

eATVS-4 & eATVS-8™

AUTOMATIC TEMPERATURE AND VELOCITY SCANNER

The eATVS-4™ and eATVS-8™ Automatic Temperature and Velocity Scanners are portable, 4- and 8-channel hot wire anemometer systems. Fully automated, these research-quality instruments take accurate single- or multi-point measurements of air temperature, velocity and surface temperature in complex environments, such as PCBs and electronics enclosures. When used as temperature loggers, they can measure both fluid and solid temperatures.

Useable in rackmount or desktop configurations, eATVS-4™ and eATVS-8™ employ patented, fastresponse, omni-directional sensors, which measure both temperature and velocity. This patented single-sensor technology eliminates errors introduced as a result of air flow being non-isothermal. Each precisely calibrated sensor is flexible and robust with a low-profile configuration that allows minimally intrusive mounting throughout the peaks and valleys created by the PCB components. These systems require a PC to operate and utilize the stageVIEW™ software for data acquisition and reporting.
