Environmental Mission

Our vision and goal is a sustaining supplier, manufacturer and customer for the long term protection and preservation of our environment for future generations.

MISSION
To achieve this vision, we are dedicated to ensuring the health and wellbeing of all of our partners, reducing negative impact on the environment, and maintaining price structure by increasing efficiencies and reducing consumption.

JSI, and it's parent company, is an internal manufacturer and has been an environmentally conscious organization for more than 80 years.

We are proud to use wood as our primary sustainable material resource and all corporate policies and procedures support the efforts to "recover, recycle, reuse, repurpose, reduce, refuse, and re-engineer". In doing this, we are committed to the conservation of the environment and its natural resources as well as encouraging our suppliers and customers to do the same. A goal of a "Sustainable Partnership", supplier, manufacturer and customer, is essential for the long term protection preservation and sustainability of our environment for future generations.

LOCATION
Our manufacturing facilities are located in the center of Southern Indiana. With our diverse product offering and manufacturing capabilities, we provide a single source for all of your project needs allowing you to conserve our fossil fuels and reduce greenhouse gases.

PACKAGING
We place emphasis on the minimal use of disposable packaging while still providing adequate protection to the finished product. Our corrugated packaging is recyclable, reusable, and up to 100% recycled content. We reuse or recycle more than 175 tons of corrugated material annually.

REGULATORY
All of our manufacturing facilities are in compliance with applicable OSHA regulations and meet or exceed all applicable DEM and EPA regulations for air emissions, storm water and hazardous waste disposal.

MANUFACTURING FACILITIES
Our manufacturing facilities are geared toward eco-efficiency and are encouraged to continually improve and conserve. Solid wood not used in the direct manufacturing process is recovered for the operation of our dry kilns, thus reducing greenhouse gases, the use of fossil fuels, and the burden of waste placed on landfills. Composite panels not used in the direct manufacturing process are ground and sold for use as animal bedding and boiler fuel. In addition to other energy savings techniques, our manufacturing facilities use high efficient lighting, make use of power factor capacitors, and encourage all to conserve and reduce energy consumption and water usage. Condensation pumps are used to aid in water conservation as well as extending boiler life.

MANUFACTURING PROCESSES
Our finish processes utilize efficient spray guns and proper spray techniques to reduce wasted material. Excess finish material, solvents, and waste are recycled. Many of the assembly processes use water based glues that contain no hazardous ingredients.

TEXTILES
Many of our fabric options utilize up to 100% recycled content. Our leather alternative program includes selections that contain no toxic materials, plasticizers, heavy metals, or formaldehyde and have a 100% biodegradable back cloth. Some of the available panel fabric used, if discarded is a biological nutrient for the soil. Most of the components (foam, batting, and polycord) used in upholstered products are recyclable. Excess fabrics and leathers not utilized in the upholstery process go to recyclers and local charities for additional use.

WOOD
Wood is the most diverse, most process friendly, and most widely utilized natural resource in mankind's history. No other natural resource can match the environmental advantages of wood, including being renewable, recyclable, natural, carbon negative, and biodegradable. Utilizing the sun's energy, trees grow and remove carbon dioxide from the air while giving off oxygen to benefit the entire planet. Approximately 49% of wood's dry weight is carbon and harvesting mature trees in a sustainable forest, which has slowed in the absorption of carbon dioxide, allows the photosynthetic cycle to continue at full optimization and allow for the carbon to remain sequestered. We are proud to use wood as our primary "sustainable" renewable resource.

WOOD OPTIONS
Many environmentally friendly solid wood and engineered wood options are available for quote, including: Lyptus®, Plyboo®, reclaimed woods, agricultural and post-consumer waste fiber products, etc.

INDOOR AIR QUALITY
Our goal is to reduce the impact our products will have on the indoor air quality. We practice the latest technologies and utilize a third party to assure we meet this goal. GreenGuard, one of the leaders in IAQ certification, continues to certify our product offering with UL2818-GreenGuard Indoor Air Quality certification.

