Overview

This guide covers the OneLINK™ Bridge AV Interface, which is available in the following kit configurations for use with Vaddio or third-party cameras, with or without third-party codecs.

- 999-9595-000/001/009, OneLINK Bridge AV interface
- 999-9620-000/001/009, OneLINK Bridge AV interface for Polycom EagleEye IV cameras with Polycom codecs
- 999-9630-000/001/009, OneLINK Bridge AV interface for Sony and Panasonic cameras
- 999-9560-000/001/009, OneLINK Bridge AV interface for RoboSHOT HDMI cameras with Polycom codecs
- 999-9645-000/001/009, OneLINK Bridge AV interface for Vaddio HDBaseT cameras with Polycom codecs
- 999-9660-000/001/009, OneLINK Bridge AV interface for Cisco cameras with Cisco codecs
- 999-9670-000/001/009, OneLINK Bridge AV interface for RoboSHOT HDMI cameras with Cisco codecs
- 999-9675-000/001/009, OneLINK Bridge AV interface for Vaddio HDBaseT cameras with Cisco codecs
- 999-9690-000/001, OneLINK Bridge AV interface for RoboSHOT HDMI cameras

The OneLINK Bridge AV interface is also available as a component of several Vaddio camera systems. Part number suffixes indicate power cord set types. Those ending in -000 include cord sets for use in North America; -001 kits include cord sets for use in Europe and the UK; -009 kits include cord sets for use in Australia and New Zealand.

If the camera extension is sold for use with an HDMI camera, it is shipped with a OneLINK EZCamera Interface Module (EZIM).
What’s in this Guide

This guide provides information about:
- Unpacking
- Physical features
- Installation
- Configuration and system administration
- Telnet API for third-party control
- Specifications
- Troubleshooting and maintenance
- Warranty

For your convenience, most of this information is also available in smaller, limited-purpose manuals:
- **Installation Guide for the OneLINK Bridge AV Interface** – Unpacking, physical features, installation, and initial power-on.
- **Configuration and Administration Guide for the OneLINK Bridge AV Interface** – Physical features, web interface for device configuration and system administration, and troubleshooting.

Download manuals, dimensional drawings, and other information from [support.vaddio.com](http://support.vaddio.com).

Features

- Converts any conference room to a BYOD environment, delivering a USB stream for soft-conferencing clients
- Incorporates Vaddio’s market-leading AV Bridge functionality, connecting professional AV equipment to PC applications via USB 3.0 media stream
- Video with audio: Simultaneous uncompressed USB 3.0, HDMI 1.4b, and 3Gb/s HD-SDI; passes IP stream if available from source
- Two balanced audio inputs, line level or mic level; two balanced audio outputs, line level
- Control via web interface or Telnet; passes web-based, Telnet, and RS-232 serial control to connected devices
- Simple, clutter-free camera installation – power, control, video, and streaming over one Cat-5e or better cable
- Extends installation distance for HDMI and HDBaseT™ cameras up to 100 m (328 ft.)
- Compatible with Vaddio HDBaseT cameras – no EZCamera Interface Module (EZIM) needed
- Compatible with Vaddio and other HDMI cameras
- Available in system configurations with Vaddio cameras
- Kits available for use with Polycom and Cisco codecs and other HDMI cameras
Unpacking the OneLINK Bridge AV Interface

Make sure you received all the items you expected. Here are the packing lists for the OneLINK Bridge kits. Every OneLINK device ships with a power supply and at least one AC cord set. The last three digits of the kit part number contain the regional code that specifies which cord set(s). For most OneLINK kits, the part numbers follow this convention:

- Kits with part numbers ending in -000 include one AC cord set for North America.
- Kits with part numbers ending in -001 include two AC cord sets, one for Europe and one for the UK.
- Kits with part numbers ending in -009 include one AC cord set for Australia and New Zealand.

OneLINK Bridge for HDBaseT Cameras

OneLINK Bridge AV Interface for Vaddio HDBaseT Cameras, 999-9595-000/001/009

Camera not included.
- OneLINK Bridge AV interface
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm, qty. 4
- EZCamera RS-232 control adapter (998-1001-232)
- Quick-Start Guide 411-0009-01

OneLINK Bridge for HDBaseT Cameras Used with Codecs

OneLINK Bridge for Vaddio HDBaseT Cameras with Polycom Codecs, 999-9645-000/001/009

Camera and codec not included.
- OneLINK Bridge AV interface
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm (qty. 4)
- Fan-out cable, codec side, 2 ft. (0.6 m)
- EZCamera RS-232 control adapter 998-1001-232
- Quick-Start Guide 411-0009-01
OneLINK Bridge for Vaddio HDBaseT Cameras with Cisco Codecs, 999-9675-000/001/009

Camera and codec not included.

Note
If connecting to a Cisco SX20 codec, you will need to provide a Cisco split cable, Cisco part number CAB-PHD4XS2-SPLIT.

- OneLINK Bridge AV interface
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm (qty. 4)
- HDMI cable, 3 ft. (0.9 m)
- Custom-pinout Cat-5e cable for Cisco, 3 ft. (0.9 m)
- Cat-5e patch cable, 3 ft. (0.9 m)
- EZCamera RS-232 control adapter 998-1002-232
- Quick-Start Guide 411-0009-01

OneLINK Bridge For HDMI Cameras

OneLINK Bridge for RoboSHOT HDMI Cameras, 999-9690-000/001/009

Camera not included.

- OneLINK Bridge AV interface
- OneLINK EZCamera Interface Module (EZIM) with mounting screws
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm, qty. 4
- Power cable EIAJ-04 to EIAJ-04, 1 ft. (0.3 m)
- HDMI cable, 1 ft. (0.3 m)
- Cat-5e patch cable, 1 ft. (0.3 m), qty. 2
- EZCamera RS-232 control adapter
- Quick-Start Guide 411-0009-02

OneLINK Bridge for Sony and Panasonic Cameras, 999-9630-000/001/009

Camera not included.

- OneLINK Bridge AV interface
- OneLINK EZCamera Interface Module (EZIM)
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm, qty. 4
- Wall mount with mounting hardware for Sony and Panasonic cameras
- Power cable EIAJ-04 to EIAJ-04, 1 ft. (0.3 m)
- Power cable EIAJ-04 to 3x6.3mm, 1 ft. (0.3 m)
- HDMI cable, 1 ft. (0.3 m)
- RJ-45 to 8-pin mini-DIN cable, 1 ft. (0.3 m)
- Cat-5e patch cable, 1 ft. (0.3 m)
- Quick-Start Guide 411-0009-02
OneLINK Bridge For HDMI Cameras Used with Codecs

OneLINK Bridge for Polycom Cameras with Polycom Codecs, 999-9620-000/001/009

Camera and codec not included.
- OneLINK Bridge AV Interface
- OneLINK EZCamera Interface Module (EZIM)
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- Wall mount with mounting hardware for Polycom codec and camera
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm, qty. 4
- Fan-out cable, EZIM side, 1 ft. (0.3 m)
- Fan-out cable, codec side, 2 ft. (0.6 m)
- EZCamera RS-232 control adapter 998-1001-232
- Quick-Start Guide 411-0009-02

OneLINK Bridge for RoboSHOT HDMI with Polycom Codecs, 999-9640-000/001/009

Camera and codec not included.
- OneLINK Bridge AV interface
- OneLINK EZCamera Interface Module (EZIM)
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm, qty. 4
- Fan-out cable, codec side, 2 ft. (0.6 m)
- Cat-5e patch cable, 1 ft. (0.3 m), qty. 2
- HDMI cable, 1 ft. (0.3 m)
- Power cable EIAJ-04 to EIAJ-04, 1 ft. (0.3 m)
- Quick-Start Guide 411-0009-02
OneLINK Bridge for Cisco Cameras with Cisco Codecs, 999-9660-000/001/009

Camera and codec not included.

**Note**

If connecting to a Cisco SX20 codec, you will need to provide a Cisco split cable, Cisco part number CAB-PHD4XS2-SPLIT. This cable is also required when connecting to a Cisco Precision 40 or Precision HD 1080p2.5x camera; you will need two of them if connecting one of these cameras and an SX20 codec.

- OneLINK Bridge AV Interface
- OneLINK EZCamera Interface Module (EZIM) with mounting screws
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- Wall mount with mounting hardware for Cisco codec and camera
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm, qty. 4
- Power cable EIAJ-04 to 5.5x2.1 mm, 1 ft. (0.3 m)
- HDMI cable, 1 ft. (0.3 m)
- HDMI cable, 3 ft. (0.9 m)
- Custom-pinout Cat-5e cable for Cisco cameras, 1 ft. (0.3 m)
- Custom-pinout Cat-5e cable for Cisco SX20, 3 ft. (0.9 m)
- Cat-5e patch cable, 1 ft. (0.3 m)
- Cat-5e patch cable, 3 ft. (0.9 m)
- EZCamera RS-232 control adapter 998-1002-232
- Quick-Start Guide 411-0009-02

OneLINK Bridge for RoboSHOT HDMI with Cisco Codecs, 999-9670-000

Camera and codec not included.

