Re : Fluke PM06 Approval

Dear Mr Schillab,

Infra+ has completed its evaluation of the Fluke Networks' Personality Module *PM06*, and approves the use of this module with the Fluke Networks' Universal Permanent Link Adapter for the certification of installed Category 6 cabling links constructed with Infra+ Category 6 certified Jack Modules (P/N 7700GE and 7700GU).

In June 2002 addendum No. 1 to TIA/EIA-568-B.2 discussing Transmission Performance Specifications for 4 -pair 100 ? Category 6 Cabling was approved. This document contained specific Category 6 de-embedded NEXT loss ranges that modular test plugs must meet. Fluke Networks responded to these new specifications by developing the *PM06*. The *PM06* is a shielded personality module that complies with modular test plug requirements.

Infra+ appreciates Fluke Networks' continued efforts to make standards compliant permanent link testing possible. Infra+ has full confidence that the Fluke DSP-4000 series tester used with the DSP-LIA101 Universal Permanent Link Adapter and the Personality Module *PM06* is a standards compliant permanent link testing solution for both shielded and unshielded installations.

Fluke Networks' Personality Module *PM06* will replace any previous Fluke Networks' Personality Module as the approved module for testing of the 7700GU unshielded Jack Module and 7700GE shielded Jack Module. These products will all be tested to the TIA Category 6 Permanent Link limits.

Please update Fluke Networks' Website, Technical Support Personnel and knowledge base to reflect the Infra+ approved test equipment and limits.

Regards,

Denis Kibler

Infra+ Chief Executive Officer