Unique Characteristic of Natural Woods and Veneers
JSI uses high quality wood and veneer harvested from sustainably managed forests. Every tree has unique and defining characteristics, like fingerprints. These characteristics can be defined by differences in color, grain configuration, and textures. These characteristics will be more noticeable if the product has a clear or lighter finish.

JSI uses select beech, cherry, maple, oak and walnut cut wood products to produce the desired look of our furniture products.

Maple and Cherry species have a higher degree of uneven distribution of grain, small color streaks, and pin knots.

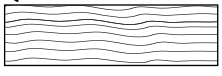

At JSI, we take care of selecting woods and veneers that are used in our products. With this in mind, we hope you appreciate the beauty of each tree's fingerprints. Products will not be replaced due to these natural characteristics.

Veneers can be sliced in a variety of ways to create unique patterns. JSI uses several different patterns, as shown below.

Flat (Plain) Cut as shown

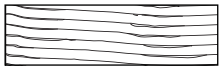

Quarter Sliced as shown

Double Cut as shown

Rift Cut as shown

Double Cut
The Double Cut veneer is a processed product that has at least two cuttings to create the final veneers. These cuts of veneer strands are dyed and layered into a block to create variation of patterns from a very tight grain pattern to an exotic figure grain pattern.

JSI offers two collection of veneer, our Essentials and Artisan Collections.

Essentials
The Essentials Collection allows users to specify beautiful veneers, without sacrificing budget, providing grain patterns and hues for maximum material flexibility and style range.

Artisan
The Artisan Collection provides a curated selection of finishes expressing an elevated style and contemporary nature.

Laminates (Veneer Series)
An alternative HPL (Higher Pressure Laminate) laminate work surface can be specified on most of our casegood product lines. The specification pages will also list the available coordinating finishes.

Laminate Series
JSI laminate series offer a full laminated product with imprinted grain to hide finger prints and provide durability. The worksurface tops are HPL (High Pressure Laminate) or TFL (Thermal Fused Laminate). TFL is used on the product's chassis.

An overview of finishes and laminates appear on page IV, detailing which species each veneer finish is applied to.

Series Material Offering
Select finishes, species and materiality are availble on a per series offering, with JSI curating the correct palette offering for the series intent. Please refer to each series feature highlights within the product pages to identify the material, species, grain patterns and finishes availble for that specific series.

JSI Core Materials
For projects requiring similar finishes across multiple series, JSI recommends using our Core Materials program. Finishes in this group are offered throughout the vast majority* of JSI products in the three main material categories Essentials and Artisan Veneer, Laminate and Solid Maple, in a spectrum of light to dark.

*note: not applicable to all series, for example BeSpace only offers clear veneer finish.

Finish - Top Coat
To reduce hazardous formaldehyde emissions, we use our proprietary specially designed top coat, DuraTex™. It significantly reduces hazardous formaldehyde emissions and helps improve indoor air quality.

Finish - Color/Stains
A wide range of stains are available to bring out the beautiful characteristics of each wood species. We coordinate finish color between our veneer stains and solid lumber stains; however, not all may be a perfect match. The stains are continually reviewed for accuracy of color, as well as a constant monitoring of the latest color trends in the furniture market.

Finish - Matching
Due to the natural characteristics of wood, environmental effects, and material upgrades, JSI cannot guarantee exact finish matches on existing furniture previously ordered.

If an exact match is required to accompany existing furniture, it must be specified at the time of order placement, so specific internal procedures can be followed to ensure a proper and acceptable finish match. We reserve the right to change our finish formula at any time to improve safety, quality, and appearance. Unless a finish match for existing furniture is requested at the time of ordering, we accept no liability for finish that may not match the existing furniture from prior orders.

Solid lumber may inherently have mineral streaks, pits, and various other natural occurrences. Care is taken in selecting the solid lumber to coordinate with the requested finish on our veneer products. This internal selection process is subject to availability of solid lumber parts.

