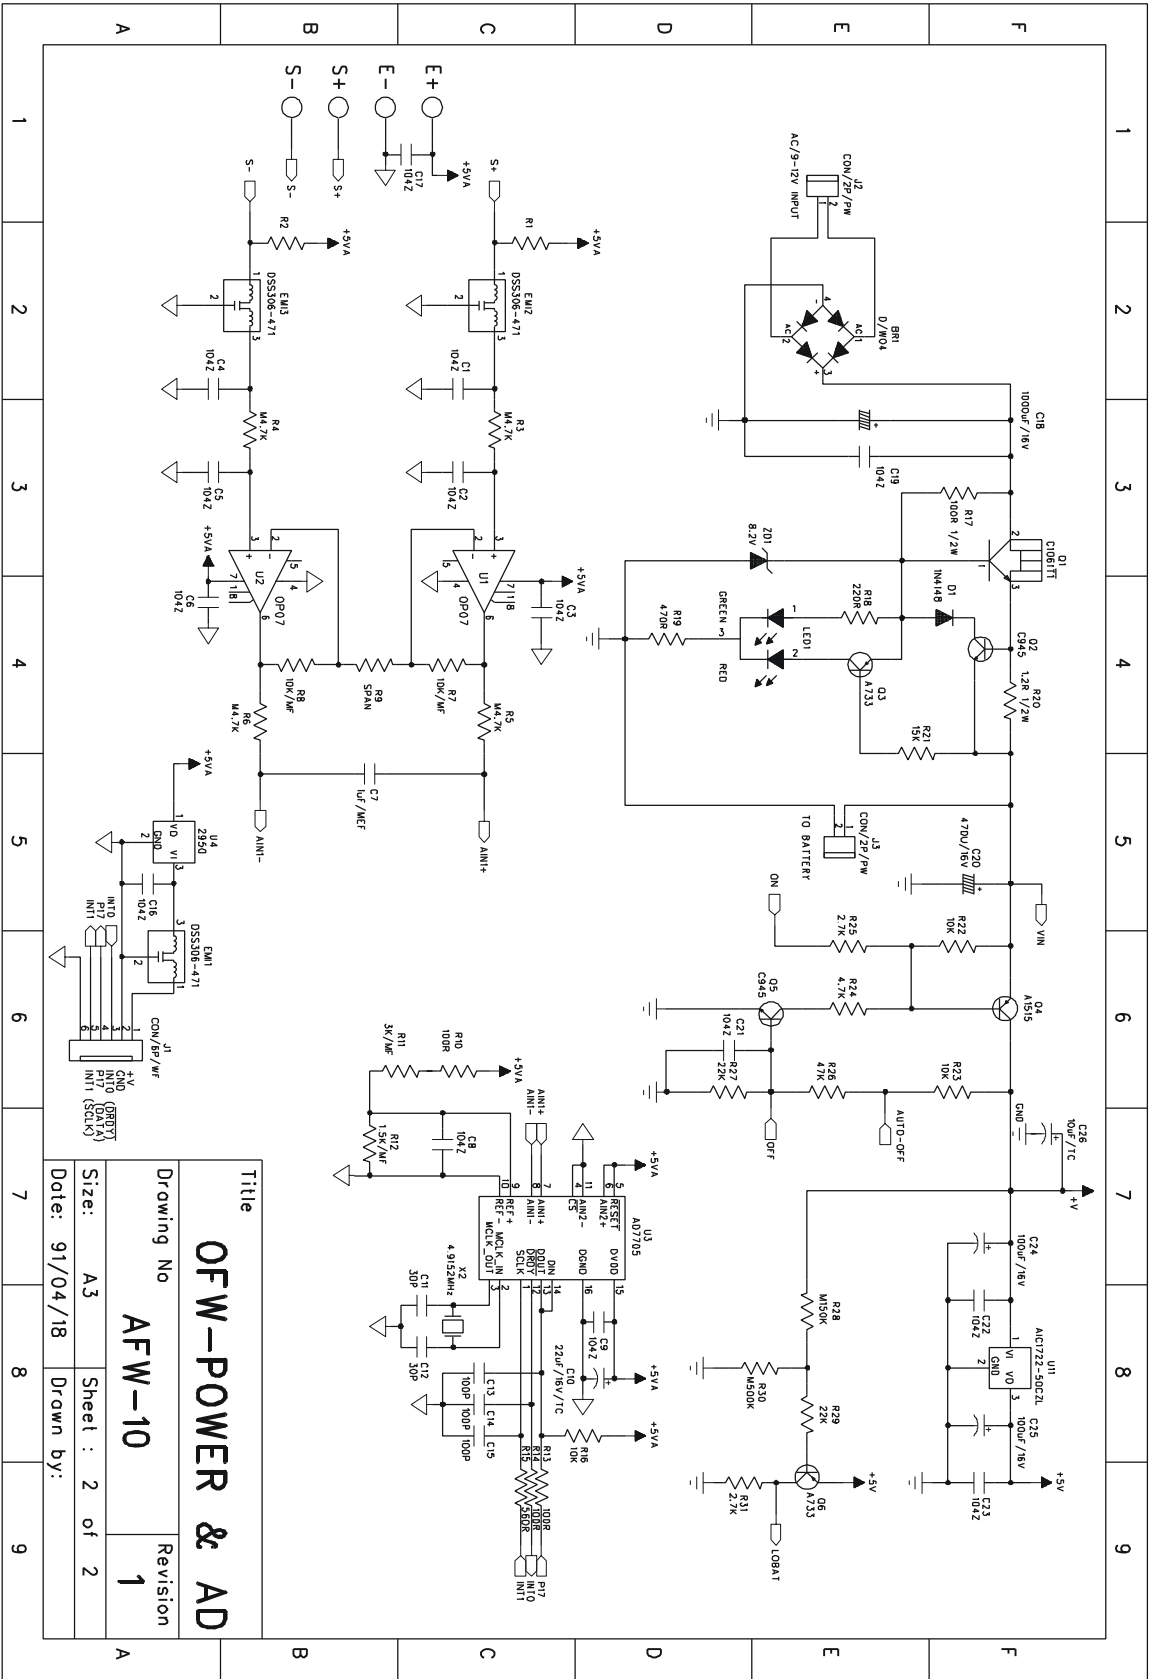

In this way, the readout of weight would be varied because of the output voltage of loadcell and different span value, so recalibration is required after this replacement.

SM8958

8 - Bit Micro-controller

with 32KB flash & 1KB RAM embedded

### Product List

SM8958L25, 25 MHz 32KB internal memory MCU  
 SM8958C25, 25 MHz 32KB internal memory MCU  
 SM8958C40, 40 MHz 32KB internal memory MCU

### Description

The SM8958 series product is an 8-bit single chip micro controller with 32KB flash & 1KB RAM embedded. It is a derivative of the 8052 micro controller family. With its hardware features and powerful instruction set, it's straight forward to make it a versatile and cost effective controller for those applications which demand up to 32 I/O pins for PDIP package or up to 36 I/O pins for PLCC/QFP package, or applications which need up to 32KB memory either for program or for data or mixed. To program the on-chip flash memory, a commercial writer is available to do it in parallel programming method.

### Ordering Information

 SM8958ihhk

yy: year, ww:week  
 v: version identifier [ A, B, ... ]  
 i: process identifier (L=3.0V ~ 3.6V, C=4.5V ~ 5.5V)  
 hh: working clock in MHz (25, 40)  
 k: package type postfix (as below table)

Postfix	Package	Pin/Fad Configuration	Dimension
P	48L PDIP	page 2	page15
J	44L PLCC	page 2	page16
Q	44L QFP	page 2	page17