**Note**

If connecting to a Cisco SX20 codec, you will need to provide a Cisco split cable, Cisco part number CAB-PHD4XS2-SPLIT.

- OneLINK Bridge AV Interface
- OneLINK EZCamera Interface Module (EZIM) with mounting screws
- Power supply, 48 VDC/1.36 A, with AC cord set(s)
- USB 3.0 A to B cable, 6 ft. (1.8 m)
- 3-position Phoenix connector plug, 3.5 mm, qty. 4
- Power cable EIAJ-04 to EIAJ-04, 1 ft. (0.3 m)
- HDMI cable, 1 ft. (0.3 m)
- HDMI cable, 3 ft (0.9 m)
- Custom-pinout Cat-5e cable for Cisco, 3 ft. (0.9 m)
- Cat-5e patch cable, 1 ft. (0.3 m), qty. 2
- Cat-5e patch cable, 3 ft. (0.9 m)
- EZCamera RS-232 control adapter 998-1002-232
- Quick-Start Guide
A Quick Look at the OneLINK Device

This section covers the physical features of the OneLINK Bridge AV interface. All OneLINK kits include a receiver, which is typically co-located with other equipment, up to 328 ft (100 m) away from the camera. OneLINK kits for use with HDMI cameras also include an EZCamera Interface Module (EZIM) HDBaseT converter, which is mounted adjacent to the camera.

Front Panel of the Receiver

- **USB** indicator – Illuminates when a USB stream is present.
- **Network** indicator – Illuminates when connected to the IP network.
- **Source** indicator – Illuminates when a video input is detected.
- **OneLINK** indicator – Illuminates when the OneLINK Bridge detects a connection to an HDBaseT device or to the OneLINK EZIM.
- **Display IP and MAC Address** button (illuminated blue) – Outputs the OneLINK Bridge IP and MAC addresses as an overlay on the HDMI, HD-SDI, and USB video outputs.
- **Power System Reset** button (illuminated red) – Reboots the OneLINK Bridge without affecting the connected camera.

**Note**
The OneLINK device does not control the camera; it passes IP and RS-232 traffic to and from the camera. Use the camera’s IP address to access the camera’s web interface. The OneLINK device’s IP address only provides access to the OneLINK device, not to the connected camera.

**Note**
To discover the attached Vaddio camera’s IP address, point the IR Remote Commander at the camera and press the Data Screen button. The camera’s IP and MAC addresses are displayed on the connected HDMI video output.
Connector Panel of the Receiver

From the left:

- **Power input jack** – Use the supplied 48VDC, 1.36A power supply.
- **OneLINK interface port** – Connect a Cat-5e (or better) cable to the EZIM, or to the camera if your OneLINK kit or system did not include an EZIM. This bidirectional connection carries video, audio (if available), network connectivity including H.264 IP streaming from the camera (if available), RS-232 control, and 12 VDC power.
- **HDMI output** – HDMI output to a connected display.
- **USB 3.0** – Uncompressed video output with PCM audio for conferencing applications
- **HD-SDI** – Video output from the camera
- **Network port** – H.264 IP streaming (if available from the camera), web interface access, and third-party IP control via Telnet API.
- **RS-232 port** – Connect to a camera controller.
- **Audio I/O Line Out 1 and Line Out 2** – Far-end audio from conferencing application or as configured in the audio matrix
- **Audio I/O Mic/Line In 1 and Mic/Line In 2** – Microphone or other audio inputs
Connector Panel of the EZCamera Interface Module (EZIM)

If the OneLINK device is used with an HDMI camera, the EZIM is required.

From the left:
- **Power output jack** – Supplies power to the camera. The kit you purchased includes the appropriate cable to connect your camera's power input to this jack.
- **Network port** – Provides network connectivity to the camera for H.264 IP streaming (if available from the camera), web interface access, and third-party control via Telnet API. Connect to the camera's network port.
- **RS-232 port** – Provides RS-232 connectivity to the camera, for third-party control. The kit you purchased may include a cable and/or an RS-232 adapter to connect to the camera's RS-232 port.
- **HDMI input** – Receives HDMI video from the camera. Connect to the camera's HDMI output.
- **OneLINK port** – Single-cable connection to the OneLINK receiver. This bidirectional connection carries all video, power, and control.

*Note*
Cat-6 or Cat-7 cabling may provide better performance in noisier RF or EMF environments. When in doubt, use shielded Cat-6 cable. **Cable distance between the EZIM and the OneLINK device is a maximum of 328 feet (100 m).**
Installing the OneLINK Device

This section covers:
- Things to know before you start the installation
- Basic connection examples

Rack mounting brackets are available for the OneLINK receiver.

Don’t Void Your Warranty!

Caution
Use only the power supply included with this product. Using a different one will void the warranty, and could create unsafe operating conditions or damage the product.

Do not connect the OneLINK power supply to a camera. It does not provide the correct voltage for Vaddio cameras, and will damage the camera and void the camera’s warranty.

This product is for indoor use only. Do not install it outdoors or in a humid environment. Do not allow it to come into contact with any liquid.

Do not install or operate this product if it has been dropped, damaged, or exposed to liquids. If any of these things happen, return it to Vaddio for safety and functional testing.

All information about this product is available for download at www.vaddio.com/support – no cost, no registration required.

Cabling Notes

Cat-6 or Cat-7 cabling may provide better performance in noisier RF or EMF environments. When in doubt, use shielded Cat-6 cable. Cable distance between the EZIM and the OneLINK device is a maximum of 328 feet (100 m).

Note
Use standard RJ-45 connectors and a good crimping tool. Do not use pass-through RJ-45 connectors. Poorly crimped connectors can damage the connectors on the product, cause intermittent connections, and degrade signal quality. Test cable pin-outs and continuity before connecting them.

**Intact** – Contact fingers will make reliable contact with the cable connector

**Damaged** – Some contact fingers are bent and will NOT make reliable contact with the cable connector

**Pro Tip**
To prevent tragic mishaps, label both ends of every cable.
Mounting the OneLINK Device

If you are installing the OneLINK device with a OneLINK EZIM, mount the EZIM with or near the camera. Most Vaddio Thin Profile Wall Mounts include two mounting holes to attach the EZIM to the underside of the mount using two 6-32 screws. Connect all required cables during camera installation.

Rack and under-table mounting kits are available for the receiver. Follow the mounting instructions supplied with the kit.

RS-232 Connector Pin-Outs

OneLINK Receiver - RS-232 Control Port
1. Unused
2. Unused
3. Unused
4. Unused
5. Unused
6. GND – green
7. RX (from TX of controller) – brown/white
8. TX (to RX of controller) – brown

OneLINK EZIM - RS-232 Control Port
1. Unused
2. Unused
3. Unused
4. IR GND
5. IR (non-mod)
6. GND – green
7. TX (to RX of camera) – brown/white
8. RX (from TX of camera) – brown

Note
Vaddio recommends adhering to the 568B cabling standard for Cat-5 cabling.

Visual Conventions for Connection Diagrams

The following sections provide representative connection diagrams for the various OneLINK kit and system configurations available. All diagrams in this guide use these visual conventions for connection type.
Connections for HDBaseT Cameras

In this configuration, the OneLINK Bridge extends network connectivity, power, and control to an HDBaseT camera, and brings HDMI video from the camera to a display. The camera can optionally be controlled by a camera controller on an RS-232 serial connection to the OneLINK Bridge or over the network, depending on the controller. The OneLINK Bridge also provides connections for microphones and speakers, and can originate a USB stream to bridge the non-USB camera and audio equipment into a USB-based conferencing application.

If an IP stream is available from the camera, the OneLINK device passes it to the network. IP streaming resolutions up to 2160p/30 are supported. HDMI output resolution and streaming parameters (including resolution) are configured on the camera, not the OneLINK device.

Kits and Systems for HDBaseT Cameras

This block diagram applies to:
- OneLINK Bridge for Vaddio HDBT Cameras, 999-9595-000/001/009 – compatible with all Vaddio HDBaseT cameras.
- RoboSHOT 12 HDBT OneLINK Bridge System, 999-9960-200/201/209
- RoboSHOT 30 HDBT OneLINK Bridge System, 999-9963-200/200W/201/201W/209/209W
- DocCAM 20 HDBT OneLINK Bridge System, 999-9968-300/301/309
- Future systems consisting of a Vaddio HDBaseT camera and a OneLINK Bridge AV interface
Connecting a Vaddio HDBaseT Camera

999-9595-000/001/009

In this diagram, the OneLINK Bridge extends network connectivity, power, and control to a RoboSHOT 12 HDBT camera, and brings HDMI video from the camera to a display. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Items in this diagram:
- OneLINK Bridge AV interface
- RoboSHOT 12 HDBT camera (not included in kit 999-9595-000/001/009)
- HDMI display and HDMI cable (not included)
- Laptop using soft conferencing client (not included)
- USB 3.0 cable to laptop
- Audio cables (not included) terminated with supplied connectors
- Connections to microphones and speakers (not included)
- Cat-5e cables for OneLINK and network connections (not included)

RoboSHOT HDBT Camera

Other Vaddio HDBaseT cameras connect in the same way.