Finish Sheen
All casegood veneer finishes are standard in 35-sheen, with the exception of Raven, which is only offered in 15-sheen. All other finishes are available in 15-sheen, with a 5% upcharge, per model.

Custom/Special Finishes
JSI, upon request, will accommodate special finishes. A written request is required to proceed with custom finish orders. A sample reference is required for first-time matches and must be included with the written request.

There is a charge of **$412 list per order** for any non-standard wood finish.

Orders will be entered noting the special finish. A sample match will be provided to the customer. Written approval is needed before the finish process can be started. Delays in approval may have an impact on lead times.

Every effort will be made to create the requested match; however, an acceptable match may not be possible because of natural variations of wood. These natural variations can also cause minor differences in the final finish product.

Use standard pricing and option pricing for each line item with a special finish, unless additional modifications have been specified. For items available in both Essential and Artisan veneers, apply the Essentials pricing.

Samples
Samples of standard wood finishes, paints colors, metal colors, and standard laminate are available upon request. The fastest way for requests to be filled is by using our website. See below for options to request samples.

Fire Retardancy
All JSI upholstered components comply with California Bureau of Home Furnishings and Thermal Insulation-Technical Bulletin 117-2013 issued by State of California Department of Consumer Affairs. This standard requires
upholstered furniture to be safer from the hazards associated with smolder ignition in all four (4) categories of materials, as applicable.

Compliance with more stringent codes may require special manufacturing considerations and upcharges.

California Technical Bulletin 133 (CAL 133)
JSI uses a barrier material between the foam cushioning and the upholstery cover in order to comply with CAL 133. The standard upcharge on products specified to comply with CAL 133 is **$88 list per yard** of textile.

JSI has performed a series of full scale fire tests on samples- representing worst case scenarios of upholstered units- to comply with the requirements of the state of California Technical Bulletin 133 (CAL 133). Products in compliance are labeled in accordance of the standards.

Some product designs and fabric cannot be combined to comply with CAL 133. Because of this, we reserve the right to reject any request for an upholstery cover, including COM, textile may not contain olefin or product style that we feel may compromise the integrity or safety of a product specified to comply with CAL 133.

Contact Customer Service for a quote if you require laboratory certification that a specific product and upholstery combination WILL PASS CAL 133. The quotation will include testing, video, and transportation charges plus the list cost of the sample.

Our standard lead time will apply to products that do not require certification. Allow an additional six weeks over the standard lead time for products that need actual laboratory certification.

The end user, specifier and/or dealer have the responsibility to make sure all products specified will meet the flammability and safety codes of the jurisdiction where the products will be located and used.

Flame Spread
All JSI may be required to comply with the requirements of Flame Spread based on ASTM standards/NFPA Life Safety Codes and general public knowledge are as follows:

Solid Wood- Class C
Topcoats- Class A
Carded Fabric- Class A
Composite Panels- Class C
Laminate- Class B

Plastics- According to the NFPA, the lack of stability of plastics under high temperature conditions and inherit combustibility have eliminated the use of plastics for applications requiring a flame spread rating.

Also be advised that improvements may be attained in certain instances with the addition of chemicals which may add additional costs, chemical exposure and/or compromise the integrity of the product.

Care and Maintenance

Care and Maintenance

Care of Upholstery Surfaces

Cleanability will vary based on the fabric type. For best results, a professional service is recommended. Dirt and crumbs may be gently brushed or vacuumed off. Spills should be wiped up immediately with a cloth. Vinyl textiles can be cleaned with warm soapy water and then wiped down with a warm damp cloth. For more details on any JSI carded fabric and vinyl, please visit our website at jsifurniture.com or consult the back of the appropriate swatch card for cleaning codes and any specific instructions. For COM materials, consult with the individual textile manufacturer for cleaning codes and any specific instructions pertaining to your particular fabric.

