DRA5U48M1A

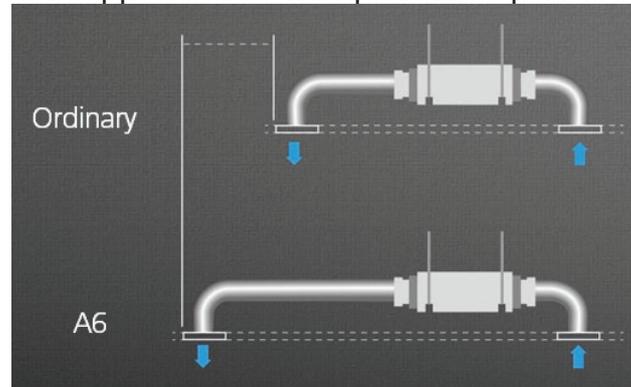

3. Functions

3.1 Slim Ducted Type

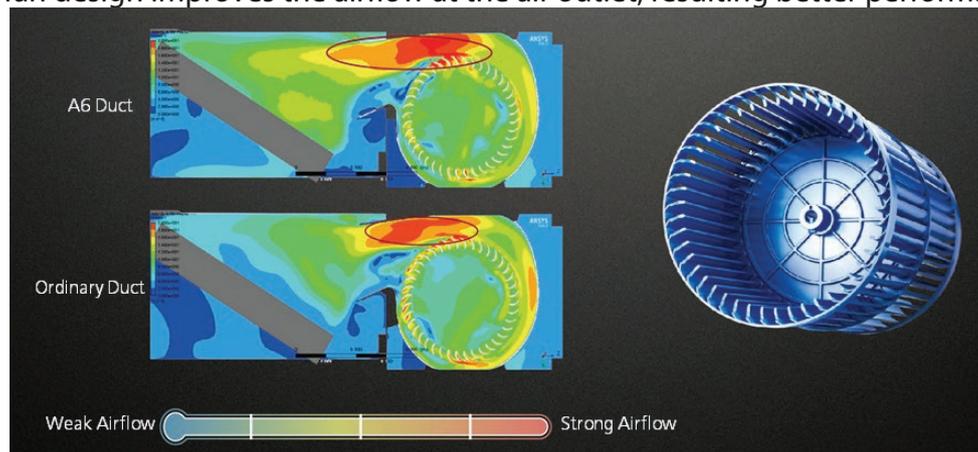

3.1.1 High Static Pressure

Capable to be installed in various applications that requires static pressure of 160Pa.

3.1.2 Eccentric Fan Design

New eccentric fan design improves the airflow at the air outlet, resulting better performance.

3.1.3 Slim Design

The industry lowest height is designed to be fitted into tight roof space.

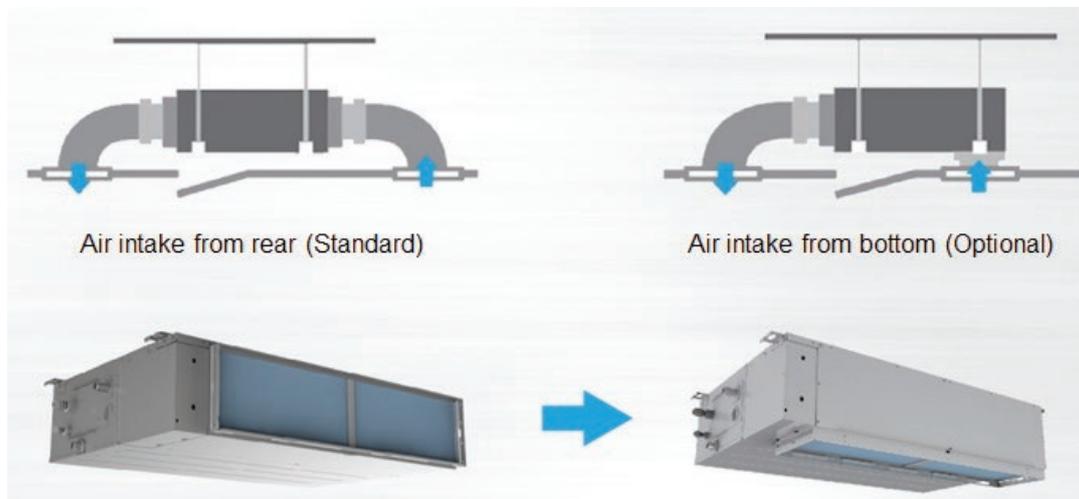

3.1.4 2 Types Installation

Two types of installation methods can be selected: ceiling concealed and floor concealed(optional)

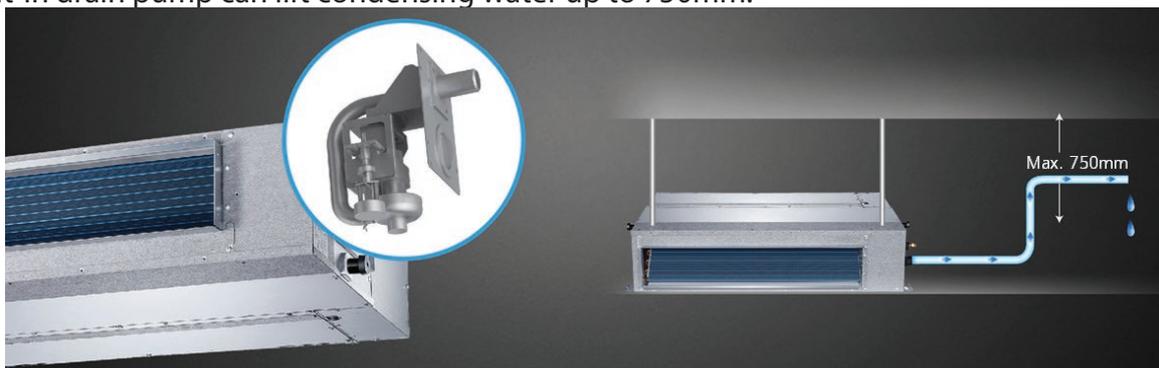

3.1.5 Flexible Air Intake

The frame size of air inlet in rear and bottom is the same. It's very easy to switch to match different applications.

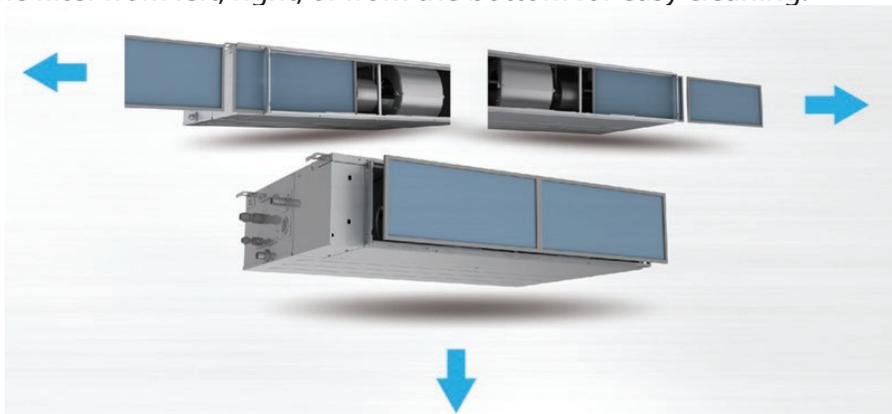

3.1.6 Built-in Drain Pump

The built-in drain pump can lift condensing water up to 750mm.

3.1.7 Easy Clean

You can pull out the filter from left, right, or from the bottom for easy cleaning.

3.2 Cassette Type

3.2.1 Compact design

- The body size is 570×260×570mm, it's just smaller than the ceiling board, so it's very easy for installation and will not damage the decoration. The panel size is 647×50×647mm.
- The hooks are designed in the four corners of the body, which can save installation space.

3.2.2 Fire-proof Controller Box

- Electrical control box adopts new design which can meet higher fire safety requirements.

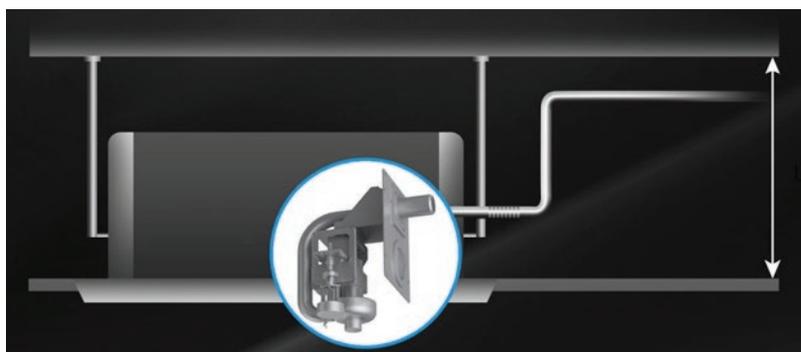

3.2.3 Reserved remote on-off and alarm ports (Optional for fixed-speed units, standard for inverter units)

- Remote on-off: With the reserved ports, a remote switch can be easily connected to realize remote control.
- Alarm: The built-in PCB can output alarm signal, which achieve setting up an external alarm light or vibration gauge possible.

3.2.4 Build-in Drain Pump

- The drain pump can lift the condensed water up to 750mm.
- It's convenient to install drainage piping under most space condition.

3.2.5 Fresh Air

- Fresh air intake function brings you fresh and comfortable air feeling.

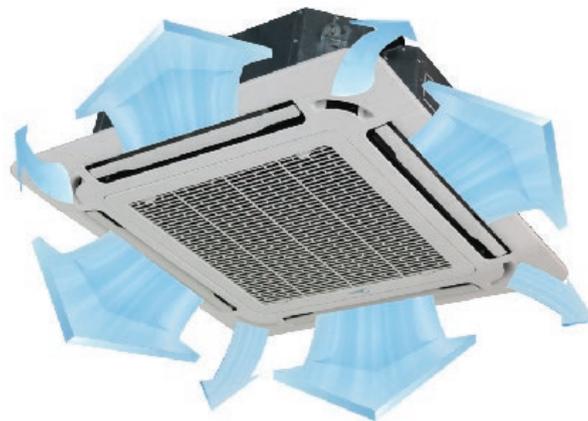

3.2.6 Wired Controller(Optional)

- Compared with infrared remote controller, wired controller can be fixed on the wall and avoid mislaying. It's mainly used for commercial zone and makes air conditioner control more convenient.