Camera Configuration

You can configure the following settings on your Vaddio HDBaseT camera:
- HDMI output resolution: Depending on the camera, set this using the rotary switch on the back of the camera or the virtual rotary switch on DIP Switches tab of the System page.
- IP streaming: Streaming page. Settings include Enable/disable, streaming quality, and streaming resolution.

Point the remote at the camera and press the Data Screen button to see the camera's IP address on the connected display.

No additional configuration is required.
Connections for HDBaseT Cameras Used with Codecs

In this configuration, the OneLINK HDMI extends network connectivity, power, and control to an HDBaseT camera, and brings HDMI video from the camera to a connected codec. The codec may be connected to the OneLINK device directly via RS-232, or they may communicate over the IP network, depending on the codec. The OneLINK Bridge can originate a USB stream to bridge the camera, codec, and codec-connected audio equipment into a USB-based conferencing application.

If an IP stream is available from the camera, the OneLINK device passes it to the network. IP streaming resolutions up to 2160p/30 are supported. HDMI output resolution and streaming parameters (including resolution) are configured on the camera, not the OneLINK device.

Kits for HDBaseT Cameras Used with Codecs

This block diagram applies to:
- OneLINK Bridge for Vaddio HDBT Cameras with Cisco Codecs, 999-9675-000/001/009 – compatible with all Vaddio HDBT cameras and with Cisco C20, C40, C60, SX20, and SX80 codecs.
Connecting a Vaddio HDBaseT Camera and Polycom Codec

999-9645-000/001/009

In these diagrams, the OneLINK Bridge extends network connectivity, power, and control to a RoboSHOT 12 HDBT camera, and connects the camera to a Polycom codec. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Other Vaddio HDBaseT cameras would be connected in exactly the same way.

Items in these diagrams:
- OneLINK Bridge AV interface
- Power supply with AC cord set
- Codec-side fan-out cable
- RoboSHOT 12 HDBT camera (not included)
- Polycom RealPresence Group Series codec (not included)
- HDMI display and HDMI cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)

RoboSHOT HDBT Camera and Polycom RealPresence Group 310 Codec

The Group 500 codec looks very similar and connects in the same way.

Other Vaddio HDBaseT cameras connect in the same way.
RoboSHOT HDBT Camera and Polycom RealPresence Group 700 Codec

Other Vaddio HDBaseT cameras connect in the same way.

Hardware Note: IR Forwarding

Although the OneLINK Bridge does not support IR forwarding, the two unterminated wires of the fan-out cable can be terminated and connected to an IR emitter (repeater).

Hardware Note: Connection and Configuration Changes

After connecting or configuring the equipment, reboot the OneLINK device, camera, and codec. Note that rebooting the OneLINK device does not affect the camera and codec; they must be rebooted separately.

Camera Configuration

Point the remote at the camera and press the Data Screen button to see the camera’s IP address on the connected display.

You can configure the following settings on your Vaddio HDBaseT camera:

- HDMI output resolution: Depending on the camera, set this using the rotary switch on the back of the camera or the virtual rotary switch on DIP Switches tab of the System page.
- IP streaming: Streaming page. Settings include Enable/disable, streaming quality, and streaming resolution.
- Codec Control Mode: Soft DIP on the DIP Switches tab of the System page.
- IR: ON (default). DIP switch 3 on the back of RoboSHOT 20 UHD or RoboSHOT HDBT cameras, soft DIP 3 on the DIP Switches tab of the System page for DocCAM 20 HDBT.

Note

Codec Control Mode was added to Vaddio cameras in early 2018. Your camera may require a firmware update to add this capability.
Connecting a Vaddio HDBaseT Camera and Cisco Codec

999-9675-000/001/009

In these diagrams, the OneLINK Bridge extends network connectivity, power, and control to a RoboSHOT 12 HDBT camera, and connects the camera to a Cisco codec. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Other Vaddio HDBaseT cameras would be connected in exactly the same way.

Items in these diagrams:

- OneLINK Bridge AV interface
- Power supply and AC cord set
- RS-232 adapter 998-1002-232 (used with standard Cat-5 cable on C20, C60, and SX80 codecs)
- Cisco split cable CAB-PHD4XS2-SPLIT (not included; required for SX20 codec)
- Codec-side null modem cable (used with split cable on SX20 codec)
- RoboSHOT 12 HDBT camera (not included)
- Cisco codec (not included)
- HDMI display and HDMI cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)

RoboSHOT HDBT Camera and Cisco C20 Codec

Other Vaddio HDBaseT cameras connect in the same way.
RoboSHOT HDBT Camera and Cisco C60 Codec
The C40 codec looks very similar and connects in the same way.
Other Vaddio HDBaseT cameras connect in the same way.
RoboSHOT HDBT Camera and Cisco SX20 Codec
Other Vaddio HDBaseT cameras connect in the same way.

Note
If connecting to a Cisco SX20 codec, you will need to provide a Cisco split cable, Cisco part number CAB-PHD4XS2-SPLIT.
RoboSHOT HDBT Camera and Cisco SX80 Codec
Other Vaddio HDBaseT cameras connect in the same way.

Hardware Note: RS-232 Connections
For RS-232 connections to Cisco gear using the Cisco split cable, use the appropriate null-modem cable to the RJ-45 side of the split cable. Connect the null-modem cable as indicated on the cable labels.

Hardware Note: Connection and Configuration Changes
After connecting or configuring the equipment, reboot the OneLINK device, camera, and codec. Note that rebooting the OneLINK device does not affect the camera and codec; they must be rebooted separately.
OneLINK Device Configuration

After installation is complete and the OneLINK device and camera are operational, you will need to change the AEC reference if you made the audio connections as shown in these diagrams.

On the Audio page of the OneLINK Bridge web interface, set Master Output/AEC Reference to Output 2 if using Line Out 2 for the speaker connection.

Camera Configuration

Point the remote at the camera and press the Data Screen button to see the camera's IP address on the connected display.

You can configure the following settings on your Vaddio HDBaseT camera:

- HDMI output resolution: Depending on the camera, set this using the rotary switch on the back of the camera or the virtual rotary switch on DIP Switches tab of the System page.
- IP streaming: Streaming page. Settings include Enable/disable, streaming quality, and streaming resolution.
- Codec Control Mode: Soft DIP on the DIP Switches tab of the System page.
- IR: ON (default). DIP switch 3 on the back of RoboSHOT 20 UHD or RoboSHOT HDBT cameras, soft DIP 3 on the DIP Switches tab of the System page for DocCAM 20 HDBT.

Note

Codec Control Mode was added to Vaddio cameras in early 2018. Your camera may require a firmware update to add this capability.
Connections for HDMI Cameras

In this configuration, the OneLINK Bridge extends network connectivity, power, and control to an HDMI camera, and brings HDMI video from the camera to a display. The camera can optionally be controlled by a camera controller on an RS-232 serial connection to the OneLINK Bridge or over the network, depending on the controller. The OneLINK Bridge also provides connections for microphones and speakers, and can originate a USB stream to bridge the non-USB camera and audio equipment into a USB-based conferencing application.

If an IP stream is available from the camera, the OneLINK device passes it to the network. IP streaming resolutions up to 2160p/30 are supported. HDMI output resolution and streaming parameters (including resolution) are configured on the camera, not the OneLINK device.

Kits for HDMI Cameras

This block diagram applies to:

- OneLINK Bridge AV interface for Polycom cameras with Polycom Codecs, 999-9620-000/001/009, when used without a codec – compatible with Polycom EagleEye IV camera.
- OneLINK Bridge AV interface for Cisco Cameras with Cisco Codecs, 999-9660-000/001/009, when used without a codec – compatible with Cisco Precision series cameras.
- OneLINK Bridge AV Interface for RoboSHOT HDMICameras, 999-9690-000/001/009
Connecting a RoboSHOT HDMI Camera

999-9690-000/001/009

In this diagram, the OneLINK Bridge extends network connectivity, power, and control to a RoboSHOT HDMI camera, and brings camera video to the connected HDMI display. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Items in this diagram:
- OneLINK Bridge AV interface and OneLINK EZIM
- OneLINK power supply and AC cord set
- RoboSHOT 12 HDMI camera (not included)
- Power cable, HDMI cable, and Cat-5e cables from the OneLINK EZIM to the camera
- HDMI display and HDMI cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)

Camera Configuration

Set HDMI output resolution using the rotary switch on the back of the camera. No additional configuration is required; if desired, additional configuration is available via the camera's web interface. Point the remote at the camera and press the Data Screen button to see the camera's IP address on the connected HDMI display.
Connecting a Polycom EagleEye IV Camera

999-9620-000/001/009

In this diagram, the OneLINK Bridge extends network connectivity, power, and control to a Polycom EagleEye IV camera, and brings HDMI video from the camera to a display. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Items in this diagram:
- OneLINK Bridge AV interface and OneLINK EZIM
- Power supply and AC cord set
- Camera-side fan-out cable
- Polycom EagleEye IV camera (not included)
- HDMI display and cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)
Connecting a Cisco Camera