Maintenance of Mechanical Parts

Clean any lint or debris from the moving parts of the base mechanisms. Mechanisms have been designed and tested to not require lubrication under normal conditions; however, lubricant can be used if needed.

Care of Wood Edges and Veneer Surfaces

Clean all surfaces frequently with water dampened soft cloth, moving the cloth with the grain direction. Immediately remove any liquids that come in contact with wood surfaces with a blotting action to absorb liquid. Buff dry. Lift objects to move them, never pull them across the finished surface. For an additional safeguard, use a protective surface pad. This will ensure a lasting finish by protecting your furniture from possible damage caused by pens, cups and sharp objects. Avoid exposure of furniture to extremes of heat and cold, or to wide humidity variances. Avoid exposure of furniture to strong sunlight. Avoid exposure of furniture to harsh solvents such as nail polish remover, acetates, etc., as it will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breath.

Care of Metal Finishes

Wash you powder-coated item at least one every six months. Use soft rags only - No abrasives. For stubborn stains and grease marks, use soap and water mixture. Combine 1 gallon of water and 1 cup of the neutral detergent in the bucket. Mix it up by swirling one of the rags around in it. Wipe down the powder coat with a rag that has been dampened with the cleaning solution. Do not scrub, but use gentle, repetitive pressure to remove any built-up grime. Rinse the powder coat off with a rag dampened with clear, clean water. Do not spray it down, but rather wipe it off with the rag. You may need to do this several times to get all the soap off. Wipe the powder coat down with a clean dry rag. This will prevent streaking and spotting.

Care of Frosted Glass

Use a clean, dry lint free cloth to wipe the surface. Follow with warm water and a clean rag; no soap or chemicals. Wipe dry with a clean, dry lint free cloth. Cleaning the frosted side is not recommended, if desired to clean use the above method but do not spray the water on the frosted side, use a clean rag. Please allow 48 hours for the frosted side to dry and not to show cloudiness.

Tempered Glass Information

JSI is aware of occasional occurrences of spontaneous glass breakage in various furniture products. Tempered glass makes it stronger and if it breaks, will cause it to break into many small pieces of “cubes” rather than sharp and potentially dangerous shards.

Glass breakage in furniture may occur for a variety of reasons. Tempered glass is particularly prone to breakage from damage (scratches, nicks, etc.) that may occur during shipping, handling, installation, use or maintenance. Exposure to rapid changes in temperature or concentrated temperature zones may also cause breakage.

Tempered glass may also break due to a specific type of imperfection or “inclusion” that occurs within the glass when manufactured. When this condition exists glass breakage may occur without any obvious cause. This is often referred to as “spontaneous” breakage but is a very isolated occurrence in the glass industry.

Care of Dry Erase Boards

Erase after every use to eliminate ghosting. Clean weekly with a Dry Erase Cleaner. Avoid the use of orange and red Dry Erase Markers. Follow manufacturers cleaning instructions for the eraser. If ghosting or staining remains use a small amount of rubbing alcohol on a clean, soft towel to remove.

Care of Solid Surface

Although liquids cannot penetrate Solid Surface, it is best to wipe up spills as they occur. Generally, a damp microfiber cloth used with a standard household kitchen spray should remove most stains.

For most residues, all you need to clean your Solid Surface countertops is a warm soapy water, ammonia-based household cleaner or a dedicated countertop cleaner. Do avoid window cleaners; however, as they can leave a waxy build-up that dulls the surface. Always clean using a circular motion.

Film will build up on countertops if water is left to dry on the surface. This film will dull the countertop surface, making the finish appear blotchy and uneven. To prevent film build-up, it is very important to wipe the countertop completely dry immediately after spills and cleaning.

Some color of Solid Surface may require more frequent cleaning to maintain a uniform finish. Darker colors tend to require more attention than lighter colors. Over time, even with proper care, your countertop will acquire a sheen. Dark colors may show light scratches more readily.

Flux General Options

Laminate Products
Flux Laminate features TFL (thermally fused laminate) chassis, lockers and components. Main worksurfaces* are available in a HPL (high pressure laminate).

