## > INTRODUCING THE 9500 SHELTER LIGHTING SYSTEM

Pelican's new 9500 Shelter Lighting System (SLS) uses 24 tough LED lamp modules to instantly switch from white to night vision-safe red light. Personnel can perform command and control duties while maintaining natural night vision and also reduce exposure to the enemy.

Military grade connectors link 3 in-line units which terminate in a 12V DC /120V AC converter. Power is via a generator-based supply or directly from a 12V DC source, including Pelican's 9430/60/70 series Remote Area Lighting System (RALS).

The 9500 SLS is tested to a 3 meter concrete drop-test, offering survivability

not found in florescent lighting. And because Pelican's proprietary LED lamp modules have an operating life of 50,000 hours, replacement bulbs are eliminated from the supply line.

The 210° beam spread provides 1,000 lumens of even white light, without the strobe and dimming found in current shelter lighting.

To see the growing family of RALS products, and to learn about Pelican's acquisition of Hardigg Industries, visit www.pelican.com/am.
