Work History

2018-08 - Current

Front End Developer

Matter Supply Co, Medellin, Antioquia

- Created and implemented a custom CSS grid system, with CSS media queries for mobile responsiveness.
- Javascript, HTML, and CSS.
- Programmed canvas in HTML5 to merge layers and create custom customizers

for our clients.

- Creation of different reusable React components fully responsive. Interaction with clients to gather requirements and set real expectations.
- Projects: impossiblefoods.com is a site developed by Matter Supply Co. In collaboration with Impossible Foods' digital team.
- The core technology stack consists of a so called JAM Stack to create an optimized static website (compiled with Gatsby), supported by a headless CMS (Contentful) and Cloud Functions (Google Cloud Functions).
- The core frontend is built around React JS and leverages Mapbox heavily for any mapping + geocoding functionality.
- The production version is hosted on Firebase Hosting, allowing for performant caching, leveraging Google's distributed delivery network.
- We also use Netlify for easy deployment for Staging + Development environments.
