Subject: PM06 personality Module

Dear Mark,

ADDISON Technology has finished the evaluation of Fluke Networks' Personality Module PM06 in conjunction with DSP-LIA101S Universal Permanent Link Adapter

We conducted extensive testing of different parameters on Permanent Link configuration and we obtained accurate and consistent result. Therefore, we highly recommend the use of the PM06 personality module for use in testing of all ADDISON Category 5E and Cat 6 cabling system products.

ADDISON Cabling System approves the DSP-PM06 personality Module as our preferred adapter for the testing of our Category 5E and Category 6 products and Fluke Testing requirement will be incorporated in our site testing manuals.

We look forward to continued cooperation in working with Fluke Network in the future and we would like to thank Fluke staff for their invaluable assistance during the testing.

Sincerely,

Anis Asghar