### Features

- Working voltage: 3.0V ~ 3.6V For L Version  
4.5V ~ 5.5V For C Version
- General 8052 family compatible
- 12 clocks per machine cycle
- 32 KB internal flash memory
- 1024 bytes data RAM
- 3 16 bit timers/counters
- Four 8-bit I/O ports for PDIP package
- Four 8-bit I/O ports + one 4-bit I/O ports for PLCC or QFP package
- Full duplex serial channel
- Bit operation instruction
- Page free jumps
- 8-bit unsigned division
- 8-bit unsigned multiply
- BCD arithmetic operations
- Direct addressing
- Indirect addressing
- Nested interrupts
- Two priority level interrupts
- A serial I/O port
- Power save modes:  
Idle mode and power down mode
- Code protection function
- One watch dog timer (WDT)
- Low EMI (inhibit ALE)

# 3 V/5 V, 1 mW 2-/3-Channel 16-Bit, Sigma-Delta ADCs

## AD7705/AD7706\*

### FEATURES

- AD7705: Two Fully Differential Input Channel ADCs
- AD7706: Three Pseudo Differential Input Channel ADCs
- 16 Bits No Missing Codes
- 0.003% Nonlinearity
- Programmable Gain Front End
- Gains from 1 to 128
- Three-Wire Serial Interface
- SPI™, QSPI™, MICROWIRE™ and DSP Compatible
- Schmitt Trigger Input on SCLK
- Ability to Buffer the Analog Input
- 2.7 V to 3.3 V or 4.75 V to 5.25 V Operation
- Power Dissipation 1 mW max @ 3 V
- Standby Current 8  $\mu$ A max
- 16-Lead DIP, 16-Lead SOIC and TSSOP Packages

### GENERAL DESCRIPTION

The AD7705/AD7706 are complete analog front ends for low frequency measurement applications. These two-/three-channel devices can accept low level input signals directly from a transducer and produce a serial digital output. They employ a sigma-delta conversion technique to realize up to 16 bits of no missing codes performance. The selected input signal is applied to a proprietary programmable gain front end based around an analog modulator. The modulator output is processed by an on-chip digital filter. The first notch of this digital filter can be programmed via an on-chip control register allowing adjustment of the filter cutoff and output update rate.

The AD7705/AD7706 operate from a single 2.7 V to 3.3 V or 4.75 V to 5.25 V supply. The AD7705 features two fully differential analog input channels while the AD7706 features three pseudo differential input channels. Both devices feature a differential reference input. Input signal ranges of 0 mV to +20 mV through 0 V to +2.5 V can be incorporated on both devices when operating with a  $V_{DD}$  of 5 V and a reference of 2.5 V. They can also handle bipolar input signal ranges of  $\pm 20$  mV through  $\pm 2.5$  V, which are referenced to the AIN(-) inputs on the AD7705 and to the COMMON input on the AD7706. The AD7705/AD7706, with 3 V supply and a 1.225 V reference, can handle unipolar input signal ranges of 0 mV to +10 mV through 0 V to +1.225 V. Its bipolar input signal ranges are  $\pm 10$  mV through  $\pm 1.225$  V. The AD7705/AD7706 thus perform all signal conditioning and conversion for a two- or three-channel system.

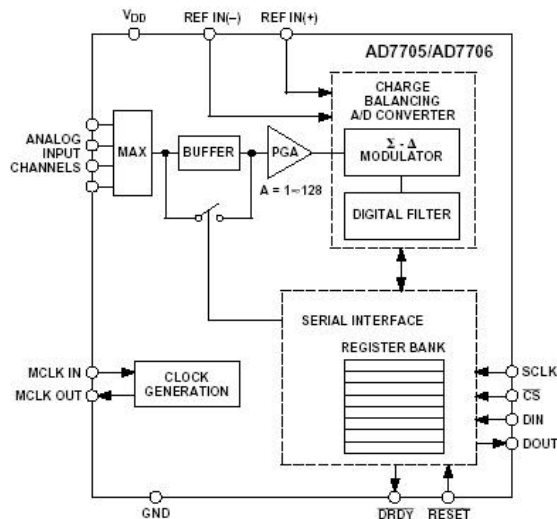

The AD7705/AD7706 are ideal for use in smart, microcontroller or DSP-based systems. They feature a serial interface that can be configured for three-wire operation. Gain settings, signal polarity and update rate selection can be configured in software

\*Protected by U.S. Patent Number 5,134,401.  
SPI and QSPI are trademarks of Motorola, Inc.  
MICROWIRE is a trademark of National Semiconductor.