999-9660-000/001/009

In these diagrams, the OneLINK Bridge extends power and control to a Cisco camera, and brings HDMI video from the camera to a display. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

- OneLINK BridgeAV interface and OneLINK EZIM
- Camera-side fan-out cable (not included; used with Precision 40 and Precision HD 1080p2.5x)
- Cisco camera (not included)
- HDMI display and HDMI cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)

Cisco Precision 40 or Precision HD Series Camera

Note
If connecting to a Cisco Precision 40 or Precision HD 1080p2.5x camera, you will need to provide a Cisco split cable, Cisco part number CAB-PHD4XS2-SPLIT.
Cisco Precision 60 Camera

Hardware Note: RS-232 Connections
For RS-232 connections to Cisco cameras, use the appropriate null-modem cable. Connect it as indicated on the cable labels. This cable is used with the Cisco split cable CAB-PHD4XS2-SPLIT for some cameras.
Connecting a Sony or Panasonic HDMI Camera

999-9630-000/001/009

In these diagrams, the OneLINK Bridge extends power and control to a Sony or Panasonic HDMI camera, and brings video from the camera to a display. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Items in this diagram:
- OneLINK Bridge AV interface and OneLINK EZIM
- Power supply and AC cord set
- Camera with cables (not included)
- HDMI display and cable (not included)
- Laptop with soft conferencing client (not included)

Panasonic AW-HE130 Camera
Sony SRG300 Camera

The SRG120 camera's connector panel looks very similar, and connects in the same way.
Connections for HDMI Cameras Used with Codecs

In this configuration, the OneLINK HDMI extends network connectivity, power, and control to an HDMI camera, and brings HDMI video from the camera to a connected codec. The codec may be connected to the OneLINK device directly via RS-232, or they may communicate over the IP network, depending on the codec. The OneLINK Bridge can originate a USB stream to bridge the camera, codec, and codec-connected audio equipment into a USB-based conferencing application.

If an IP stream is available from the camera, the OneLINK device passes it to the network. IP streaming resolutions up to 2160p/30 are supported. HDMI output resolution and streaming parameters (including resolution) are configured on the camera, not the OneLINK device.

Kits for HDMI Cameras Used with Codecs

This block diagram applies to:

- OneLINK Bridge for Cisco Cameras with Cisco Codecs, 999-9660-000/001/009 – compatible with Cisco Precision series cameras and Cisco C20, C40, C60, SX20, and SX80 codecs.
- OneLINK Bridge for RoboSHOT HDMI Cameras with Cisco Codecs, 999-9670-000/001/009 – compatible with RoboSHOT HDMI cameras and with Cisco C20, C40, C60, SX20, and SX80 codecs.
Connecting a RoboSHOT HDMI Camera and Polycom Codec

999-9640-000/001/009

In these diagrams, the OneLINK Bridge extends network connectivity, power, and control to a RoboSHOT 12 or 30 HDMI camera, and connects the camera to a Polycom codec. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Items in these diagrams:
- OneLINK Bridge AV interface and OneLINK EZIM
- Power supply with AC cord set
- RoboSHOT 12 HDMI camera (not included)
- Polycom RealPresence Group Series codec (not included)
- Codec-side fan-out cable
- HDMI display and HDMI cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)

RoboSHOT HDMI Camera and Polycom RealPresence Group 310 Codec

The Group 500 codec looks very similar and connects in the same way.
RoboSHOT HDMI Camera and Polycom RealPresence Group 700 Codec

Hardware Note: IR Forwarding
Although the OneLINK Bridge does not support IR forwarding, the two unterminated wires of the fan-out cable can be terminated and connected to an IR emitter (repeater).

Hardware Note: Connection and Configuration Changes
After connecting or configuring the equipment, reboot the OneLINK device, camera, and codec. Note that rebooting the OneLINK device does not affect the camera and codec; they must be rebooted separately.

Camera Configuration
Set HDMI resolution and IR forwarding using the switches on the back of the camera:
- Set HDMI output resolution using the rotary switch.
- Set DIP switch 3 DOWN to enable IR forwarding.

Codec Control Mode and other configuration settings are available from the camera’s web interface. Point the remote at the camera and press the Data Screen button to see the camera’s IP address on the connected HDMI display.

Enable Codec Control Mode on the DIP Switches tab of the System page.

Note
Codec Control Mode was added to Vaddio cameras in early 2018. Your camera may require a firmware update to add this capability.
Connecting a Polycom EagleEye IV Camera and Polycom Codec

999-9620-000/001/009

In these diagrams, the OneLINK Bridge extends network connectivity, power, and control to a Polycom EagleEye IV camera, and connects the camera to a Polycom codec. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Items in these diagrams:
- OneLINK Bridge AV interface and OneLINK EZIM
- Power supply with AC cord set
- Polycom EagleEye IV camera (not included)
- Polycom RealPresence Group Series codec (not included)
- Codec-side fan-out cable
- HDMI display and HDMI cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)

Polycom EagleEye IV Camera and Polycom RealPresence Group 310 Codec

The Group 500 codec looks very similar and connects in the same way.
Polycom EagleEye IV Camera and Polycom RealPresence Group 700 Codec

Hardware Note: IR Forwarding
Although the OneLINK Bridge does not support IR forwarding, the two unterminated wires of the fan-out cable can be terminated and connected to an IR emitter (repeater).

Hardware Note: Connection and Configuration Changes
After connecting or configuring the equipment, reboot the OneLINK device, camera, and codec. Note that rebooting the OneLINK device does not affect the camera and codec; they must be rebooted separately.
Connecting a RoboSHOT HDMI Camera and Cisco Codec

999-9670-000/001/009

In these diagrams, the OneLINK Bridge extends network connectivity, power, and control to a RoboSHOT 12 or 30 HDMI camera, and connects the camera to a Cisco codec. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Items in these diagrams:
- OneLINK Bridge AV interface and OneLINK EZIM
- Power supply and AC cord set
- RS-232 adapter 998-1002-232 (used with standard Cat-5 cable on C20, C60, and SX80 codecs)
- Cisco split cable CAB-PHD4XS2-SPLIT (not included; required for SX20 codec)
- Codec-side null modem cable (used with split cable on SX20 codec)
- RoboSHOT 12 HDMI camera (not included)
- Cisco codec (not included)
- HDMI display and HDMI cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)

RoboSHOT HDMI Camera and Cisco C20 Codec
RoboSHOT HDMI Camera and Cisco C60 Codec

The C40 codec looks very similar and connects in the same way.
RoboSHOT HDMI Camera and Cisco SX20 Codec

Note
If connecting to a Cisco SX20 codec, you will need to provide a Cisco split cable, Cisco part number CAB-PHD4XS2-SPLIT.
RoboSHOT HDMI Camera and Cisco SX80 Codec

Hardware Note: RS-232 Connections

For RS-232 connections to Cisco gear using the Cisco split cable, use the appropriate null-modem cable to the RJ-45 side of the split cable. Connect the null-modem cable as indicated on the cable labels.

Hardware Note: Connection and Configuration Changes

After connecting or configuring the equipment, reboot the OneLINK device, camera, and codec. Note that rebooting the OneLINK device does not affect the camera and codec; they must be rebooted separately.
OneLINK Device Configuration

After installation is complete and the OneLINK device and camera are operational, you will need to change the AEC reference if you made the audio connections as shown in these diagrams.

On the Audio page of the OneLINK Bridge web interface, set Master Output/AEC Reference to Output 2 if using Line Out 2 for the speaker connection.

Camera Configuration

Set HDMI resolution and IR forwarding using the switches on the back of the camera:

- Set HDMI output resolution using the rotary switch.
- Set DIP switch 3 DOWN to enable IR forwarding.

Codec Control Mode and other configuration settings are available from the camera's web interface. Point the remote at the camera and press the Data Screen button to see the camera's IP address on the connected HDMI display.

Enable Codec Control Mode on the DIP Switches tab of the System page.

Note

Codec Control Mode was added to Vaddio cameras in early 2018. Your camera may require a firmware update to add this capability.
Connecting a Cisco Camera and Codec

999-9660-000/001/009

In these diagrams, the OneLINK Bridge extends network connectivity, power, and control to a Cisco camera, and connects the camera to a Cisco codec. The OneLINK Bridge also provides audio connections, and can originate a USB stream to bridge non-USB equipment into a USB-based conferencing application.

