Compressed air meter DN 15-50

testo 6451
testo 6452
testo 6453
testo 6454

Fits all common pipe diameters DN 15 / 25 / 40 / 50

Four measurement parameters in one instrument:
Flow-through, totalizer, temperature, operating pressure

Direct compressed air monitoring with simultaneous display
of three measurement values thanks to TFT display as
standard

Best system integration thanks to two analog outputs
4 to 20 mA

Highest measurement accuracy, integrated measurement
section avoids measurement errors

Easy and cost-effective installation

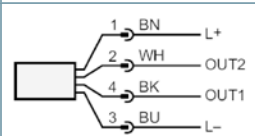

In industrial companies, compressed air is an important source of energy which incurs high consumption costs. Testo compressed air meters allow a highly accurate measurement of compressed air consumption, enabling energy-saving potential to be identified and costs lowered. The compressed air meters can also be used for the targeted implementation of environmental management – e.g. according to ISO 50.001 or ISO 14.001. A further area of application is leakage monitoring in a compressed air system. The compressed air meter can also be used to carry out a peak load analysis in order to

determine whether compressed air of sufficient capacity is being generated. The newly developed “all-in-one sensor” records not only the compressed air consumption and the temperature, but also the pressure, eliminating the need for a separate pressure measurement.

The compressed air meters from the testo 645X family use the calorimetric measurement principle, making any additional pressure and temperature measurement superfluous, and which is not subject to wear on moving parts.