3.3 24K Cassette Type

3.3.1 360° Air Flow

- 360°directional wind can deliver air evenly throughout every corner in any space, reducing hot and cold spots in the room.

3.3.2 Independent Vane Control

- There are 4 air deflectors at each of sides with the cassette unit which enable it to change the air flow direction of any side independently as needed.

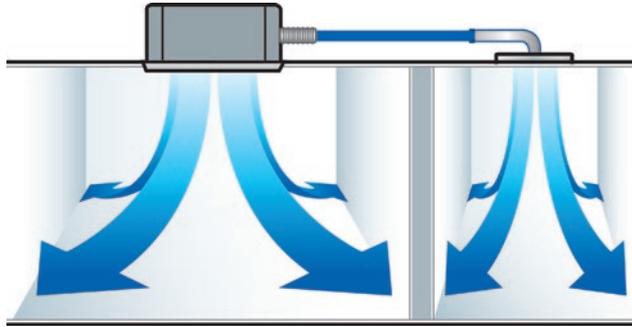

3.3.3 Easy Installation

- The Cassette is much slimmer due to the redesigned heat exchanger and overall structures. It now requires less space for installation.

3.3.4 Reserved Air Outlet for Duct

- The cassette unit is equipped with reserved connection for air outlet at the side of the indoor unit. It can connect to an air duct to cool a small room nearby.

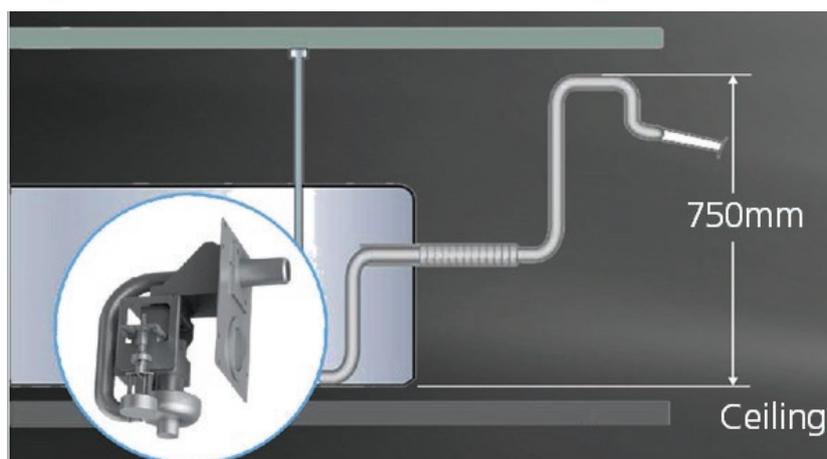

3.3.5 Reserved remote on-off and alarm ports (Optional for fixed-speed units, standard for inverter units)

- Remote on-off: With the reserved ports, a remote switch can be easily connected to realize remote control.
- Alarm: The built-in PCB can output alarm signal, which achieve setting up an external alarm light or vibration gauge possible.

3.3.6 Build-in Drain Pump

- The drain pump can lift the condensed water up to 750mm. Which is convenient to install drainage pipes under most conditions. The drainage pipe can be installed on either the left or the right side.

3.3.7 Fresh Air

- Fresh air intake function brings you fresh and comfortable air feeling.

3.3.8 Wired Controller(Optional)

- Compared with infrared remote controller, wired controller can be fixed on the wall and avoid mislaying. It's mainly used for commercial zone and makes air conditioner control more convenient.

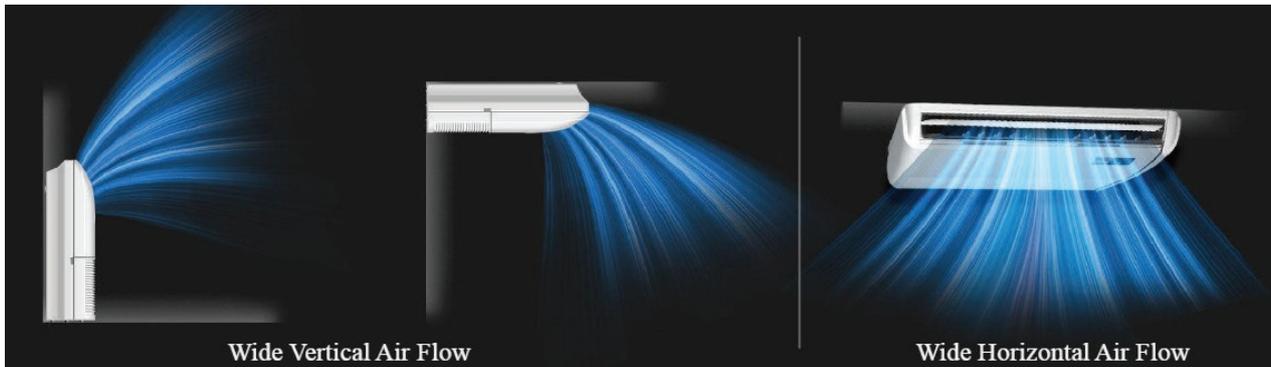

3.4 Floor Ceiling Type

3.4.1 Easy installation- 2 Style Installation

- Fashionable design and streamline appearance, suitable for different room style.

3.4.2 3D Airflow

- Vertical air flow and horizontal airflow can be adjusted by remote controller to direct air flow to every corner of the room.

3.4.3 Easy Maintenance-Universal Spare Parts

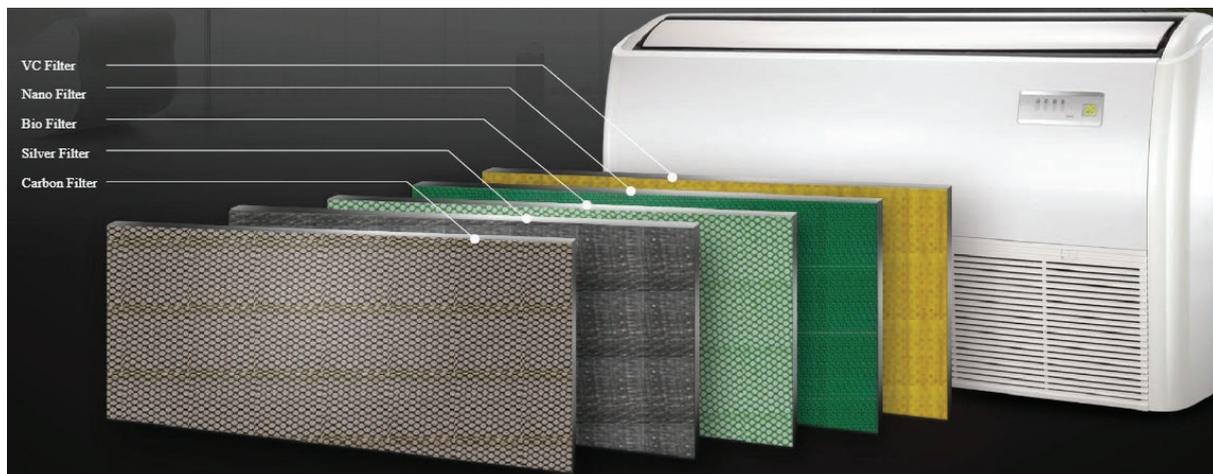

- More than 60% parts and assemblies (such as fan wheel, plastic cases, metal parts etc.) are universal for 3 different bodies, which makes maintenance much easier.

3.4.4 Fresh Air

- Fresh air intake function brings you fresh and comfortable air feeling.

3.4.5 Healthy Filters(Optional)

- Varies of healthy filters can be chosen to fix on the machine.

3.5 Wall Mounted Type

3.5.1 Powerful Cooling

- The optimized indoor and outdoor unit design improves cooling performance and generate a strong air flow as long as 12m and air speed $\geq 0.3\text{m/s}$, keeping your entire room cool all through the summer.

3.5.2 3D Air Flow

- The unit has horizontal swing and auto vertical swing function, which supplies more even and comfortable air flow.

3.5.3 Golden Fin

- The unique anticorrosive golden coating on the heat exchangers can withstand the salty air, rain and other corrosive elements. It also effectively prevents bacteria from breeding and improves heat efficiency.
- After one year of operation, the prototype with golden coating shows better performance in all working conditions than the prototype with blue coated foil.
- Dry-wet cycle tests 3000 times (equivalent to using an air conditioner for 10 years): the golden fin still has good hydrophilicity (hydrophilic angle $\leq 30^\circ$).

3.5.4 Fireproof Electronic Control Box

- The electric control box uses ABS material with a 5VA flame retardant rating, and the outer surface is covered with sheet metal, which isolates the electric control box from fire.