Eased edges of the worksurface are impact resistant (PVC) on HPL tops. The laminate is offered in wood grain patterns and solid colors. The wood grain laminate features an embossed grain to hide finger prints and light scratches. The solid laminate is smooth to the touch with a semi-matte finish. All Flux Laminate products are indoor-air certified by GreenGuard.

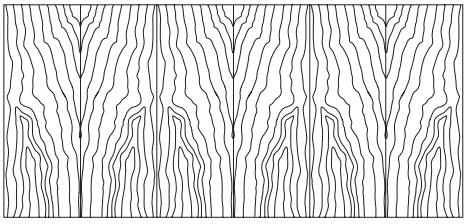

Laminate Worksurface Construction
Worksurfaces have a 3-ply balanced construction. Tops are 1 3⁄16″ thick with coordinating PVC edges. Primary worksurfaces feature 3mm PVC edges on the approach and user sides. Main worksurfaces are offered in HPL. Desk, bridge, return, and primary height credenza worksurfaces are profiled with a 3mm PVC edge on the user side only. Remaining edges are banded with 1mm PVC which creates a seamless appearance when units are mated end-to-end or back-to-back.

HPL Features on Main Worksurfaces*
- fusion of multiple layers create a higher impact resistant surface
- tops are 3-ply balanced construction
- matched to the TFL wood grain and solid patterns

Case Construction
Panels for chassis consist of a ¾″ thick substrate with TFL surfaces and PVC bands on exposed edges. Pedestal and cabinets are constructed with dowels reinforced with screw and interior plates for increased stability. Leveling glides are set into metal housing corner plate to allow for maximum leveling.

** Main Worksurfaces include tops on desks, primary height credenzas, returns, bridges and transaction tops. Refer to pricing pages to confirm availability.*

Veneer Products
Exterior wood surfaces are made from the finest selected veneers to achieve clarity and consistency in the Flux Veneer product line. To attain a pleasing, symmetrical pattern, all cherry, maple, black oak and walnut veneers in Flux Veneer are book-matched. All exterior solid lumber is matched to coordinate with the veneer.

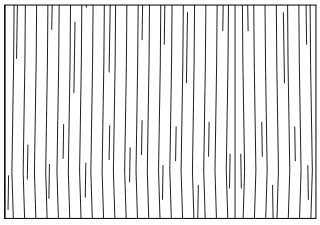

Veneer Book-Matched Example

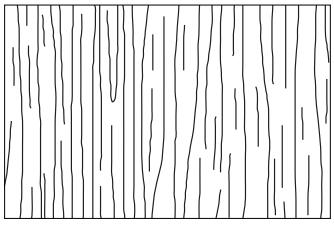

Alternating pieces of veneer are flipped over so they face each other like the pages within a book.

Flux Veneer is available in flat cut cherry, maple, black oak and walnut veneer. A wide range of wood stains have been formulated to enhance the beauty of the veneer.

Double Cut veneer is another choice on Flux Veneer product. This veneer is a processed product that has at least two cuttings to create the final veneers. These cuts of veneer strands are dyed and layered into a block to create a wide variety of patterns, from a very tight grain pattern to an exotic figure grain pattern. Linear grain patterns can be run vertical or horizontal. Please specify the grain direction.

Double Cut Veneer – Tight Grain

Double Cut Veneer – Natural Grain

Veneer Worksurface Construction
Tops are 3-ply balanced construction, 1 3⁄16″ thick with matching 1.5mm wood edges. Surfaces are available in wood veneer or high pressure laminate. No additional charge for using our coordinating high pressure laminate with a veneer grain pattern with finish wood edges.

Protective Top Coat
DuraTex™ offers exceptional hardness along with abrasion and impact resistance. It has been formulated to eliminate hazardous and harmful gases that are normally associated with wood finish.