Items in these diagrams:

- OneLINK BridgeAV interface and OneLINK EZIM
- Cisco split cable CAB-PHD4XS2-SPLIT (not included; required for SX20 codec and for Precision 40 and Precision HD 1080p2.5x cameras)
- Camera-side null modem cable (used on all supported Cisco cameras)
- Codec-side null modem cable (used with Cisco split cable on SX20 codec)
- RS-232 adapter 998-1002-232 (used with standard Cat-5 cable on C20, C60, and SX80 codecs)
- Cisco camera (not included)
- Cisco codec (not included)
- HDMI display and HDMI cable (not included)
- Laptop with soft conferencing client (not included)
- Cat-5e cables for OneLINK and network connections (not included)

**Note**

*If connecting to a Cisco SX20 codec, you will need to provide a Cisco split cable, Cisco part number CAB-PHD4XS2-SPLIT. This cable is also required when connecting to a Cisco Precision 40 or Precision HD 1080p2.5x camera; you will need two of them if connecting one of these cameras and an SX20 codec.*
Cisco Precision 40 or Precision HD Series Camera and Cisco C20 Codec
Cisco Precision 40 or Precision HD Series Camera and Cisco C60 Codec
The C40 codec looks very similar and connects in the same way.
Cisco Precision 40 or Precision HD Series Camera and Cisco SX20 Codec
Cisco Precision 40 or Precision HD Series Camera and Cisco SX80 Codec

Integrator's Complete Guide to the OneLINK Bridge AV Interface
Cisco Precision 60 Camera and Cisco SX80 Codec

Hardware Note: RS-232 Connections
For RS-232 connections to Cisco gear using the Cisco split cable, use the appropriate null-modem cable to the RJ-45 side of the split cable. Connect the null-modem cable as indicated on the cable labels.

Hardware Note: Connection and Configuration Changes
After connecting or configuring the equipment, reboot the OneLINK device, camera, and codec. Note that rebooting the OneLINK device does not affect the camera and codec; they must be rebooted separately.
OneLINK Device Configuration

After installation is complete and the OneLINK device and camera are operational, you will need to change the AEC reference if you made the audio connections as shown in these diagrams.

On the Audio page of the OneLINK Bridge web interface, set Master Output/AEC Reference to Output 2 if using Line Out 2 for the speaker connection.
Powering Up the Equipment

Power up the connected equipment that is not powered by the OneLINK device (such as displays and third-party control devices), then connect power to the OneLINK device. The connected camera and the OneLINK device power up together.

Configuration and Administration Tasks

The OneLINK Bridge AV interface provides a web interface to allow configuration and administration using a browser.

The web interface allows password-protected access to tasks such as setting passwords, changing the IP address, viewing diagnostics, and installing firmware updates.

Note
The OneLINK device is not a camera control device. To configure or operate the camera, use the camera’s web interface. Refer to the camera’s documentation for details.

Note
The connected camera is configured separately from the OneLINK device. Changes to the OneLINK device’s configuration do not affect the configuration of the camera or other connected equipment. If you need to change the way the camera is configured, log in to the camera’s web interface.

Compatible Web Browsers

We have tested this product with these web browsers:

- Chrome®
- Firefox®
- Microsoft® Internet Explorer®
- Safari®

We test using the browser version available from the vendor at that time. Older versions of these browsers are likely to work, and other browsers may also work.
Accessing the Web Interface

To get the IP address:
Press the button labeled Display IP and MAC Address, on the front of the unit. The information is overlaid on the HDMI, HD-SDI, and USB video outputs.

The OneLINK device will use the default address of 169.254.10.1 if no DHCP server is available. In this situation, you will need to connect a computer to the OneLINK device’s network port and configure network settings. Depending on the computer, you may need a crossover cable.

To access the web interface:
Enter the IP address or hostname in your browser's address bar. If you use the hostname, you may need to enter http:// as a prefix to keep the browser from treating it as a search query.

The login page opens. The username admin and the default password is password.

After you log in, the System page opens.

Note
For best security, Vaddio strongly recommends changing the default password. Using default passwords leaves the product vulnerable to tampering. See Managing Access and Passwords.
Web Interface Cheat Sheet

You must log in to access the pages for all system administration tasks.

*Note*
*The OneLINK device’s web interface does not provide access to the connected camera. To configure the camera, use the camera’s web interface, which is at a separate IP address.*

<table>
<thead>
<tr>
<th>What do you need to do?</th>

</tbody>
</table>

For your convenience, the navigation panel also provides an elegant Logout button for ending your session gracefully – and leaving the web interface in a password-protected state.
Configuring Network Settings

These settings are for the OneLINK device only. The camera is configured separately. DHCP addressing is the default setting. In a DHCP environment, you will not need to change the network configuration.

The OneLINK device will use the default address of 169.254.10.1 if no DHCP server is available. In this situation, you will need to connect a computer to the OneLINK device's network port and configure network settings. Depending on the computer, you may need a crossover cable.

**Caution**
Consult your IT department before changing network settings. Errors in network configuration can make the OneLINK device and connected equipment inaccessible from the network. Do not change DHCP/Static addressing, IP address, subnet mask, or gateway unless you are very familiar with the characteristics and configuration of the network where you install the equipment.

To assign a static IP address:
1. Select static IP addressing.
2. Specify the IP address, subnet mask, and gateway address.
3. Save your changes.

**Pro Tip**
Make sure you have a way to remember the IP address. There is no hardware factory reset.
Assigning a Hostname

The default hostname for the OneLINK BridgeAV interface is the string vaddio-onelink-bridge-followed by the device's MAC address. You can change this in the Hostname field.

If your network supports hostname resolution, you can browse to the OneLINK device by hostname even if you cannot readily determine its IP address. In this situation, you may wish to assign a hostname according to your IT department's naming guidelines.

To edit the hostname:
Enter the desired hostname in the Hostname text box, and save your changes.

Specifying Time Zone and NTP Server

To ensure that data exports receive accurate time stamps, and to display the correct date and time on the Networking page, NTP updating must be enabled.

1. Enable Automatic NTP Updating.
2. Select the desired time zone from the list.
3. If desired, specify the NTP server to use. Otherwise, use the default.
4. Select Refresh to update the displayed date and time.
Managing Access and Passwords

SECURITY PAGE

Things you can do on this screen:
- Set whether inactive sessions log off automatically or not
- Change the password for the admin account (default is password)

Note
For best security, Vaddio strongly recommends changing passwords from the default. Using default passwords leaves the product vulnerable to tampering.

Pro Tip
Make sure you have a way to remember the admin password. There is no hardware factory reset.

Adding Room Information to the Web Interface

ROOM LABELS PAGE

On this page, you can provide information about the OneLINK Bridge AV interface’s location:
- Name of the organization
- Name of the room where the equipment is installed
- Phone number of the room where the equipment is installed
- Phone number for the AV or IT support team

This information appears on every page of the OneLINK web interface.

Note
This does not affect the room information (if any) presented on the web interface for the attached camera.
Configuring Streaming Settings

STREAMING PAGE

The camera's settings are used for IP streaming; the OneLINK BridgeAV interface passes the IP stream from the camera and does not require additional IP streaming configuration.

For non-USB cameras, the OneLINK Bridge AV interface provides USB streaming capability. On the Streaming page, you can:
- Disable/enable USB streaming
- Allow the conferencing application to control the audio
- Edit the USB device name

After making changes on this page, save them.

To disable or enable streaming:
USB streaming is enabled by default. Use the Enable USB Streaming checkbox to change this.

To control the audio from a computer:
Check the Enabled box for HID Audio Controls.

Note
When HID Audio Controls are enabled, we recommend controlling volume manually. Allowing the conferencing application to manage the volume automatically can produce undesirable results.

To edit the USB device name:
To change the way the OneLINK device shows up in your soft client's selection list, edit the USB Device Name.
Enabling Phantom Power to Microphones

**AUDIO PAGE, ANALOG TAB**

To supply 48 VDC phantom power to a connected microphone, check the Phantom Power checkbox below the controls for the Line/Mic input.
Configuring Audio Settings

**AUDIO PAGE**

The web interface provides separate controls for each of the audio inputs and outputs:
- Analog (Mic/Line In 1 and 2, and Line Out 1 and 2)
- Digital (HDBT Input left and right, HDMI Output left and right, SDI Output left and right)
- Streaming (USB Playback left and right, HDBT Output left and right, USB Record left and right)

The Matrix tab of the Audio page defines audio routing.

**Muting the Microphones**

Use the Mute control at the top of any page.

**Controlling Volume on Individual Inputs or Outputs**

**AUDIO PAGE, ANALOG, DIGITAL, AND STREAMING TABS**

Use the button to mute the desired audio input or output. Use the slider to set the volume.

*Note*

For best performance with most computers, we recommend setting the USB Record volume high.
Default Microphone Settings

**AUDIOPAGE, ANALOGTAB**

**Acoustic Echo Cancellation** – Enabled; prevents audio feedback by cancelling the specified output signal out of the line/mic input.

*Note*
If using the OneLINK Bridge with a conferencing codec, ensure that echo cancellation is enabled on only one device, whether it is the OneLINK Bridge or the codec. If echo cancellation is enabled on both the OneLINK Bridge and the codec, unexpected audio effects may result. We recommend disabling echo cancellation on the OneLINK Bridge and allowing the conferencing codec to handle it.

**Noise Cancellation** – Enabled; suppresses ambient noise.

**Automatic Gain Control** – Disabled; adjusts gain to compensate for differences in volume as different people speak.
Microphone Settings for Environments with Audiences

**AUDIO PAGE, ANALOG AND MATRIX TABS**

**Speech Lift:** Feeds the signal from the specified microphone to the speakers in the room, so that people in the back of the room can hear the person who is speaking.