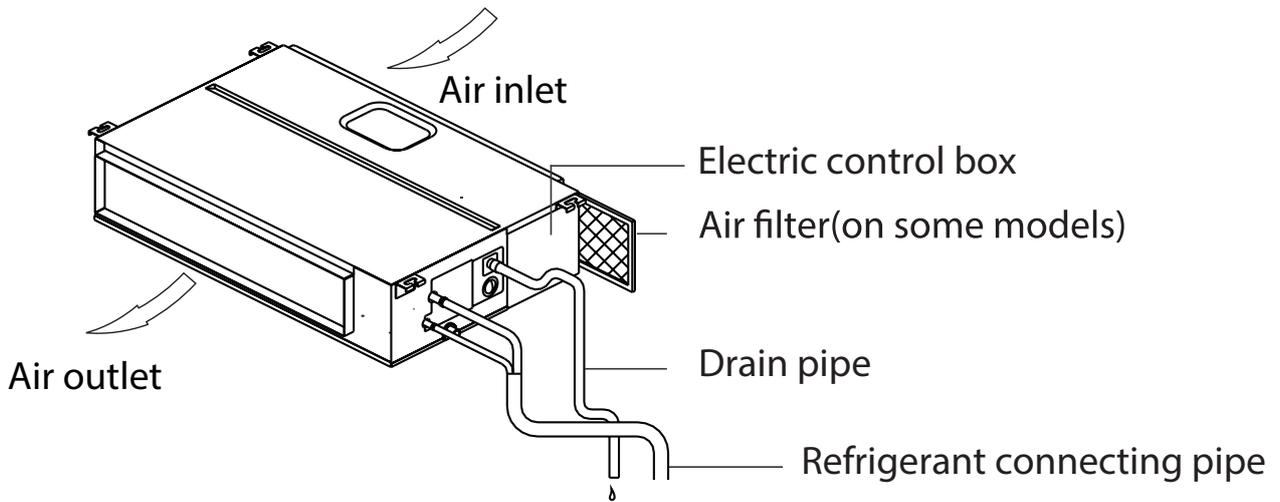

3.5.5 ECO mode

- The air conditioner is equipped with the ECO energy-saving technology, which perfectly synergized with highly efficient inverter technology. You can indulge in comfortable coolness while significantly reducing energy consumption over 8 hours.

Power Supply (Outdoor)		V-Ph-Hz	208~230-1-60	208~230-1-60	208~230-1-60	208~230-1-60
Max. input consumption		W	3030	3550	4600	5550
Max. current		A	14.5	17	21.5	26.5
Compressor	Model		ATM150D23UFZ	ATF235D22UMT	ATF310D43UMT	ATQ360D1UMU
	Type		ROTARY	ROTARY	ROTARY	ROTARY
	Brand		GMCC	GMCC	GMCC	GMCC
	Capacity	Btu/h	15388	24345	32380	38214
	Input	W	1170	1970	2600	3040
	Rated current(RLA)	A	8.1	6.95	5.1	5.9
	Locked rotor Amp(LRA)	A	/	/	/	/
	Thermal protector position		NA	NA	NA	NA
	Capacitor	µF	/	/	/	/
Refrigerant oil	ml	VG74/500	VG74/670	VG74/1000	VG74/1400	
Outdoor fan motor	Model		ZKFN-50-8-2	ZKFN-120-8-2	ZKFN-120-8-2	ZKFN-85-8-22
	Qty		1.0	1.0	1.0	2.0
	Input	W	115.0	150.0	150.0	126.0
	Capacitor	uF	/	/	/	/
	Speed	r/min	800/650/550	900/750/600	900/750/600	800/700/600
Outdoor coil	Number of rows		2.0	1.6	2.0	2.0
	Tube pitch(a)x row pitch(b)	mm	25.4x22	25.4x22	25.4x22	25.4x22
	Fin spacing	mm	1.4	1.3	1.3	1.4
	Fin type (code)		Hydrophilic aluminum	Hydrophilic aluminum	Hydrophilic aluminum	Hydrophilic aluminum
	Tube outside dia.and type	mm	Φ9.52,Inner groove tube	Φ9.52,Inner groove tube	Φ9.52,Inner groove tube	Φ9.52,Inner groove tube
	Coil length x height x width	mm	730x660x44	1005x762x22+580x762x22	995x762x44	990x1270x44
Number of circuits		4	4	4	8	
Outdoor air flow		m3/h	1390	3620	3650	7650
Outdoor sound pressure level		dB(A)	58	61.5	62.5	63
Throttle type			Capillary+EXV	Capillary+EXV	Capillary+EXV	Capillary+EXV
Outdoor unit	Dimension(W*D*H)	mm	845x702x363	946x810x410	946x810x410	952x1333x415
	Packing (W*D*H)	mm	965x775x395	1090x885x500	1090x885x500	1095x1480x495
	Net/Gross weight	Kg	48/52	69/73	71/76	101.5/115.7
Refrigerant type	Type	-	R410A	R410A	R410A	R410A
	Charged quantity	Kg	70.5	98.8	105.8	162
Design pressure		MPa	4.2/1.5	4.2/1.5	4.2/1.5	4.2/1.5
Refrigerant piping	Liquid side/ Gas side	mm(inch)	2 x Φ6.35/Φ9.52(1/4"/3/8")	3 x Φ6.35/Φ9.52(1/4"/3/8")	4 x Φ6.35/3x Φ9.52+1xΦ12.7 (4x1/4"/3x3/8"+1x1/2")	5 x Φ6.35/3x Φ9.52+2xΦ12.7(5x1/4"/3x3/8"+2x1/2")
	Max. length for all rooms	m	40	60	80	80
	Max. length for one indoor unit	m	25	30	35	35
	Max. height difference between indoor and outdoor unit	m	15	15	15	15
	Max. height difference between indoor units	m	10	10	10	10
Ambient temperature	Cooling	°C	-15~50	-15~50	-15~50	-15~50
	Heating	°C	-15~24	-15~24	-15~24	-15~24

Notes:

1) Capacities are based on the following conditions:

Cooling: - Indoor Temperature 26.7°C(80°F) DB /19.4 °C(67°F) WB Heating: - Indoor Temperature 21.1°C(70°F) DB / 15.6°C(60°F) WB
 -Outdoor Temperature 35 °C(95°F) DB /23.9 °C(75°F) WB -Outdoor Temperature 8.3°C(47°F) DB / 6.1°C(43°F) WB
 -Interconnecting Piping Length 7.5m - Interconnecting Piping Length 7.5 m
 - Level Difference of Zero. - Level Difference of Zero.

2) Capacities are net capacities.

3) Due to our policy of innovation some specifications may be changed without notification .

