

HOBOLink Service Plans - U30 Remote Monitoring System - Cellular, Wifi and Ethernet

These service plans provide 1 year of cellular data transmission and HOBOLink service for U30-GSM/C3G units and HOBOLink only plans for U30 Wi -Fi and Ethernet units. The plans start on the day the U30 is manufactured. 1 extra week is included in the first year of service to allow for time between when the unit is manufactured and received by the user.

U30 cellular service plans are limited to the data connection rates shown below. The Average Connection Interval and Alarms per Month are estimates of what you can expect in normal usage. If there are more frequent alarms or logger launches or if you have more than 8 sensors connected, these will reduce how frequently the U30 can connect. If the data used in particular month gets close to the limit, a warning will be sent. If the data left gets too low, HOBOLink will automatically turn off its connection service. Normal operation will resume the following month.

U30 Wi-Fi and Ethernet HOBOLink only plans are priced according to the frequency of data uploads required.
