TEST STATION
ELITE TEST SYSTEM

- 30 volt test
- Built in VTR Technology
- Tests both wrist straps and footwear
- Displays actual test resistance
- Network Capabilities
- HID and barcode reading
- Adjustable black stand
- Molded foot plate

- ELITE Test Station w/Footplate**

- B88100** ELITE Enterprise Software
B88110 ELITE Wi-Fi Module

What happens if a worker grabs some equipment that is close to failure, tests and passes then heads out to the work area and fails on the line? Well that sounds like a costly oversight. Thankfully, these issues can now be avoided. Botron has developed a new test system, the ELITE, which can prevent those costly latent failures. Latency is the biggest problem in the ESD Industry. With the ELITE you have full control. Not only can its users test parameters be set internally, with our patented VTR Technology you can also set a preventative fixed test limit that informs both the worker and supervisor of equipment in danger of failure. Thus, avoiding latent failures.

Take full control of your facility with the ELITE test system. Customize each users test requirements (stores over 100k users), adjust test parameters, adjustable failure threshold (Failure Prevention Mode). The ELITE, unlike other data logging systems, is not computer dependant and will not lose data if the computer or power goes down.

TEST STATION
DUAL & COMBO

Features: The B82450 Combo Test Station is made of the same high grade powered coated steel frame as the B82250. Standard equipment includes a single, solid aluminum foot plate and B8211 tester (see p.22). This combo test station will verify both wrist straps and footwear.

- 9 Volt Test
- Tests wrist straps
- Tests footwear
- Wrist strap - 750k - 10Meg
- Footwear - 750k - 100Meg
- Powder coated steel frame
- Solid aluminum foot plate

- Combo Test Station**
B82450 Combo Tester w/ Stand
B82452 Replacement plate 15" x 18"
B82451 Combo Tester & 7" x 18" plate

Features: Botron's Deluxe Dual Test Station features a sleek adjustable black frame and molded foot plate. Wires simply slip into the frame and are hidden and kept safe from snagging and interference. With the new dual tester, personnel can verify wrist straps and any type of footwear ranging from heel grounders to conductive shoes.

- 9 Volt Test
- Tests both right and left foot
- Wrist strap - 750k - 12Meg
- Footwear - 750k - 120Meg
- Hidden cord construction
- Molded foot plate
- Adjustable black frame

- Deluxe Test Station**
B8525 Deluxe Dual Test Station

- 30 volt test
- Built in VTR Technology
- Tests both wrist straps and footwear
- Displays actual test resistance
- Network Capabilities
- HID and barcode reading
- Molded foot plate

- ELITE Wall Mount System w/Footplate**