6. Indoor Unit Combination

10.3 Outdoor Unit PCB Board

Main PCB board of DRA2U18M1A, DRA3U28M1A

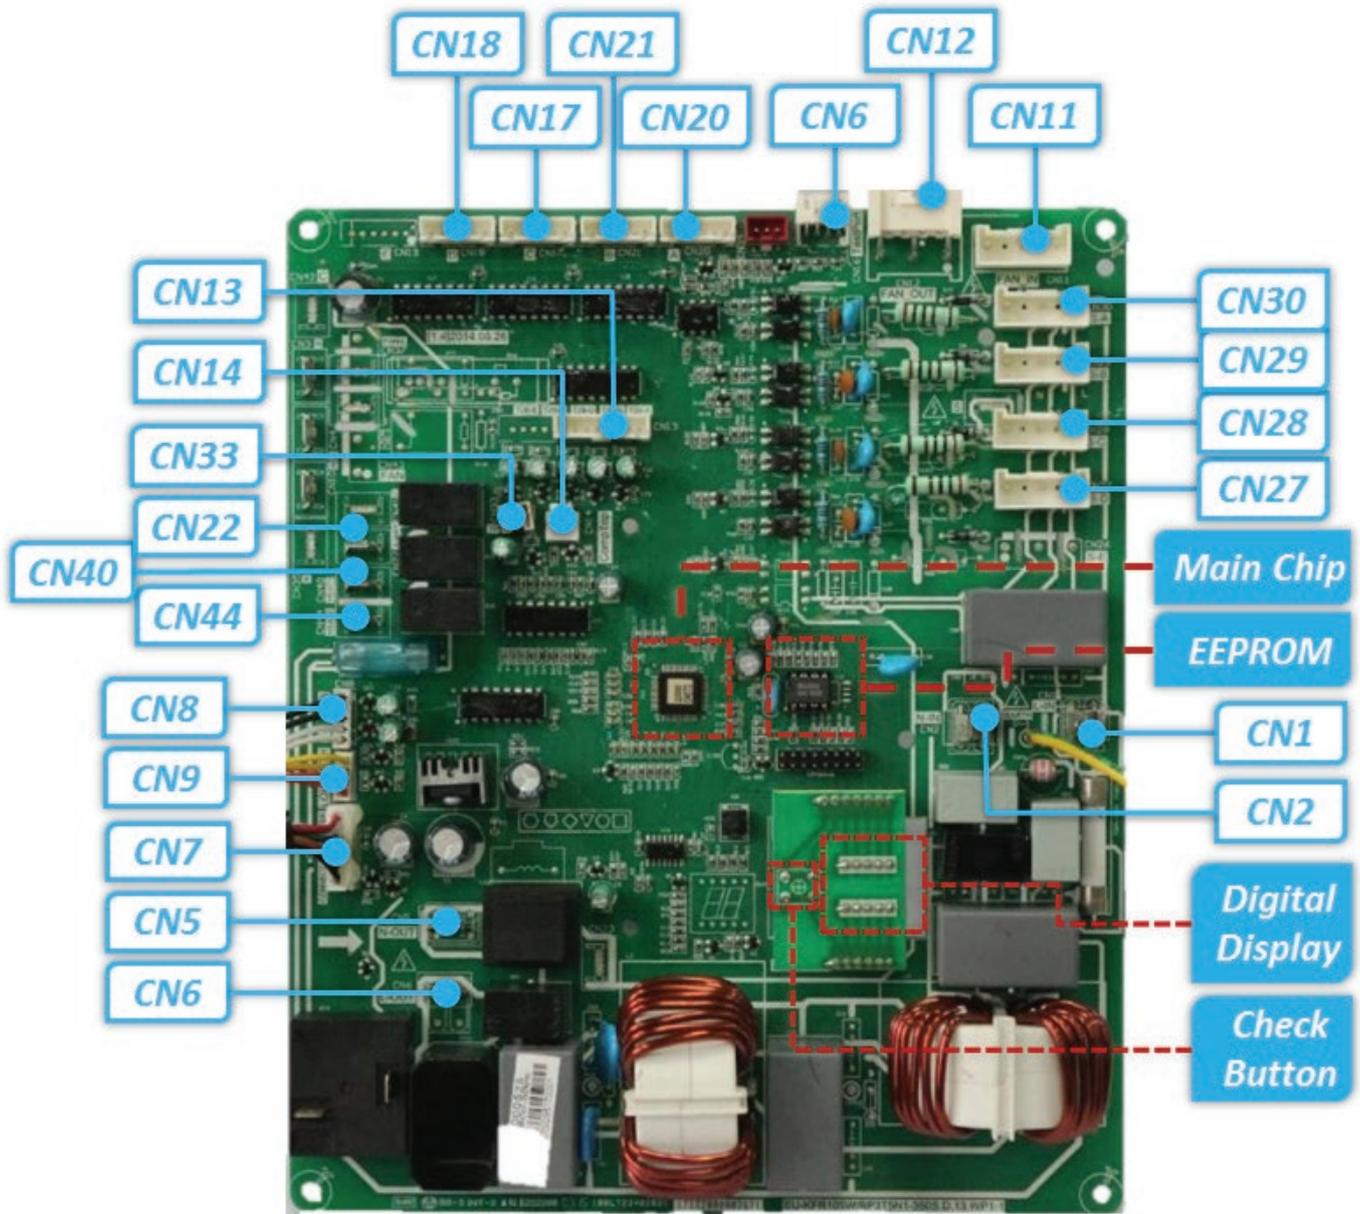

Specifications

Port	Description	Parameter
CN20	Power and communication with IDU C	230V/AC
CN23	Power and communication with IDU B	230V/AC
CN25	Power and communication with IDU A	230V/AC
CN1	Power output for 4-way valve	230V/AC
CN6	Power output for compressor heater	230V/AC
CN3	Port for L-in	230V/AC
CN9	Power output for chassis heater	230V/AC
CN4	Port for N-in	

CN29	N-out for IPM board	
CN37	L-out for IPM board	230V/AC
CN28	Power output for evaporator outlet (T2B) temperature sensor	5V/DC
CN26	Port for test board	5V/DC
CN7	Power output for discharge (T5) temperature sensor	12V/DC
CN21	Power output for condenser (T3), ambient (T4) temperature sensors	5V/DC
CN22	Power output for EEV C	0-200V/AC
CN19	Power output for EEV B	
CN18	Power output for EEV A	

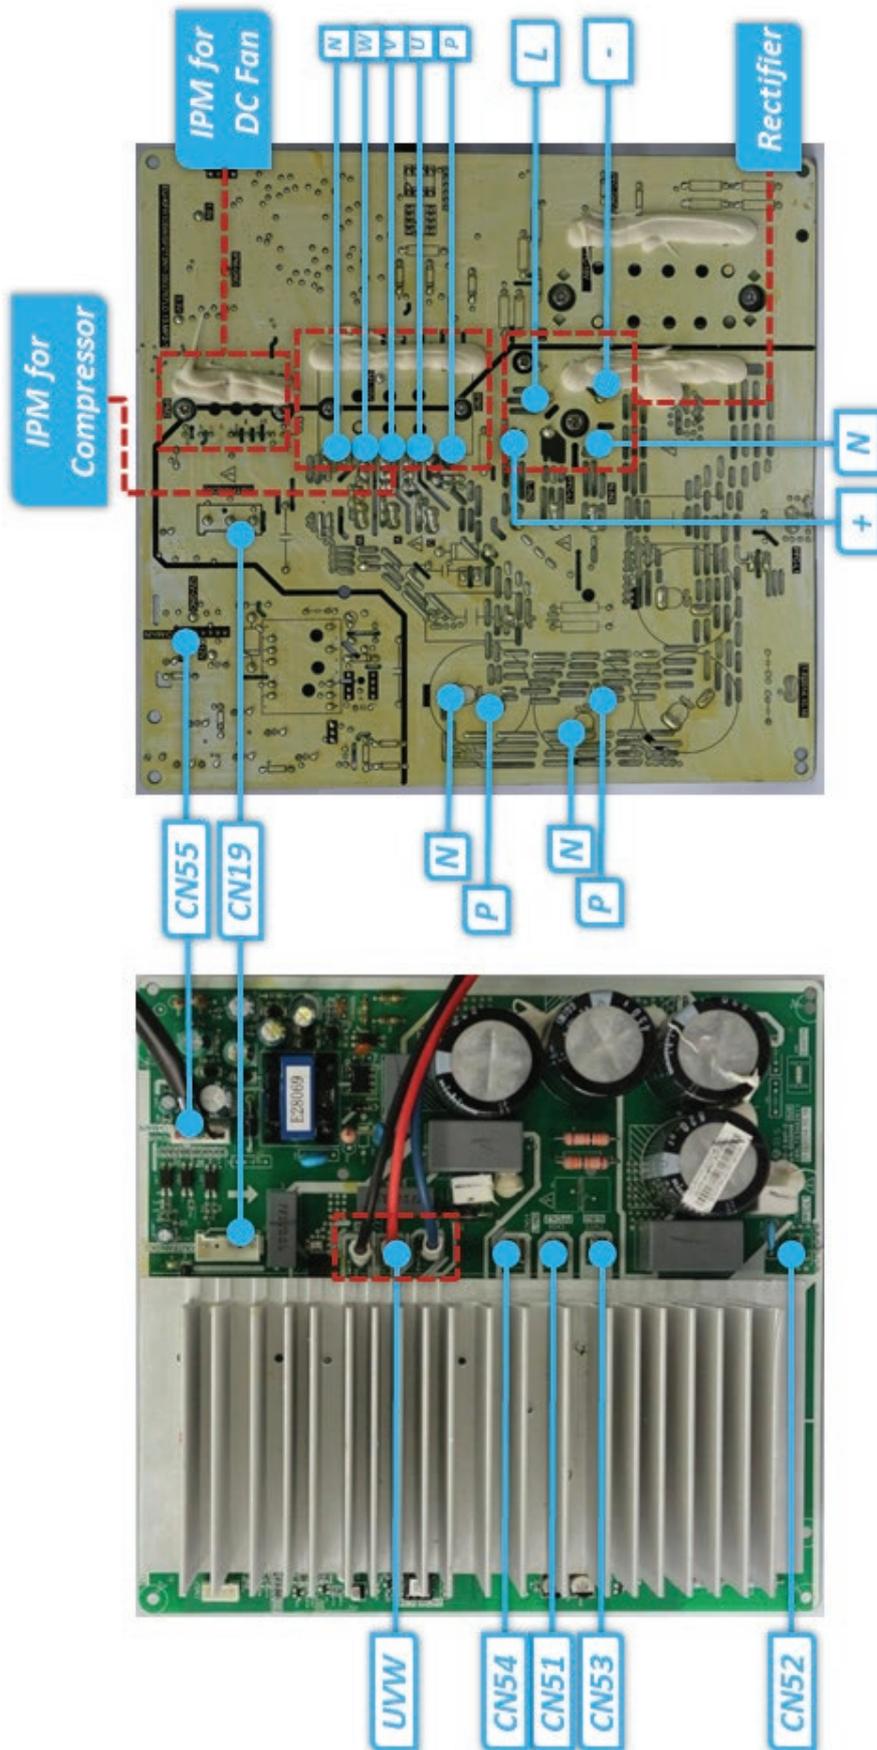

Port	Description	Parameter
CN14	Output for DC fan	
CN1	Communication port with main board	5V, 12V/DC
CN2	Connection ports for reactor	320V/DC
CN3		
CN5	N port for AC input	5V/DC
CN4	L port for AC input	230V/AC

