

Changes to cable chains

All ranges

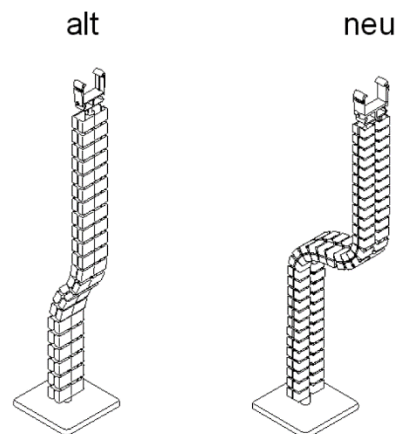

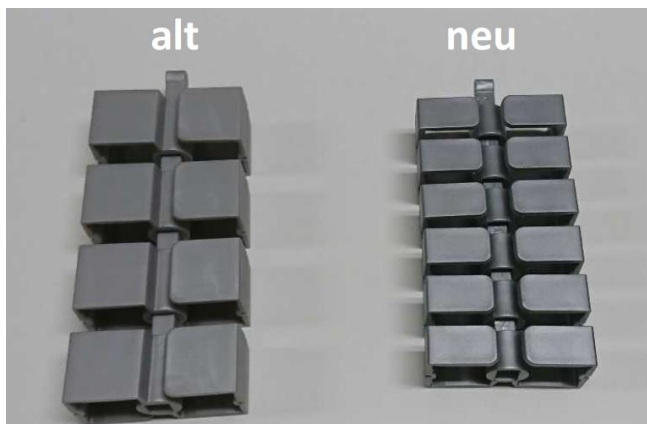

Changeover / scheduling

Can be ordered when new price list comes into effect on 1.2.2020

Seamless changeover

The cable chain supplier has optimised the cable chain design and function. The chain links have a tighter bend radius, making the chain easier to coil.

Change:

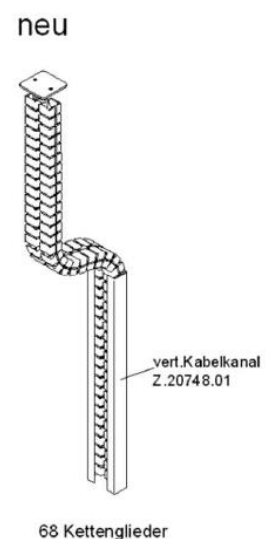

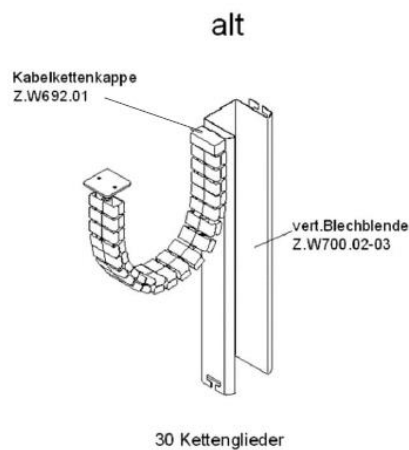

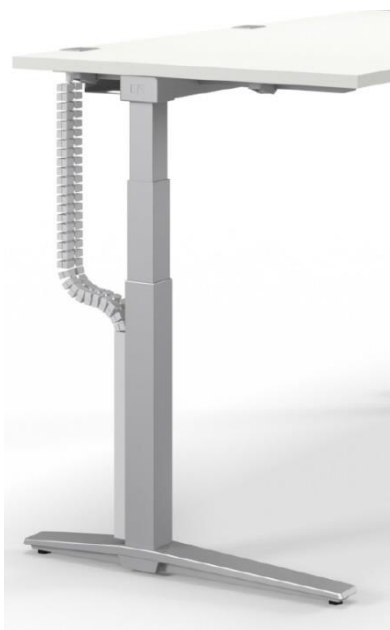

Number of chain links, old: Fixed/adj 30, lift/motor 40, bench centr. tray-cable tray 30

Number of chain links, new: Fixed/adj 40, lift/motor 68, bench centr. tray-cable tray 50

Changes to TALO.S lift desks and motorised desks

The changeover to this new fine-linked design means the cable management for TALO.S lift/motorised workstations will be optimised, too.

The current variant with cable trim and cable chain fitted with adapters will be discontinued. The new cable management will route the chain through a cable duct. The cable duct is attached to the frame without tools by means of an adhesive pad. The new variant guarantees more flexibility and in particular avoids annoying chain clashes when 800 mm desks are arranged back-to-back.

New product codes are available for ordering cable chains and cable ducts.