DuraTex™ Features
- Safety - Significantly reduces hazardous formaldehyde emissions which help improve the quality of the of the indoor air we breathe.
- Quality - Developed to be tough and durable with special attention to appearance. The DuraTex™ finish preserves the natural beauty of wood.
- Durability - Designed to meet a wide range of demanding performance and environmental standards to withstand even the highest wear and tear.

Finish Sheen
All veneer finishes are standard in 35-sheen, with the exception of Raven. Raven is only offered in 15-sheen. All other finishes can have their sheen modified with a 15% upcharge added to the list price of each item.

Custom/Special Finishes
JSI, upon request, will accommodate special finishes. A written request is required to proceed with custom finish orders. A sample reference is required for first-time matches and must be included with the written request.

There is a one-time charge of **$412 list per order** for any non-standard wood finish.

Orders will be entered noting the special finish. A sample match will be provided to the customer. Written approval is needed before the finish process can be started. Delays in approval may have an impact on lead times.

Every effort will be made to create the requested match; however, an acceptable match may not be possible because of natural variations of wood. These natural variations can also cause minor differences in the final finish product.

Use standard pricing and option pricing for each line item with a special finish, unless additional modifications have been specified. For items available in both Essential and Artisan veneers, apply the Essentials pricing.

Placement Locations
The peninsula desk may mount flush to the back panel of the credenza, or offset 5″ to allow for an overhead hutch. Placement locations can be selected during field installation.

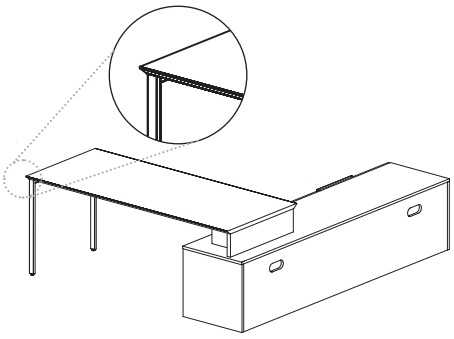

Placement 1 – Flush with Credenza Back
Can be used when no overhead storage is specified in the layout.

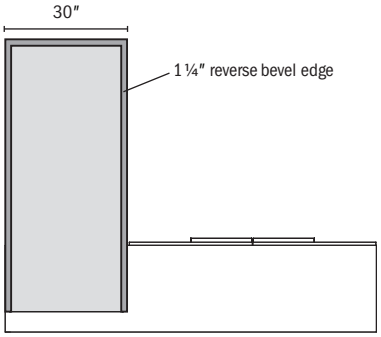

Placement 2 – Offset 5″ from Back Panel
Must be used when placing an overhead on the secondary credenza.

Note: the overall foot print grows by 5"

Reverse Bevel Edge Rules
A reverse bevel edge adds 1¼″ to the front of the desk top. Overheads that mount on the secondary credenza cannot be used with peninsula desks with reverse bevel edges. For more on edge profiles, see page 8.

Modular Components

Modular items can be created by **(1)** adding tops to modular units or **(2)** using a credenza shell with a modular credenza shell pedestal. Hardware is included.

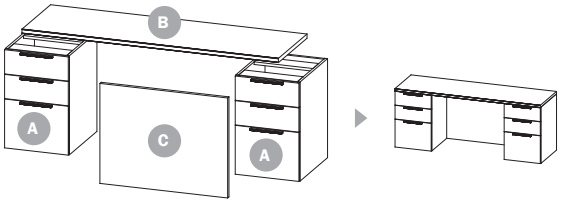

(1) Modular Top Construction

Example 1.1 – Open Corner Credenza

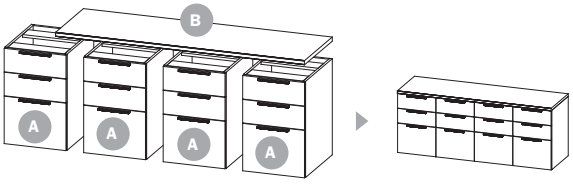

A = 36″w x 22″d modular lateral file
B = 72″w x 22″d modular primary height credenza top
C = 18″w x 22″d modular credenza wing end (left)
(Open spans over 48" require special consideration, consult with Customer Service)