Main PCB board of DRA4U36M1A

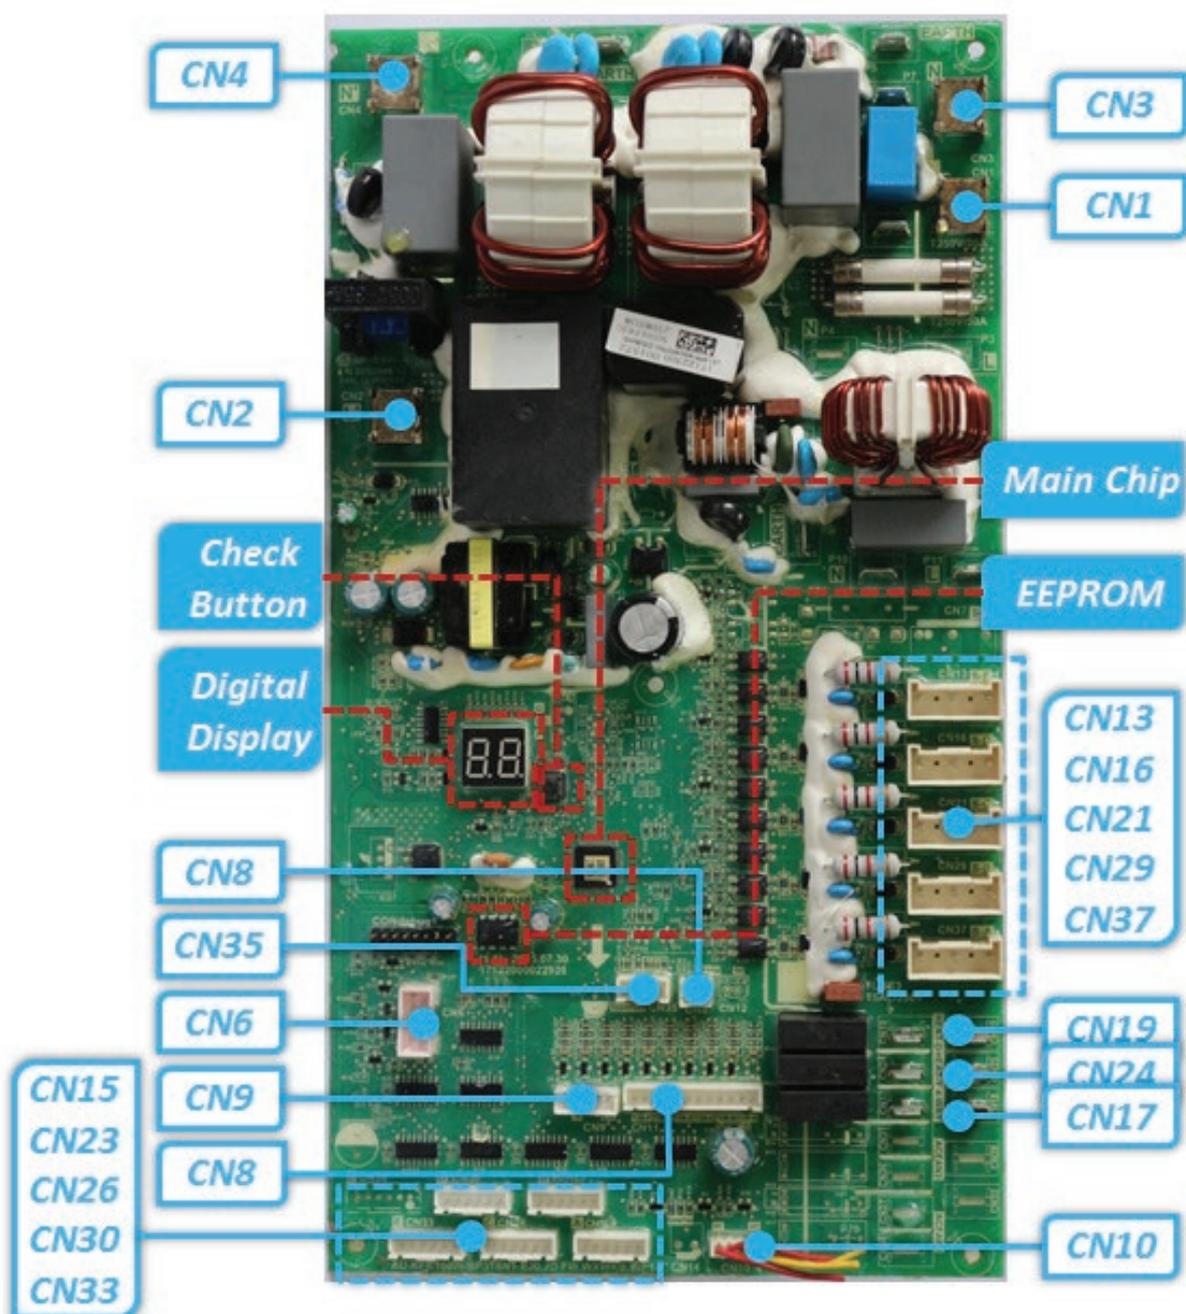

Port	Description	Parameter
CN27-30	Power and communication with IDU A-D	230V/AC
CN1, CN2	Power input for this PCB	230V/AC
CN6, CN5	Power output for IPM board	230V/AC
CN7	Port for communication with IPM board	5V/DC
CN9	Port for Hi-pressure and low-pressure switches	
CN8	Power output for condenser (T3), ambient (T4) temperature sensors	5V/DC
CN44	Power output for compressor heater	230V/AC
CN40	Power output for chassis heater	230V/AC
CN22	Power output for 4-way valve	230V/AC
CN33	Power output for discharge (T5) temperature sensor	5V/DC
CN14	Port for compressor top high temperature protector	
CN13	Power output for evaporator (T2B) temperature sensor of IDU A-D	5V/DC
CN17-21	Power output for EEV A-D	12V/DC
CN6	Port for test board	5V/DC
CN12	Output for DC fan	
CN11	Input for DC Fan	

IPM board of DRA4U36M1A

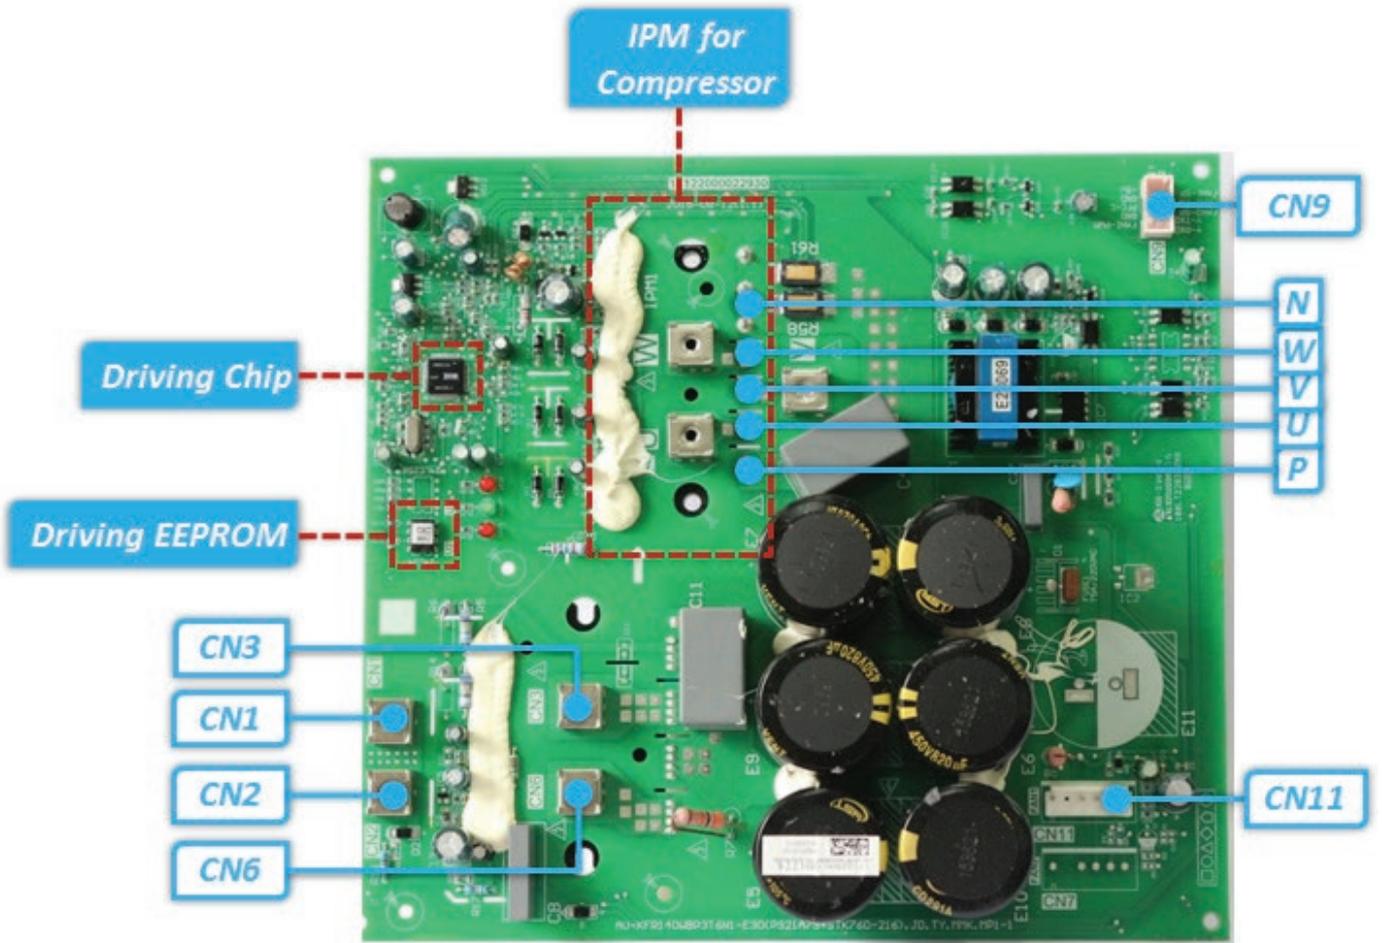

Port	Description	Parameter
CN19	Output for DC fan	
CN55	Communication port with main board	5V, 12V/DC
CN51	Connection ports for reactor	320V/DC
CN52		
CN53	N port for AC input	5V/DC
CN54	L port for AC input	230V/AC
UVW	Output for compressor	

