

MINILOCK

NOTES AND RECOMMENDATIONS

ELECTRONICAL CAM LOCK WITH ROTARY BOLT

APPLICATIONS AND SUITABILITY

The PERSONALBOX can be optionally selected with a PIN code lock with keypad. The battery-operated lock with twist bolt is characterised by its compact, small design. It impresses with its low energy consumption. The 3V CR2450 button cell has a service life of approx. 10 years, depending on usage. The operating modes fixed assignment/regular user and free selection/multi-user can be set.

HOW IT WORKS

This electronic cam lock can be locked and unlocked with three different codes: 'user code, service code and master code'.

The factory settings are as follows: the user code is "1010" and the master code is '101010'. The service code is passive. Change your user and master codes and make a note of them. If you forget your codes, the lock will no longer be able to be opened!

- 1 Red and green LED light
- 2 Cam
- 3 Marking the closing position
- 4 Marking the free position