**Chairman Override:** Gives priority to the specified microphone when more than one person is speaking. (Matrix tab only)
Microphone Adjustments

**AUDIO PAGE, ANALOG TAB**

**To adjust for more natural speech reproduction:**

- **High-pass filter** – Specify the lowest frequency that the microphone should pick up. Use this setting to reduce low-frequency background noise such as heating/air conditioning systems.
- **Low-pass filter** – Specify the highest frequency that the microphone should pick up. Use this setting to reduce hissing sounds and make speech sound natural.
- **PEQ (parametric equalizer)** – Increase or reduce the volume of specific frequency ranges to compensate for the audio challenges unique to the situation.

**Note**

As a best practice, use the equalizer to attenuate undesirable frequency ranges rather than to boost the desirable frequencies.
Speaker Adjustments

**Audio Page, Analog and Streaming Tabs**

**To sync the sound with the video:**
If the video lags noticeably behind the audio, check the Delay box for the appropriate audio outputs (Analog or Streaming tab) and enter a delay value in msec. The delay may differ from one output to another.

**To compensate for differing speech volumes:**
If some people on the far end are inaudible while others are too loud, check the Compressor box to reduce the dynamic range from the connected speakers. (Analog tab only.)

**To compensate for specific audio issues on the far end:**
Use the equalizers for the analog outputs to attenuate specific frequency ranges. This can help if the far-end audio includes unwanted elements such as a rumbling HVAC system or a cricket in the room.
Preventing Audio Feedback

**AUDIO PAGE, ANALOG TAB**

Audio feedback results when the microphones pick up audio from the speakers.

1. Select Echo Cancellation on any line inputs that are connected to signal sources.
2. In the Global Settings, under Master Output/AEC Reference, select the audio output to use as the reference - the signal that will be cancelled out of the inputs.
Default Audio Matrix

**AUDIO PAGE, MATRIX TAB**

The audio matrix shows where each audio output originates. Each column of the matrix shows one audio output, and each row shows one audio input. Table cells highlighted in blue mean that the input represented in that row is routed to the output represented in that column.

- **USB Playback** left and right (far-end audio from the soft conferencing client) route to line output 1 (typically the speaker in your conference room).
- **Line/Mic 1** (your room’s microphone) routes to USB Record left and right (the audio that the participants on the far end hear).
- **HDBT** left and right (far-end audio received as part of the HDMI signal over the HDBT connection) routes to HDMI Output left and right, and goes to the HDMI display’s speakers.

Routing Audio

**AUDIO PAGE, MATRIX TAB**

To specify how the OneLINK Bridge uses a given audio input, locate its row. Locate the column representing the desired output and select the table cell where the desired row and column intersect.

Example: The USB stream has left and right audio channels, but by default Line/Mic 1 provides the source for both channels of outbound USB audio (USB Record left and right) and both channels of incoming USB audio are routed to Output 1 (Audio Line Out 1). You might choose to change the default matrix to provide separate right and left channels of outbound and inbound USB audio.
Viewing System Information

**SYSTEM PAGE**

The information on the System page includes the version – so you don’t need to guess about whether the latest update has already been installed.

The System page also provides controls to:
- Reboot the OneLINK device
- Back up or restore configuration data
- Restore factory presets
- Update the firmware

![System Information Screen](image)

Saving (Exporting) or Restoring (Importing) a Configuration

**SYSTEM PAGE**

You can save a known good configuration by exporting it. This allows you to quickly configure several OneLINK devices the same way, by importing the configuration to all of them. It also gives you a quick way to go back to a known good configuration if you are concerned about planned changes on a specific unit.

The configuration file can only be imported to a OneLINK device using the same version of firmware from which the file was exported. You cannot export a configuration, update the firmware, and import the configuration – but you won’t need to. Firmware updates do not change the device configuration.
To export the current configuration:
Select Export Data. The configuration file downloads to your computer’s default download location as a .dat file. The filename is the device’s hostname.

Note
You can import a configuration file from another OneLINK device; however, the configuration file can only be imported to a device that is using the same version of firmware from which the file was exported. The OneLINK device cannot import a configuration file that was exported from a different version of firmware.

To import a configuration file:
1. Select Import Data. The Import Data dialog opens.
2. Select Choose File, and select the configuration file. The filename is the OneLINK device’s hostname, with the file extension .dat. The OneLINK device loads the configuration and reboots.

Rebooting the OneLINK Device

SYSTEM PAGE
This may help if the OneLINK device stops responding as you expect.
In the System Utilities section of the System page, select Reboot.

Restoring Factory Settings

SYSTEM PAGE
Select Restore Factory Settings to return to the default configuration. Read the confirmation message before you select Continue or Cancel.
Starting a Firmware Update

SYSTEM PAGE

Caution
Do not remove power or disconnect the OneLINK device while a firmware update is in progress. Interrupting a firmware update can make the OneLINK device unusable.

1. Be sure you have downloaded the appropriate update file to your computer.
2. Select Choose File, browse to the firmware update file that you downloaded, and select it. The filename ends with .p7m. The System page then displays the filename beside the Choose File button.

3. OPTIONAL: Select Export Data to save a copy of the OneLINK device’s current configuration. You probably won’t need it, but it could save time if you need to roll back the update.
4. Select Begin Firmware Update.
5. READ the information in the Confirm dialog box and be sure you understand it. It’s boring, but it could save you a lot of time and aggravation.

6. When you are ready to start the update, select Continue.
7. If the update process presents warnings or error messages, read them carefully.
8. Contact Vaddio technical support if you encounter any problems with the update.
Contacting Vaddio Technical Support and Viewing Diagnostics

HELP PAGE, DIAGNOSTICS PAGE

If you encounter an issue that you can't resolve using your superior troubleshooting skills (and perhaps the Troubleshooting section of this guide), go to the Help page. This page provides Vaddio Technical Support contact information.

Your Vaddio technical support representative may ask you to download and email the log file available from the Diagnostics page.

The information on this page does not necessarily indicate errors or problems. Most of it is a log of code execution that can be helpful later if technical support or engineering staff need to research an issue.
Telnet Serial Command API

The Vaddio Telnet serial command API is a high-level, text-based command line interface to allow an external device such as AMX or Crestron to control the OneLINK device. Use a Telnet client to access the API via the network. The default Telnet port is 23. Telnet sessions require the admin account login.

Using a question mark as a command parameter will bring up a list of available commands for the menu you are in.

Things to know about control via Telnet session:
- Command lines are terminated with a carriage return.
- All ASCII characters (including carriage returns) are echoed to the terminal program and appended with the VT100 string ESC[J (hex 1B 5B 4A), which most terminal programs automatically strip.
- CTRL-S clears the current serial buffer on the device.

Typographical conventions:
- { x | y | z} – Choose x, y, or z.
- <variable> – Substitute the desired value here.
- < x - y > – Valid range of values is from x through y.
- [parameter] – Parameter is not required.

Note
The commands in this guide refer to the OneLINK device. To control the camera itself, open a Telnet session to the camera’s IP address and use the camera’s Telnet commands.

link power
Sets the camera connection on or off.

Note
The OneLINK device does not provide camera control. To set the camera to standby instead of powering it off, use the camera’s remote or other camera control interface to issue a standby command directly to the camera.

| Synopsis | link power { on | off } |
|----------|------------------------|
| Options  | off                    |
|          | on                     |
| Examples | >link power off        |
|          | OK                     |

Powers off the camera connection.

Powers on the camera connection.

Powers off the camera connection.
## audio volume

Gets or sets the volume of the specified audio channel.

| Synopsis                  | audio [channel] volume {get | on | off | toggle} |
|---------------------------|--------------------------------------------------|
| Channels                  | master: Applies the command to all audio channels. |
|                           | line_in_1: Line/Mic In ports (typically microphone inputs). |
|                           | line_in_2: |
|                           | usb3_playback_left: Audio portion of the incoming (far-end) USB stream, left and right channels. |
|                           | usb3_playback_right: |
|                           | hdtb_in_left: Audio portion of the incoming (far-end) HDMI signal, left and right channels. |
|                           | hdtb_in_right: |
|                           | line_out_1: Line Out ports (typically speaker outputs). |
|                           | line_out_2: |
|                           | usb3_record_left: Outbound (near-end) audio portion of the USB stream, left and right channels. |
|                           | usb3_record_right: |
|                           | hdmi_out_left: Audio portion of the HDMI output (far-end audio to the display’s speakers), left and right channels. |
|                           | hdmi_out_right: |
|                           | sdi_out_left: Audio portion of the SDI output (far-end audio to the display’s speakers), left and right channels. |
|                           | sdi_out_right: |
|                           | hdtb_out_left: Outbound (far-end) audio portion of the IP stream, left and right channels. |
|                           | hdtb_out_right: |
| Options                   | get: Returns the current volume of the specified channel. |
|                           | up: Increases the volume of the specified channel. |
|                           | down: Reduces the volume of the specified channel. |
|                           | set: Sets the volume of the specified channel. |
| Examples                  | audio line_in_1 volume set -5 OK > |
|                           | Sets -5 dB as the volume for the device connected to the Line In 1 port. |
|                           | audio line_out_1 volume get volume -10.0 dB OK > |
|                           | Returns the current volume for the speaker connected to the line out port. |
# audio mute