Main PCB board of DRA5U48M1A

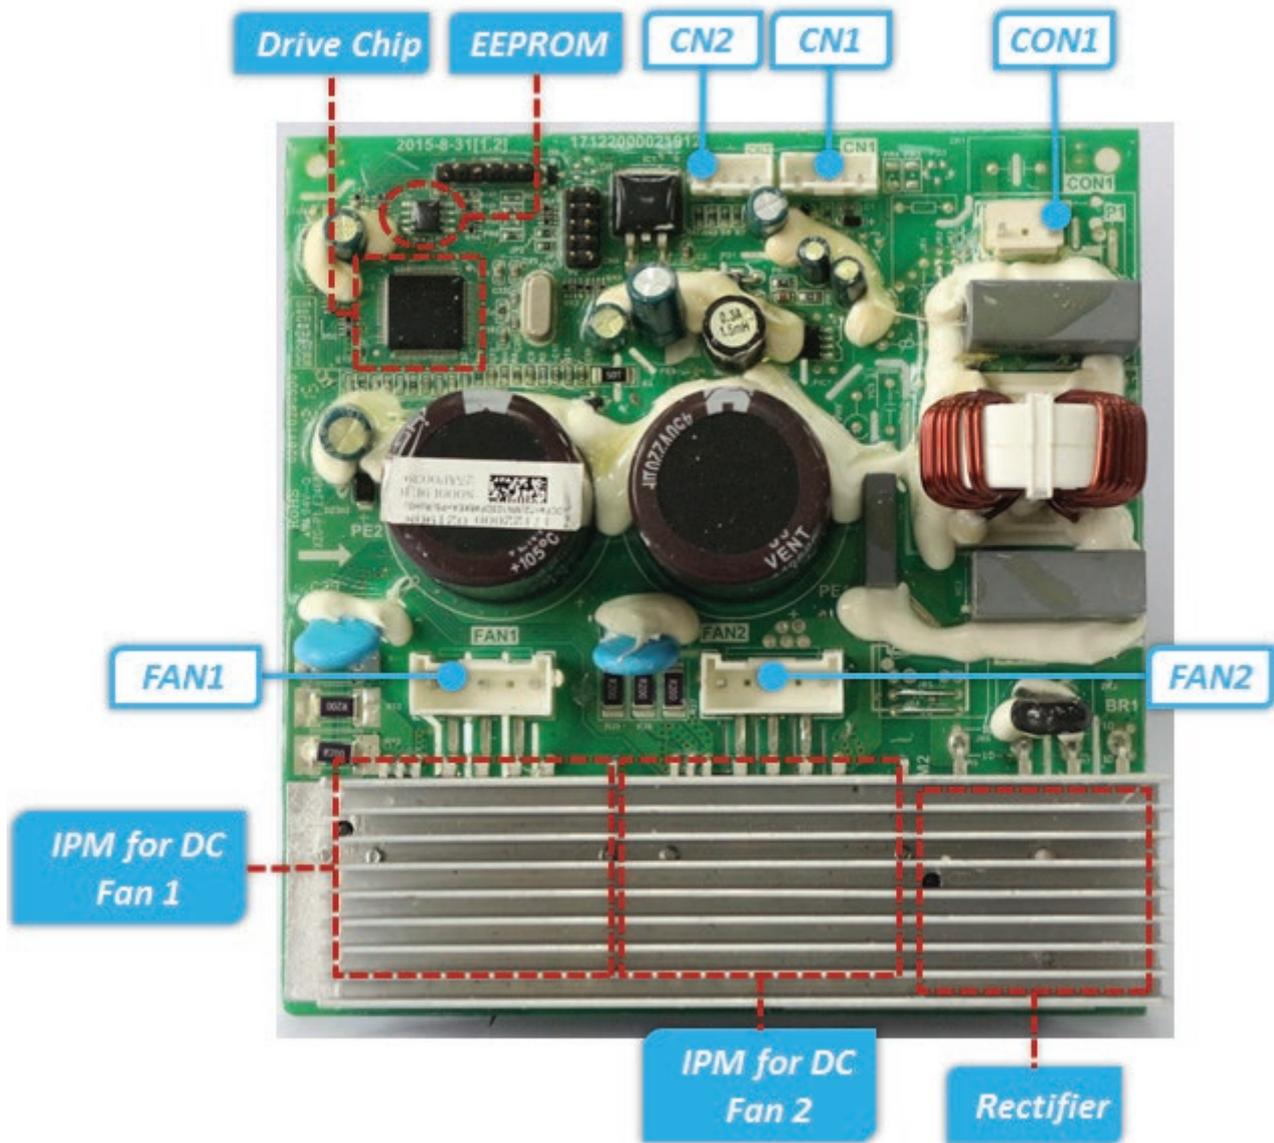

Port	Description	Parameter
CN1, 3	Power input of the PCB	230V/AC
CN2, 4	Power output for IPM board	230V/AC
CN22	Port for communication with indoor unit	
CN35	Port for test board	5V/DC
CN6	Port for communication with IPM board	5V/DC
CN9	Power output for condenser (T3), ambient (T4) temperature sensors	5V/DC
CN8	Power output for discharge (Td) temperature sensor	5V/DC
CN15, 23, 26, 30, 33	Power output for EEV of IDU A-E	12V/DC
CN10	Port for Hi-pressure and low-pressure switches	
CN17	Power output for 4-way valve	230V/AC
CN24	Power output for compressor heater	230V/AC
CN19	Power output for chassis heater	230V/AC
CN13, 16, 21, 29, 37	Power and communication with IDU A-D	230V/AC

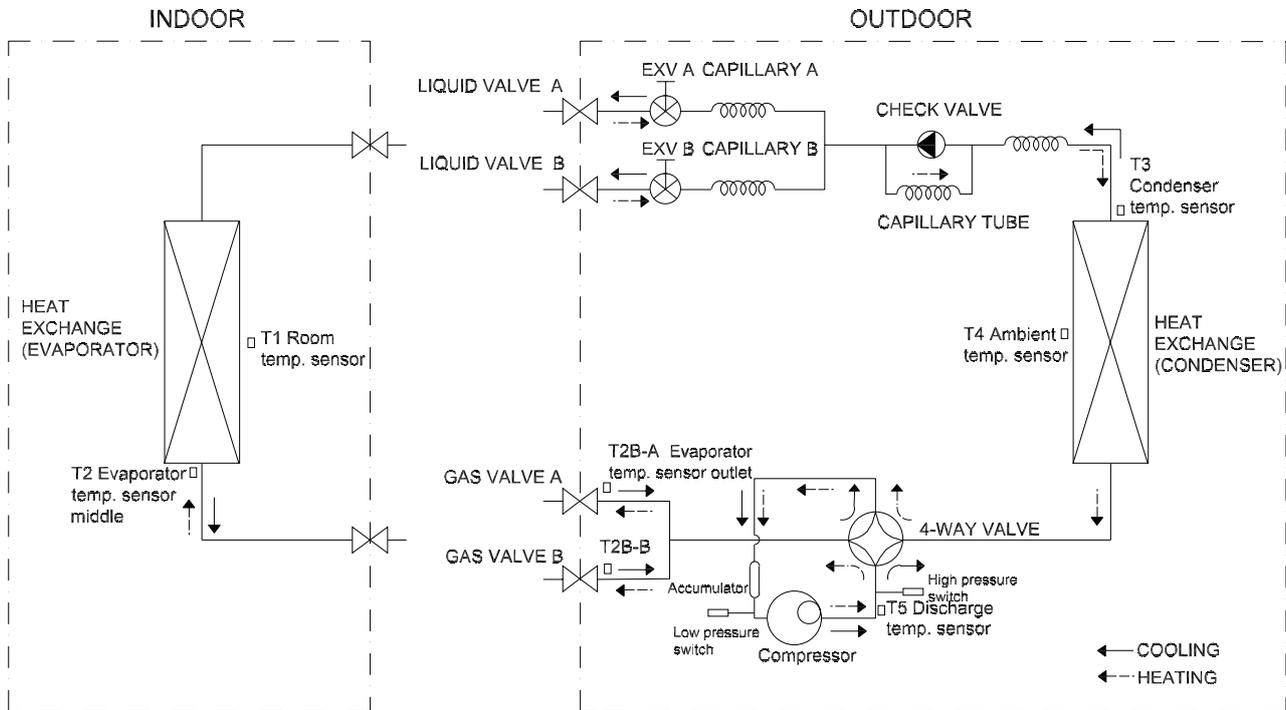

Port	Description	Parameter
CN11	Output for DC fan drive board	230V/AC
CN9	Communication port with main board	5V/DC
CN1	P-in	320V/DC
CN2	N-in (GND)	
CN3, CN6	Ports for reactor	
UVW	Output for compressor	

DC fan drive board of DRA5U48M1A

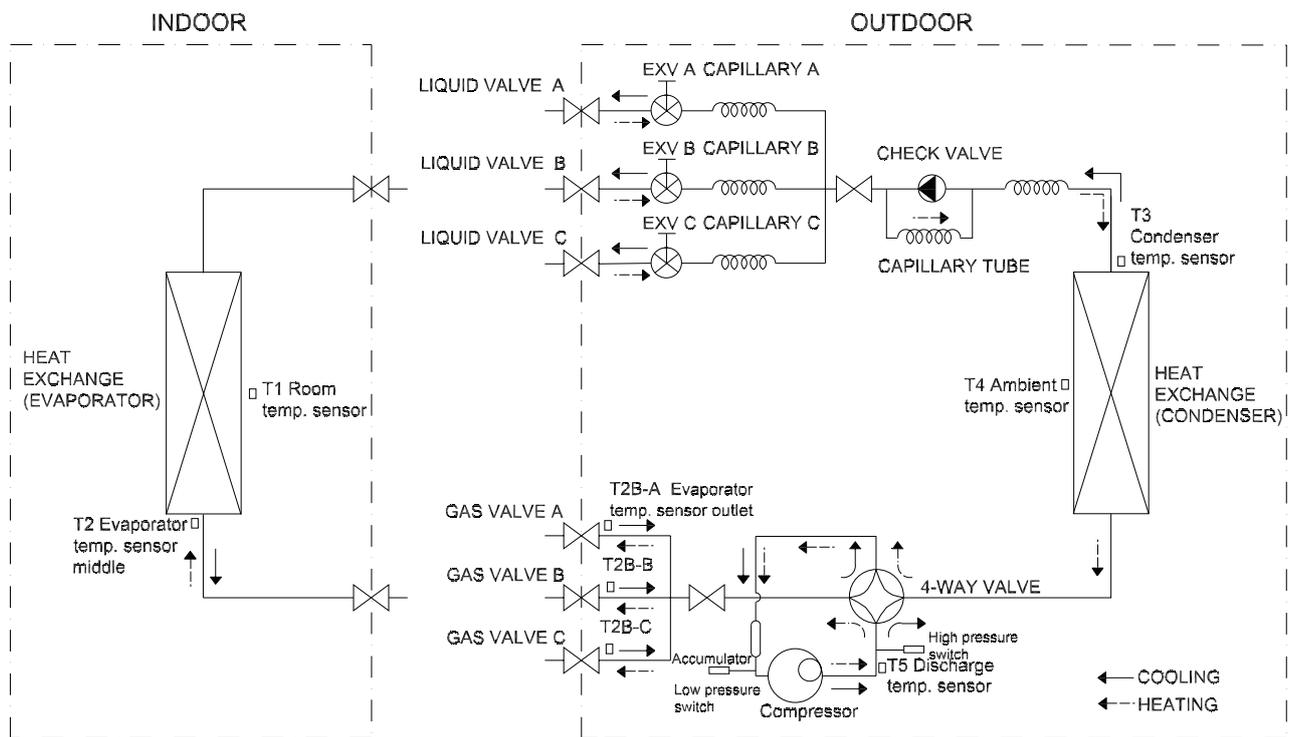

Port	Description	Parameter	Remark
CON1	Power input for the PCB	230V/AC	
CN1	Communication with main PCB	230V/AC	
CN2	Test port	5V/DC	For debugging board
CN23	UVW output for DC fan motor 1		
CN23	UVW output for DC fan motor 2

