PROGRAMMING

ARGUS

Argus Titan control system: designed to provide comprehensive monitoring and equipment automation throughout your facility.

AUTOW

Auto Watering System: hose bib connection controlled by programmable solenoid.

AUX

Auxiliary Circuits: programmable on/off output, provides an auxiliary switch, terminated in the control panel, for timed control of automatic watering, nutrient dosing, etc. Up to four switches available.

UPS

Controller UPS: surge protection and uninterrupted power supply, on controller only, for continuous operation of the controller during power interruptions.

CONSTRUCTION

Ebb & Flow Irrigation System: automatic control of irrigation system controlled through the control system.

FC.

Exhaust collar: allows connection to central exhaust system, measuring 4" (100mm).

Fresh Air: filtered inlet G3 type, washable, 100 cfm (48 l/s) providing a constant 4x air changes per hour.

GH

Extended growth and exterior heights.

RECP

Electrical Receptacles, Type & Location: wall mounted convenience electrical receptacle within growth area (2 amp allowance).

HEPA (call for availability) Exhaust HEPA filter: installed to the exhaust outlets made easily accessible for removal.

LIGHTING

HID

High Intensity Discharge: using metal halide and high pressure sodium lamps.

High light Intensity: using fluorescent and halogen incandescent lamps.

Various LED spectrum available allowing for a wide range of intensities. Dimming optional.

LMMCL

Lamps Incorporate Dimming Ballasts: programmable or manual adjustment of light intensity within the programmed range (as low as 5% with fluorescent, 25% with Metal Halide, 30% with High Pressure Sodium and 40% with Ceramic Metal Halide), to maximum intensity. Incandescent lamps are controlled in light levels.

Manual Dimmable Lighting System: manual adjustment of light intensity within the programmed range as low as 5% with fluorescent lamps, to maximum intensity. (call for availability)

Multi-Tier Operation: multi-tier shelving assemblies provide a maximum light intensity of 500 micromoles/m²/s each. (call for availability)

WCLL

Water-Cooled Lamp Loft: lamp heat removed by a dedicated water cooling coil.

TEMPERATURE

FSC

Circulation Fan Speed Control: programmable or manual fan speed control on conditioning unit, from 50% to maximum.

Low Temperature Operation: enables the chamber to be operated with lights ON to +2°C (No fresh air below 4°C.) A defrost cycle will occur resulting in a temperature increase (spike) for temperatures set below +8°C lights ON/OFF.

ULT

Ultra Low Temperature Operation: enables the chamber to be operated with lights ON to -10°C (No fresh air below 4°C.) A defrost cycle will occur resulting in a temperature increase (spike) for temperatures set below +8°C lights ON/OFF.

Sequential Defrost: multiple cooling coils with a sequenced defrost cycle to eliminate the temperature spike experienced with the standard defrost method.

REFRIGERATION

ACSC

Air-Cooled Self-Contained Condensing Unit: cabinet is supplied with an air-cooled, self-contained condensing unit with hot gas bypass system for continuous compressor operation and close temperature control. Condensing unit is located in the machine compartment.

RAC

Remote Outdoor Air-Cooled

Condenser: comes complete with all-weather housing, low ambient operation controls and low noise level operation.

OACU

Outdoor Air-Cooled

Condensing Unit: containing condenser, compressor, receiver, suction accumulator, control and pressure regulating valves and electrical disconnect.

WC.

Water-Cooled Condensing

Unit: cabinet is supplied with a water-cooled condensing unit with hot gas bypass system for continuous compressor operation, extended compressor life and close temperature control.

GLY

Chilled Water/Glycol Heating/

Cooling: cooling system designed to work with a central chiller refrigeration system.

Phenolic Coated Refrigeration

Coil: the evaporator coil is protected by a phenolic coating that is resistive to the corrosive effects of insect rearing.

DXLL

Refrigerant Cooled Lamp Loft: lamp heat removed by dedicated refrigeration cooling coil.

HUMIDITY

ASNH

Assisted Spray Nozzle

Humidification: additive humidity provided by siphon fed, air assisted atomizing spray nozzles. System requires reverse osmosis water.

Spray Nozzle Humidification: additive humidity through use of spray nozzles.

USH

Ultrasonic Humidification: uses an ultrasonic frequency to turn water into an airborne mist that is forced out into the air to raise humidity.

Bypass Dehumidification: a

precisely controlled volume of chamber air bypasses the heat exchanger by means of a proportionally controlled air damper.

Dehumidification by Chemical Dryer: chamber air is passed over a desiccant to remove moisture.

Separate Coil Dehumidification: mounted externally, draws air from the growth area through a cooling coil to remove the moisture by condensation.

CARBON DIOXIDE

CO₂

CO₂ Additive Control: package includes gas analyzer, CO₂ regulator (NA only), control valve and injection system. CO₂ tank not included.

CO2-BP

CO₂ Additive Back Pack: portable system is mounted on the side of the chamber as a standalone device complete with its own CO₂ process controller.

SCRUB

CO₂ Scrubber: allows for controlling CO₂ concentration levels below resultant conditions. Stand-alone device (floor or roof mounted).