Gets or sets the mute status of the specified audio channel.

| Synopsis | audio [channel] mute (get | on | off | toggle) |
|----------|---------------------------------|
| Channels | master                           | Applies the command to all audio channels. |
|          | line_in_1                         | Line/Mic In ports (typically microphone inputs). |
|          | line_in_2                         | Line/Mic In ports (typically microphone inputs). |
|          | usb3_playback_left                 | Audio portion of the incoming (far-end) USB stream, left and right channels. |
|          | usb3_playback_right                | Audio portion of the incoming (far-end) USB stream, left and right channels. |
|          | hdbt_in_left                       | Audio portion of the incoming (far-end) HDMI signal, left and right channels. |
|          | hdbt_in_right                      | Audio portion of the incoming (far-end) HDMI signal, left and right channels. |
|          | line_out_1                         | Line Out ports (typically speaker outputs). |
|          | line_out_2                         | Line Out ports (typically speaker outputs). |
|          | usb3_record_left                   | Outbound (near-end) audio portion of the USB stream, left and right channels. |
|          | usb3_record_right                  | Outbound (near-end) audio portion of the USB stream, left and right channels. |
|          | hdmi_out_left                      | Audio portion of the HDMI output (far-end audio to the display’s speakers), left and right channels. |
|          | hdmi_out_right                     | Audio portion of the HDMI output (far-end audio to the display’s speakers), left and right channels. |
|          | sdi_out_left                       | Audio portion of the SDI output (far-end audio to the display’s speakers), left and right channels. |
|          | sdi_out_right                      | Audio portion of the SDI output (far-end audio to the display’s speakers), left and right channels. |
|          | hdbt_out_left                      | Outbound (far-end) audio portion of the IP stream, left and right channels. |
|          | hdbt_out_right                     | Outbound (far-end) audio portion of the IP stream, left and right channels. |
| Options  | get                               | Returns the current mute status of the specified channel. |
|          | on                                | Mutes the audio for the specified channel. |
|          | off                               | Unmutes the audio for the specified channel. |
|          | toggle                            | Changes the mute state for the specified channel – unmutes if it was muted, mutes if it was not. |

| Examples | > audio line_out_1 mute get | mute: off | OK |
|          | > audio master mute on | Mutes all audio. |

Returns the current mute state of the device connected to audio line out 1. Mute is off, so the audio is on.
**audio route**

Gets or sets the input routed to the specified output.

| Synopsis | audio [channel] route (get | set) |
|----------|----------------------------------|
| Outputs  |                                  |
| line_out_1 | Line Out ports (typically speaker outputs). |
| line_out_2 |                                  |
| usb3_record_left | Outbound (near-end) audio portion of the USB stream, left and right channels. |
| usb3_record_right |                                  |
| hdmi_out_left | Audio portion of the HDMI output (far-end audio to the display's speakers), left and right channels. |
| hdmi_out_right |                                  |
| sdi_out_left | Audio portion of the SDI output (far-end audio to the display's speakers), left and right channels. |
| sdi_out_right |                                  |
| hdbt_out_left | Outbound (far-end) audio portion of the IP stream, left and right channels. |
| hdbt_out_right |                                  |
| Options  |                                  |
| get      | Returns the routing for the specified output. |
| set      | Sets the routing for the specified input. |
| Inputs   |                                  |
| line_in_1 | Line/Mic In ports (typically microphone inputs). |
| line_in_2 |                                  |
| usb3_playback_left | Audio portion of the incoming (far-end) USB stream, left and right channels. |
| usb3_playback_right |                                  |
| hdbt_in_left | Audio portion of the incoming (far-end) HDMI signal, left and right channels. |
| hdbt_in_right |                                  |
| Examples |                                  |

```
> audio line_out_1 route get
[usb3_playback_left usb3_playback_right ]
OK
>
```

Returns the current source of the audio output on Line Out 1 (typically a speaker). Both channels of far-end audio from the USB stream are currently routed to this output.
## audio crosspoint-gain

Returns or sets the current routing gain, in dB, for the crosspoint between a given output and input.

| Synopsis | audio <output> crosspoint-gain <input> {get | set <level>} |
|----------|-----------------------------------------------------------|
| **Outputs** | |
| line_out_1 | Line Out ports (typically speaker outputs). |
| line_out_2 | |
| usb3_record_left | Outbound (near-end) audio portion of the USB stream, left and right channels. |
| usb3_record_right | |
| hdmi_out_left | Audio portion of the HDMI output (far-end audio to the display’s speakers), left and right channels. |
| hdmi_out_right | |
| sdi_out_left | Audio portion of the SDI output (far-end audio to the display's speakers), left and right channels. |
| sdi_out_right | |
| hdbt_out_left | Outbound (far-end) audio portion of the IP stream, left and right channels. |
| hdbt_out_right | |
| **Inputs** | |
| line_in_1 | Line/Mic In ports (typically microphone inputs). |
| line_in_2 | |
| usb3_playback_left | Audio portion of the incoming (far-end) USB stream, left and right channels. |
| usb3_playback_right | |
| hdbt_in_left | Audio portion of the incoming (far-end) HDMI signal, left and right channels. |
| hdbt_in_right | |
| **Options** | |
| get | Returns the gain from the specified input to the specified output. |
| set | Sets the gain from the specified input to the specified output. Valid range is -12.0 dB to 12.0 dB. |
| set <-12.0..12.0> | |

**Examples**

```bash
> audio program_out_left crosspoint-gain usb3_in_left get
3.9
OK
>
Returns the gain from the left channel of the USB 3 playback to the left channel of the program output.

> audio program_out_left crosspoint-gain usb3_in_left set -3
OK
>
Sets the gain from the left channel of the USB 3 playback to the left channel of the program output to -3 dB.
```
sleep

Pauses for the specified number of milliseconds before evaluating and executing the next command.

<table>
<thead>
<tr>
<th>Synopsis</th>
<th>sleep &lt;milliseconds&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>Options</td>
<td>&lt;milliseconds&gt;</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Example</th>
<th>&gt;sleep 7000</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>OK</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Pause for 7 seconds (7000 milliseconds) before returning.

network settings get

Returns the current network settings for MAC address, IP address, subnet mask, and gateway.

<table>
<thead>
<tr>
<th>Synopsis</th>
<th>network settings get</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example</td>
<td>&gt; network settings get</td>
</tr>
<tr>
<td></td>
<td>Name  eth0:WAN</td>
</tr>
<tr>
<td></td>
<td>MAC Address 00:1E:C0:F6:CA:7B</td>
</tr>
<tr>
<td></td>
<td>IP Address 192.168.1.67</td>
</tr>
<tr>
<td></td>
<td>Netmask 255.255.255.0</td>
</tr>
<tr>
<td></td>
<td>VLAN Disabled</td>
</tr>
<tr>
<td></td>
<td>Gateway 192.168.1.254</td>
</tr>
<tr>
<td></td>
<td>OK</td>
</tr>
<tr>
<td></td>
<td>&gt;</td>
</tr>
</tbody>
</table>
network ping
Sends an ICMP ECHO_REQUEST to the specified IP address or hostname.

<table>
<thead>
<tr>
<th>Synopsis</th>
<th>network ping [count &lt;count&gt;] [size &lt;size&gt;] &lt;destination-ip&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>Options</td>
<td>&lt;count&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;size&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;destination-ip&gt;</td>
</tr>
</tbody>
</table>

Examples

```
> network ping 192.168.1.66
PING 192.168.1.66 (192.168.1.66): 56 data bytes
64 bytes from 192.168.1.66: seq=0 ttl=64 time=0.476 ms
64 bytes from 192.168.1.66: seq=1 ttl=64 time=0.416 ms
64 bytes from 192.168.1.66: seq=2 ttl=64 time=0.410 ms
64 bytes from 192.168.1.66: seq=3 ttl=64 time=0.410 ms
64 bytes from 192.168.1.66: seq=4 ttl=64 time=3.112 ms
--- 192.168.1.66 ping statistics ---
5 packets transmitted, 5 packets received, 0% packet loss
round-trip min/avg/max = 0.410/0.964/3.112 ms
>
```
Sends five ECHO_REQUEST packets of 56 bytes each to the host at 192.168.1.66.

```
> network ping count 10 size 100 192.168.1.1
```
Sends 10 ECHO_REQUEST packets of 100 bytes each to the host at 192.168.1.1. The command returns data in the same form as above.

system reboot
Reboots the system either immediately or after the specified delay. Note that a reboot is required when resetting the system to factory defaults (system factory-reset).

<table>
<thead>
<tr>
<th>Synopsis</th>
<th>system reboot [&lt;seconds&gt;]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Options</td>
<td>&lt;seconds&gt;</td>
</tr>
</tbody>
</table>

Examples

```
> system reboot
OK
>
The system is going down for reboot NOW! onelink-bridge-D8-80-39-62-A7-C5
```
Reboots the system immediately.

```
> system reboot 30
```
Reboots the system in 30 seconds. The response appears at the end of the delay.
**system factory-reset**

Gets or sets the factory reset status. When the factory reset status is on, the OneLINK device resets to factory defaults on reboot.