13. Noise Criterion Curves

13.1 Indoor Unit

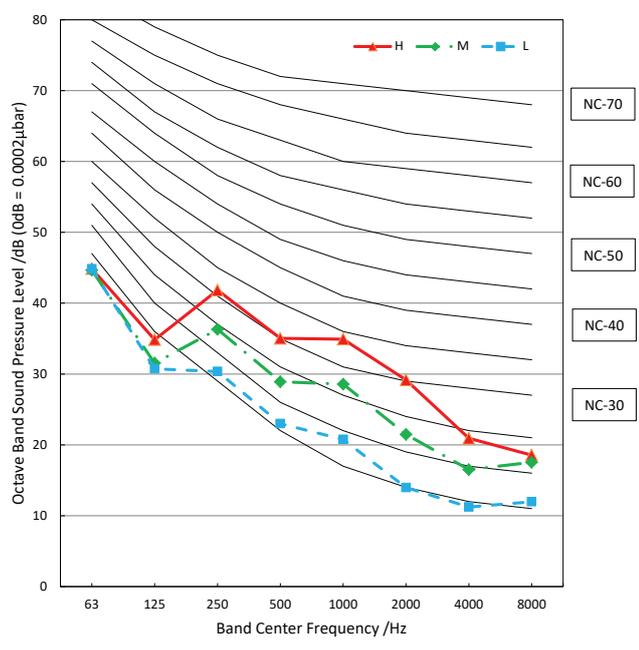

Slim Ducted type

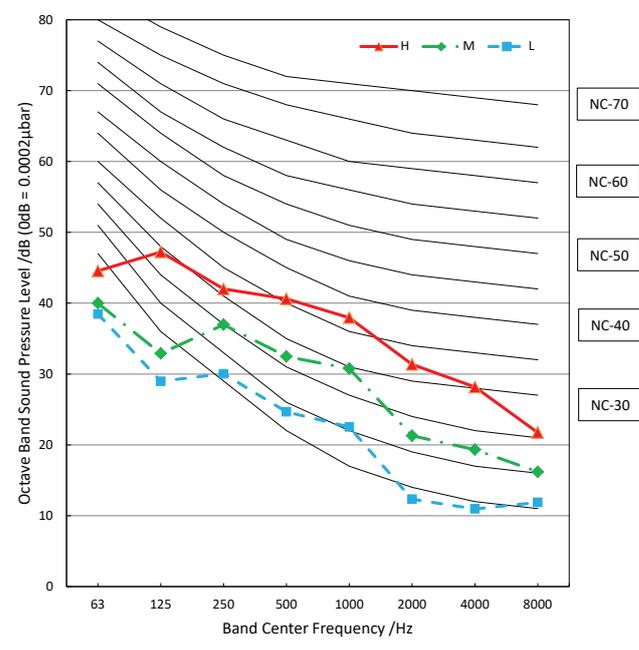

Notes:

- Sound measured at 1.5m away from the center of the unit.
- Data is valid at free field condition
- Data is valid at nominal operation condition
- Reference acoustic pressure $OdB=20 \mu Pa$
- Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of particular room in which the equipment is installed.
- The operating conditions are assumed to be standard.

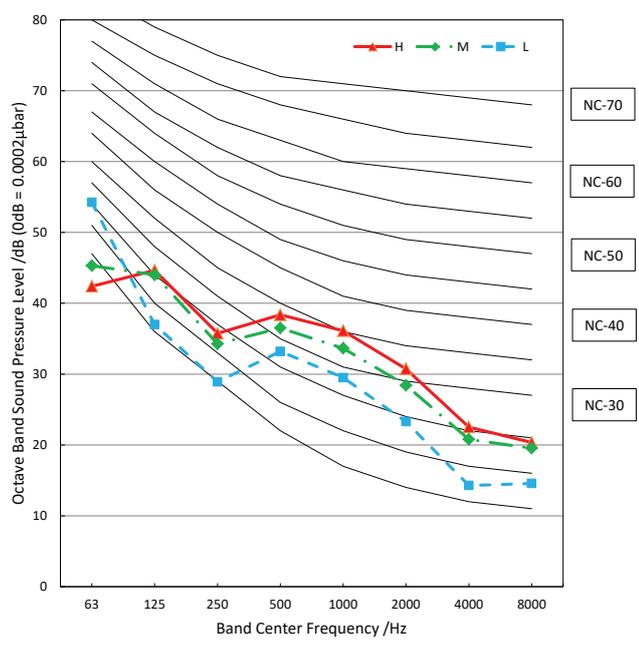

DRAD09F1A

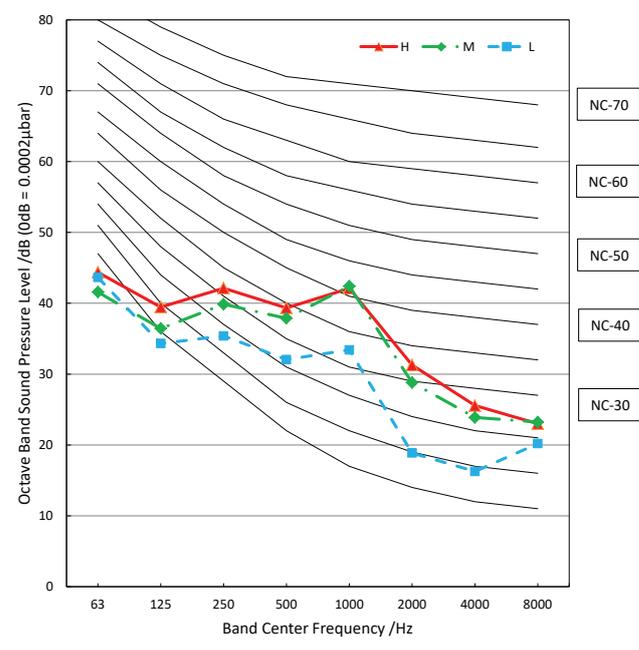

DRAD12F1A

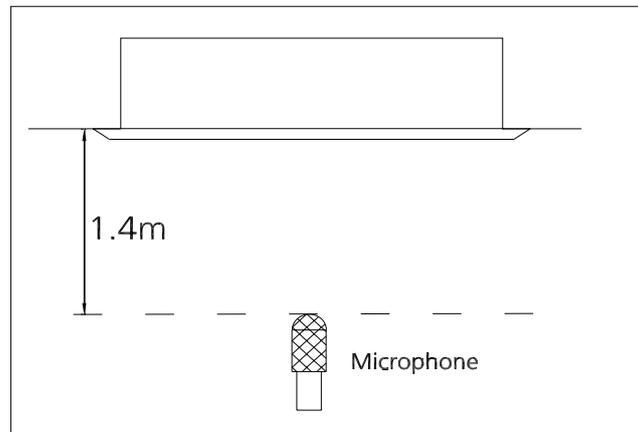

DRAD18F1A

DRAD24F1A

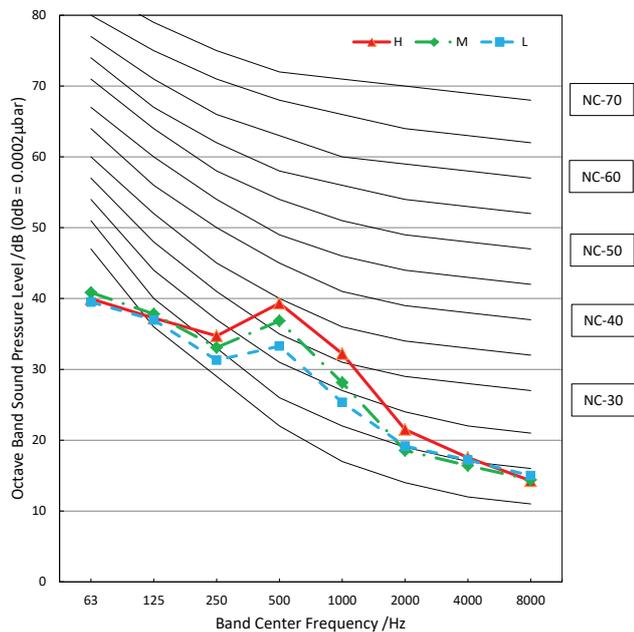

Cassette type

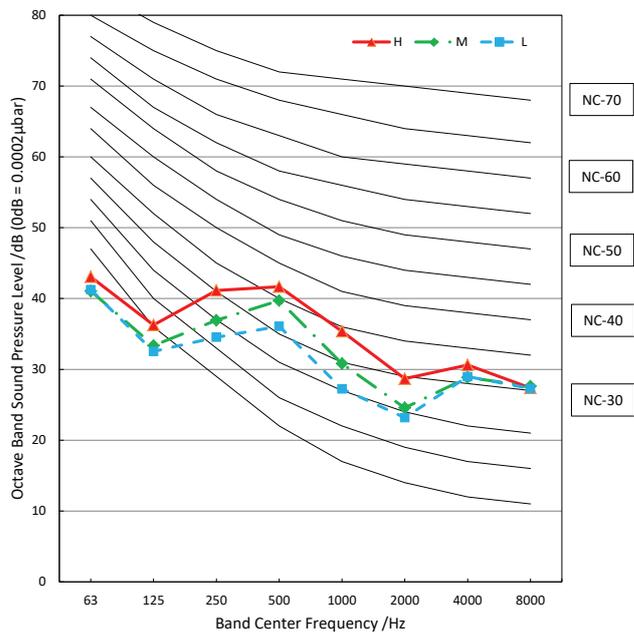

Notes:

- Sound measured at 1.4m away from the noisiest location of the unit.
- Data is valid at free field condition
- Data is valid at nominal operation condition
- Reference acoustic pressure $OdB=20 \mu Pa$
- Sound level will vary depending on a range of factors such as the construction -(acoustic absorption coefficient) of particular room in which the equipment is installed.
- The operating conditions are assumed to be standard.