### REV. A

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices.

### FUNCTIONAL BLOCK DIAGRAM

using the input serial port. The part contains self-calibration and system calibration options to eliminate gain and offset errors on the part itself or in the system.

CMOS construction ensures very low power dissipation, and the power-down mode reduces the standby power consumption to 20  $\mu$ W typ. These parts are available in a 16-lead, 0.3 inch-wide, plastic dual-in-line package (DIP), a 16-lead wide body (0.3 inch) small outline (SOIC) package and also a low profile 16-lead TSSOP.

### PRODUCT HIGHLIGHTS

1. The AD7705/AD7706 consumes less than 1 mW at 3 V supplies and 1 MHz master clock, making it ideal for use in low power systems. Standby current is less than 8  $\mu$ A.
2. The programmable gain input allows the AD7705/AD7706 to accept input signals directly from a strain gage or transducer, removing a considerable amount of signal conditioning.
3. The AD7705/AD7706 is ideal for microcontroller or DSP processor applications with a three-wire serial interface reducing the number of interconnect lines and reducing the number of opto-couplers required in isolated systems.
4. The part features excellent static performance specifications with 16 bits, no missing codes,  $\pm 0.003\%$  accuracy and low rms noise ( $< 600$  nV). Endpoint errors and the effects of temperature drift are eliminated by on-chip calibration options, which remove zero-scale and full-scale errors.

## Universal LCD driver for low multiplex rates

PCF8576

## 1 FEATURES

- Single-chip LCD controller/driver
- Selectable backplane drive configuration: static or 2/3/4 backplane multiplexing
- Selectable display bias configuration: static, 1/2 or 1/3
- Internal LCD bias generation with voltage-follower buffers
- 40 segment drives: up to twenty 8-segment numeric characters; up to ten 15-segment alphanumeric characters; or any graphics of up to 160 elements
- 40 × 4-bit RAM for display data storage
- Auto-incremented display data loading across device subaddress boundaries
- Display memory bank switching in static and duplex drive modes
- Versatile blinking modes
- LCD and logic supplies may be separated
- Wide power supply range: from 2 V for low-threshold LCDs and up to 9 V for guest-host LCDs and high-threshold (automobile) twisted nematic LCDs
- Low power consumption
- Power-saving mode for extremely low power consumption in battery-operated and telephone applications
- I<sup>2</sup>C-bus interface
- TTL/CMOS compatible
- Compatible with any 4-bit, 8-bit or 16-bit microprocessors/microcontrollers

- May be cascaded for large LCD applications (up to 2560 segments possible)
- Cascadable with 24-segment LCD driver PCF8566
- Optimized pinning for plane wiring in both single and multiple PCF8576 applications
- Space-saving 56-lead plastic very small outline package (VSO56)
- Very low external component count (at most one resistor, even in multiple device applications)
- Compatible with chip-on-glass technology
- Manufactured in silicon gate CMOS process.

## 2 GENERAL DESCRIPTION

The PCF8576 is a peripheral device which interfaces to almost any Liquid Crystal Display (LCD) with low multiplex rates. It generates the drive signals for any static or multiplexed LCD containing up to four backplanes and up to 40 segments and can easily be cascaded for larger LCD applications. The PCF8576 is compatible with most microprocessors/microcontrollers and communicates via a two-line bidirectional I<sup>2</sup>C-bus. Communication overheads are minimized by a display RAM with auto-incremented addressing, by hardware subaddressing and by display memory switching (static and duplex drive modes).