*Note*

*This does not reset the camera.*

| Synopsis | system factory-reset { get | on | off} |
|----------|----------------------------------|
| Options  | get                              | Returns the camera’s current factory reset status. |
|          | on                               | Enables factory reset on reboot. |
|          | off                              | Disables factory reset on reboot. |

**Examples**

```bash
> system factory-reset get
factory-reset (software): off
factory-reset (hardware): off
OK
>
```

Returns the factory reset status.

This evaluates the most recent `system factory-reset on or off` command, if one has been received, then reads the rear panel DIP switches and returns the status on if they are all in the down position.

```bash
> system factory-reset on
factory-reset (software): on
factory-reset (hardware): off
OK
>
```

Enables factory reset upon reboot.

*Note*

*This command does not initiate a factory reset. The factory reset takes place on the next reboot.*
**history**

Returns the most recently issued commands from the current Telnet session. Since many of the programs read user input a line at a time, the command history is used to keep track of these lines and recall historic information.

<table>
<thead>
<tr>
<th>Synopsis</th>
<th>history &lt;limit&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td>Options</td>
<td>&lt;limit&gt;</td>
</tr>
</tbody>
</table>

**Examples**

<table>
<thead>
<tr>
<th>Example</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>history</td>
<td>Displays the current command buffer.</td>
</tr>
<tr>
<td>history 5</td>
<td>Sets the history command buffer to remember the last 5 unique entries.</td>
</tr>
</tbody>
</table>

**Additional information**

You can navigate the command history using the up and down arrow keys. This command supports the expansion functionality from which previous commands can be recalled from within a single session. History expansion is performed immediately after a complete line is read.

Examples of history expansion:

* `!!` Substitute the last command line.
* `!4` Substitute the 4th command line (absolute as per 'history' command)
* `!-3` Substitute the command line entered 3 lines before (relative)

---

**version**

Returns the current firmware version of the OneLINK device.

<table>
<thead>
<tr>
<th>Example</th>
<th>Version Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>version</td>
<td>Returns current firmware version information in a form something like this:</td>
</tr>
<tr>
<td></td>
<td>Audio 1.05-1.01</td>
</tr>

<tr>
<td>Mixing</td>
<td>10X8 audio mixer; audio is routable through all outputs</td>
</tr>
</tbody>
</table>

#### Control Features

- Web interface for configuration via browser
- Telnet API for third-party external control
- Ethernet and RS-232 control pass-through to camera
- USB Human Interface Device (HID) for room audio controls

#### Maximum cable length

328 ft (100m) Cat-5e cable; shielded Cat-6 recommended where EMI/RF interference is an issue

#### Power, Physical, and Environmental

Troubleshooting

When the Vaddio camera connected to the OneLINK device doesn't behave as you expect, check the color of the camera's indicator light before you do anything else – but keep in mind that the camera's indicator can be turned off in the administrative interface.

- Purple – booting or in standby (low power) mode.
- Blue – normal operation.
- Red – Tally function; the camera is on-air.
- Blinking red – fault condition.
- Yellow – firmware update in progress.

Now check the OneLINK device's web interface for error messages. The EZIM (if one is used) tends to run warm, which is normal. If the system detects that the temperature is too high, a temperature fault message will appear at the top of the web interface page.

If neither of these reveal the problem, use this table to determine whether it's time to call Vaddio Technical Support.

Operation, Storage, and Care

For smears or smudges on the product, wipe with a clean, soft cloth. Use a lens cleaner on the lens. Do not use any abrasive chemicals.

Keep this device away from food and liquids.

Do not operate or store the device under any of the following conditions:

- Temperatures above 40°C (104°F) or below 0°C (32°F)
- High humidity, condensing or wet environments
- Inclement weather
- Severe vibration
- Lateral acceleration of more than 27G
- Dry environments with an excess of static discharge

Do not attempt to take this product apart. There are no user-serviceable components inside.
Compliance Statements and Declarations of Conformity

Statements are given separately for the OneLINK Bridge AV interface and the OneLINK HDMI EZCamera Interface Module (EZIM).

OneLINK Bridge AV Interface

FCC Part 15 Compliance

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15, Subpart B, of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense.

Operation is subject to the following two conditions: (1) This device may not cause interference, and (2) This device must accept any interference including interference that may cause undesired operation of the device.

Changes or modifications not expressly approved by Milestone AV Technologies can affect emission compliance and could void the user’s authority to operate this equipment.

ICES-003 Compliance

This digital apparatus does not exceed the Class A limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n’émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numeriques de la classe A précisées dans le Règlement sur le brouillage radioélectrique édicte par le ministère des Communications du Canada.
European Compliance

This product has been evaluated for Electromagnetic Compatibility under the EMC Directive for Emissions and Immunity and meets the requirements for a Class A digital device. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Low Voltage Directive 2014/35/EU

|---------------------------------------------------------|--------|

RoHS Directive 2011/65/EU
OneLINK HDMI EZCamera Interface Module (EZIM)

Compliance testing was performed to the following regulations:

- FCC Part 15 (15.107, 15. 109), Subpart B Class A
- ICES-003, Issue 4: 2004 Class A
- EN 55022 A: 2006 + A1: 2007 Class A
- KN22 2008 (CISPR 22: 2006) Class A
- EMC Directive 2004/108/EC Class A
- EN 55024: A2: 2003 Class A

FCC Part 15 Compliance

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15, Subpart B, of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense.

Operation is subject to the following two conditions: (1) This device may not cause interference, and (2) This device must accept any interference including interference that may cause undesired operation of the device.

Changes or modifications not expressly approved by Vaddio can affect emission compliance and could void the user’s authority to operate this equipment.

ICES-003 Compliance

This digital apparatus does not exceed the Class A limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n’emet pas de bruits radiocoméctiques dépassant les limites applicables aux appareils numeriques de la classe A préscrites dans le Règlement sur le brouillage radioélectrique édicte par le ministère des Communications du Canada.
European Compliance

This product has been evaluated for Electromagnetic Compatibility under the EMC Directive for Emissions and Immunity and meets the requirements for a Class A digital device. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Warranty Information

See Vaddio Warranty, Service and Return Policies posted on support.vaddio.com for complete details.

**Hardware** warranty: Two (2) year limited warranty on all parts and labor for Vaddio manufactured products. Vaddio warrants its manufactured products against defects in materials and workmanship for a period of two years from the day of purchase, to the original purchaser, if Vaddio receives notice of such defects during the warranty. Vaddio, at its option, will repair or replace products that prove to be defective. Vaddio manufactures its hardware products from parts and components that are new or equivalent to new in accordance with industry standard practices.

**Exclusions:** The above warranty shall not apply to defects resulting from improper or inadequate maintenance by the customer, customers applied software or interfacing, unauthorized modifications or misuse, mishandling, operation outside the normal environmental specifications for the product, use of the incorrect power supply, modified power supply or improper site operation and maintenance. OEM and special order products manufactured by other companies are excluded and are covered by the manufacturer’s warranty.

**Vaddio Customer Service:** Vaddio will test, repair, or replace the product or products without charge if the unit is under warranty. If the product is out of warranty, Vaddio will test then repair the product or products. The cost of parts and labor charge will be estimated by a technician and confirmed by the customer prior to repair. All components must be returned for testing as a complete unit. Vaddio will not accept responsibility for shipment after it has left the premises.

**Vaddio Technical Support:** Vaddio technicians will determine and discuss with the customer the criteria for repair costs and/or replacement. Vaddio Technical Support can be contacted by email at support@vaddio.com or by phone at one of the phone numbers listed on support.vaddio.com.

**Return Material Authorization (RMA) number:** Before returning a product for repair or replacement request an RMA from Vaddio’s technical support. Provide the technician with a return phone number, e-mail address, shipping address, product serial numbers and original purchase order number. Describe the reason for repairs or returns as well as the date of purchase. See the General RMA Terms and Procedures section for more information. RMAs are valid for 30 days and will be issued to Vaddio dealers only. End users must return products through Vaddio dealers. Include the assigned RMA number in all correspondence with Vaddio. Write the assigned RMA number clearly on the shipping label of the box when returning the product. All products returned for credit are subject to a restocking charge without exception. Special order product are not returnable.

**Voided warranty:** The warranty does not apply if the original serial number has been removed or if the product has been disassembled or damaged through misuse, accident, modifications, use of incorrect power supply, use of a modified power supply or unauthorized repair.

**Shipping and handling:** Vaddio will not pay for inbound shipping transportation or insurance charges or accept any responsibility for laws and ordinances from inbound transit. Vaddio will pay for outbound shipping, transportation, and insurance charges for all items under warranty but will not assume responsibility for loss and/or damage by the outbound freight carrier. If the return shipment appears damaged, retain the original boxes and packing material for inspection by the carrier. Contact your carrier immediately.

**Products not under warranty:** Payment arrangements are required before outbound shipment for all out of warranty products.