Example 2.1 – Kneespace Credenza

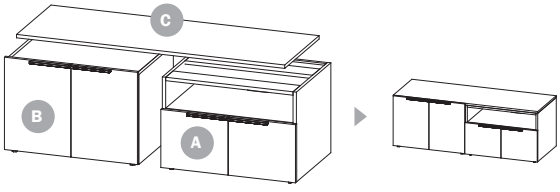

A = (qty 2) 18″w x 22″d modular pedestal
B = 72″w x 22″d modular primary height credenza top
C = 28″h x 36″w modular credenza modesty panel
(Open spans over 48" require special consideration, consult with Customer Service)

Example 3.1 – Storage Credenza

A = (qty 4) 18″w x 22″d modular pedestal
B = 72″w x 22″d modular primary height credenza top

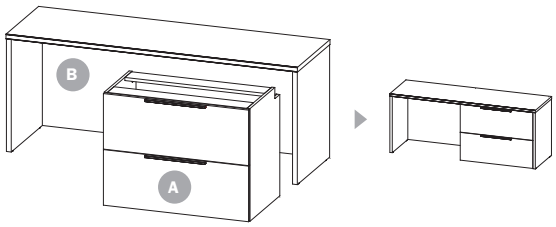

Example 4.1 – Secondary Height Credenza

A = 30″w x 22″d modular hinged door storage with open shelf
B = 30″w x 22”d modular hinged door storage
C = 60″w x 21″d modular secondary height credenza top

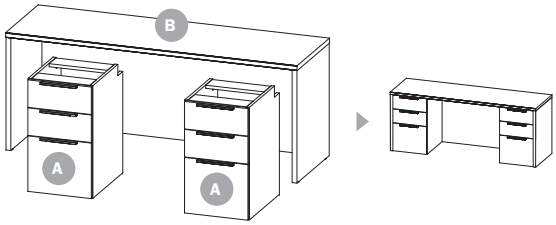

(2) Credenza Shell Construction

Example 1.2 – Open Corner Credenza

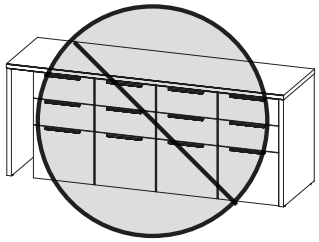

A = 36″w x 21″d modular credenza shell lateral file
B = 72″w x 22″d credenza shell
(Requires attachment to back of credenza and to underside of top)

