

MIERON is the world's first Virtual Reality NeuroTherapy program designed for physical, neurological & mental rehabilitation.

MIERON's subscription library of virtual reality experiences and responsive VR games incorporate neurorecovery, locomotive training, PT, OT, lateral movement, and core engagement in an easy to use app.

MIERON users have unlimited access to the entire Mieron library covering:

Gait Training, Core Engagement, Trunk Stability, Lateral Movement, Range of Motion, PNF Patterns, FES Compatibility, Head & Neck Mobility & Mental Wellness.

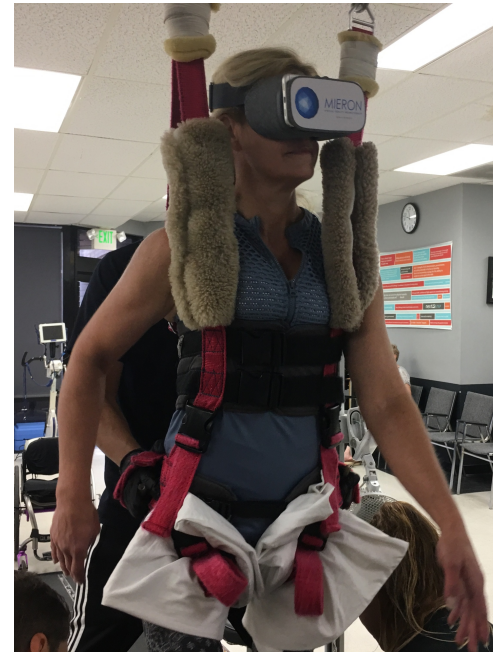

WHO WE TREAT: Spinal Cord Injury, Stroke, Paralysis, Cerebral Palsy, TBI, Parkinson's, Physical Therapy, Occupational Therapy, Anxiety, Depression & more!

PATIENT TESTIMONIALS:

"I found myself pushing my body farther than I thought I could because I wanted to participate in the VR experience."
– Ben, Stroke Victim

"I do not have great balance as a C6 quadriplegic SCI but I was not thinking about my balance issues when using Mieron - I was just accomplishing the given task."
-Brent Poppen, two-time Paralympic medalist

"I'm using Mieron while I'm getting a workout, but I'm not thinking about my workout. Before using Mieron I was overly-focused on my legs, and what I was trying to do... but then everything fell into sync [when I put Mieron on] and I was enjoying the experience of walking outside"
–Amanda Boxtel, paraplegic

PRACTITONER TESTIMONIAL:

"We like having MieronVR because of its **ease of use, and versatility**. The flood of sensory input that Virtual Reality provides our clients during their sessions encourages them to focus, internally, more on what their muscles are doing during any given activity. We have had several clients explain to us that they **feel more sensation in affected areas** during FES sessions with the RT300, from Restorative Therapies while using Mieron, and **we notice a more natural reciprocal arm motion during our gait training sessions**. The VR system has been used on-cycle, off-cycle, and with vibration training. It is even a great compliment to a number of arm activities that we use on our nes Xcite FES system. Mieron VR has become a great tool for us and we look forward to the possibilities it will afford our clients, and facility!"

– Chris Smith, Executive Director of Next Step Kansas City
