Re: Fluke PM06 Approval

PANDUIT Corp. has completed it's evaluation of the Fluke Networks' Personality Module *PM06*, and approves the use of this module with the Fluke Networks' Universal Permanent Link Adapter for the certification of installed Category 6 cabling links constructed with *PANDUIT MINI-COM*[®] *TX-6*[™] *PLUS* Jack Modules and *DP6*[™] *PLUS* Patch Panels.

In June 2002 addendum No. 1 to TIA/EIA-568-B.2 discussing Transmission Performance Specifications for 4-pair 100 Ω Category 6 Cabling was approved. This document contained specific Category 6 de-embedded NEXT loss ranges that modular test plugs must meet. Fluke Networks responded to these new specifications by developing the *PM06*. The *PM06* is a shielded personality module that complies with modular test plug requirements. *PANDUIT* appreciates Fluke Networks' continued efforts to make standards compliant permanent link testing possible. *PANDUIT* has full confidence that the Fluke DSP-4000 series tester used with the DSP-LIA101 Universal Permanent Link Adapter and the Personality Module *PM06* is a standards compliant permanent link testing solution for both shielded and unshielded installations.

Fluke Networks' Personality Module *PM06* will replace any previous Fluke Networks' Personality Module as the approved module for testing of the *PANDUIT MINI-COM*[®] *TX-6*[™] *PLUS* Jack Module, *MINI-COM*[®] *TX-6*[™] *PLUS* Shielded Jack Module, and *DP6*[™] *PLUS* Patch Panel. These products will all be tested to the TIA Category 6 Permanent Link limits.

Please update Fluke Networks' Website, Technical Support Personnel and Knowledge base to reflect the *PANDUIT* approved test equipment and limits.