Example 2.2 – Kneespace Credenza

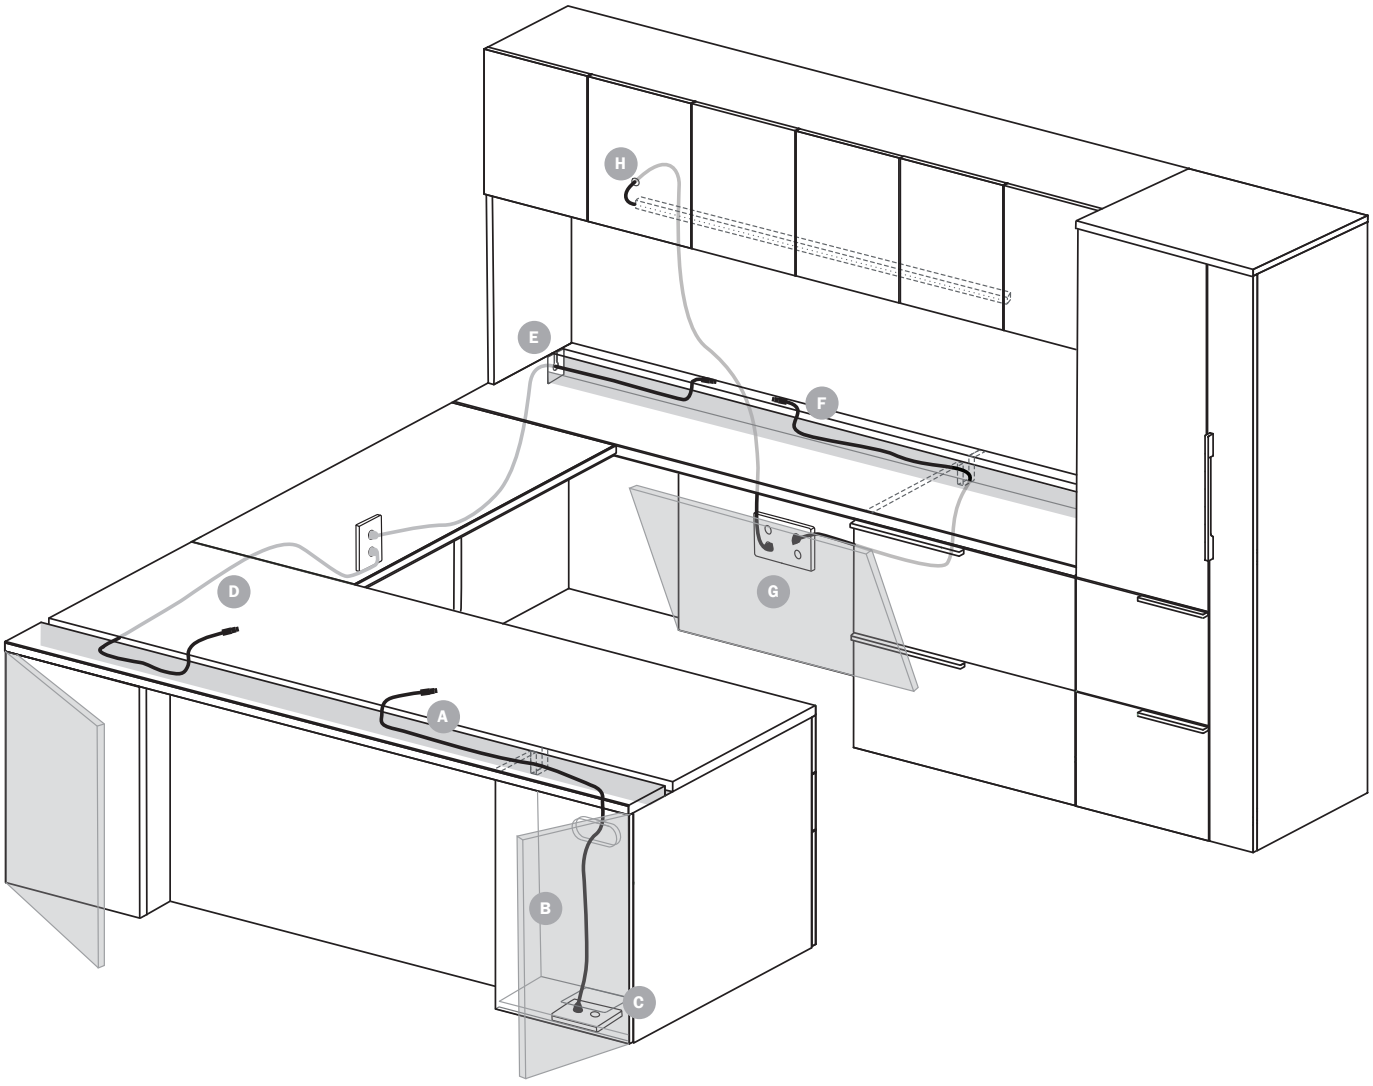

A = (qty 2) 18″w x 21″d modular credenza shell pedestal
B = 72″w x 22″d credenza shell
(Requires attachment to back of credenza and to underside of top)

There is no combination of modular components that will allow a credenza shell to be filled between end panels; kneespace or open corner is required.