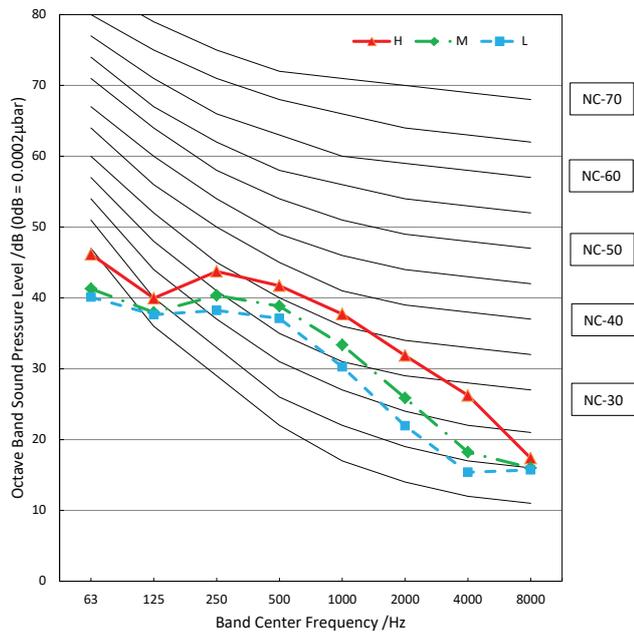

DRAC09F1A

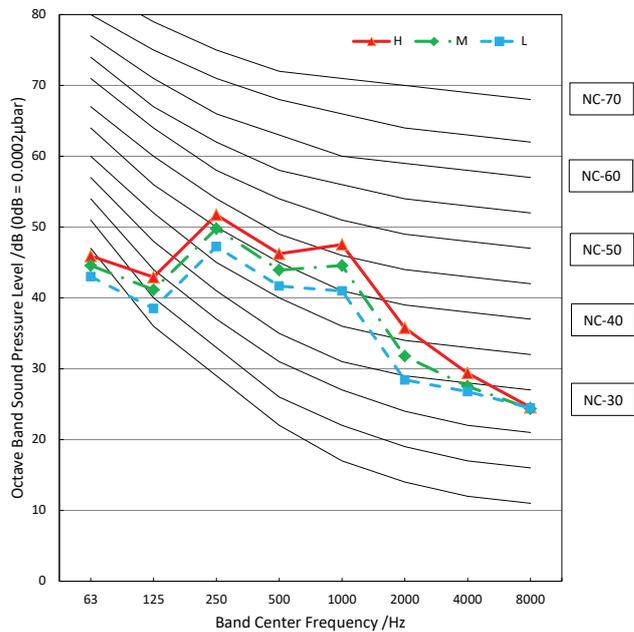

DRAC12F1A

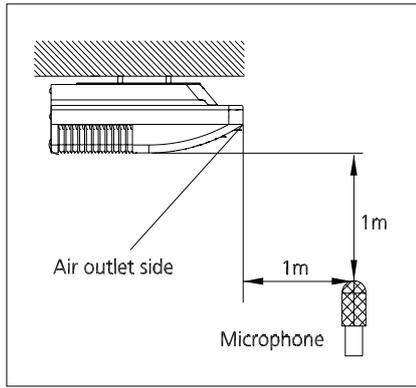

DRAC18F1A

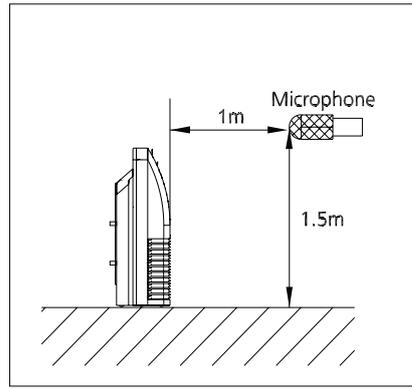

DRAC24F1A

Floor Ceiling type

Ceiling

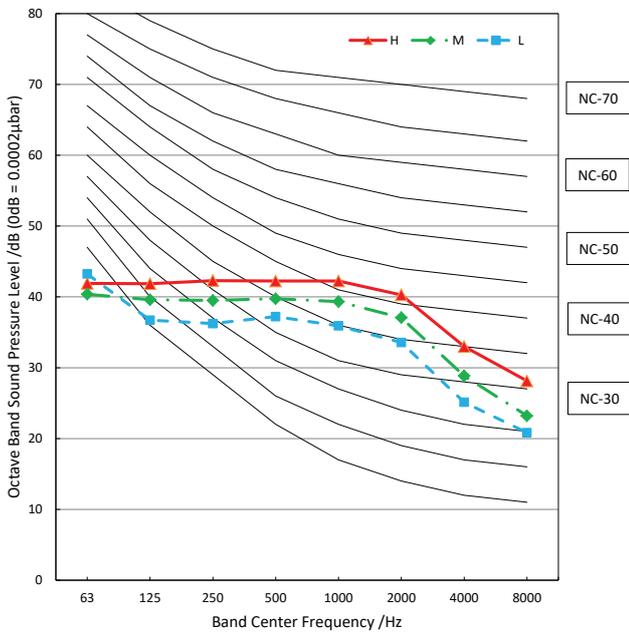

Floor

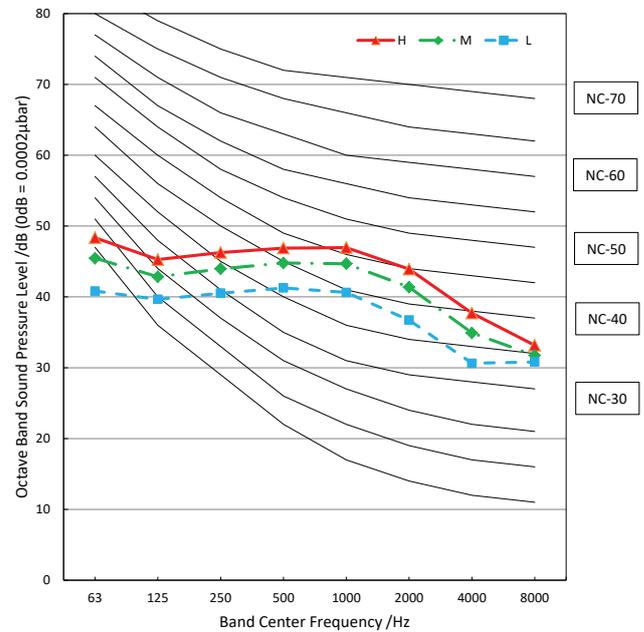

Notes:

- Sound measured at 1.5m away from the center of the unit.
- Data is valid at free field condition
- Data is valid at nominal operation condition
- Reference acoustic pressure $OdB = 20 \mu Pa$
- Sound level will vary depending on a range of factors such as the construction - (acoustic absorption coefficient) of particular room in which the equipment is installed.
- The operating conditions are assumed to be standard.

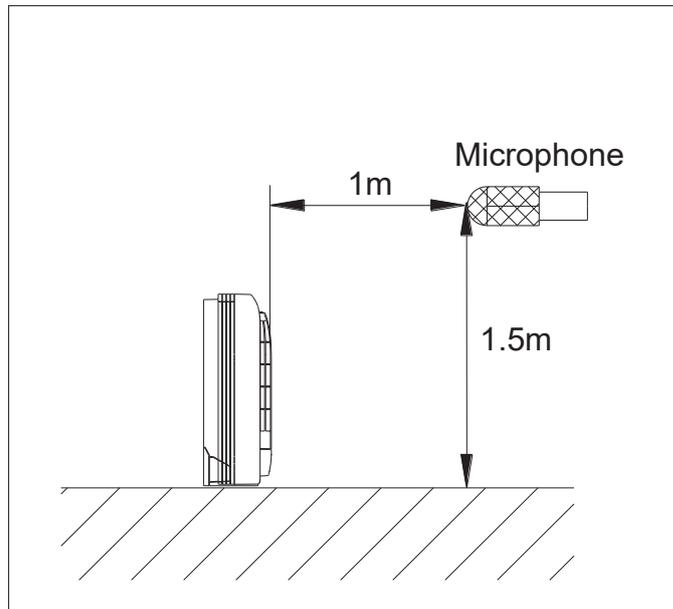

DRAF18F1A

DRAF24F1A

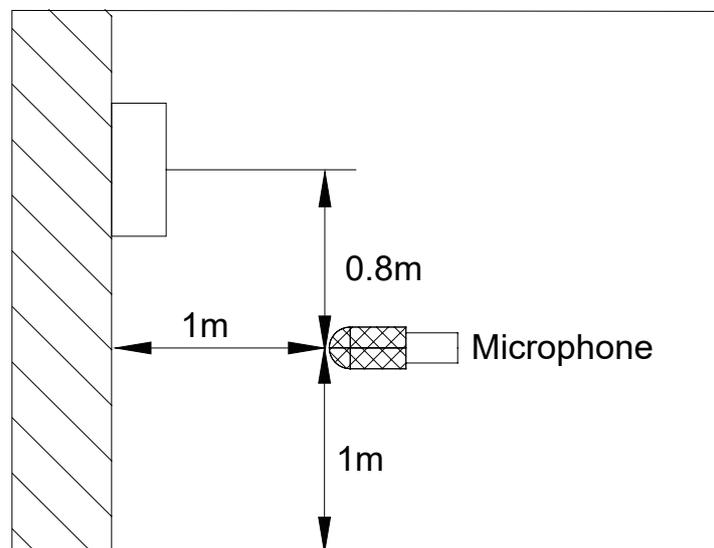

Floor mounted console type

Model	Noise level dB(A)		
	H	M	L
DRAS12F1A	44	42	38

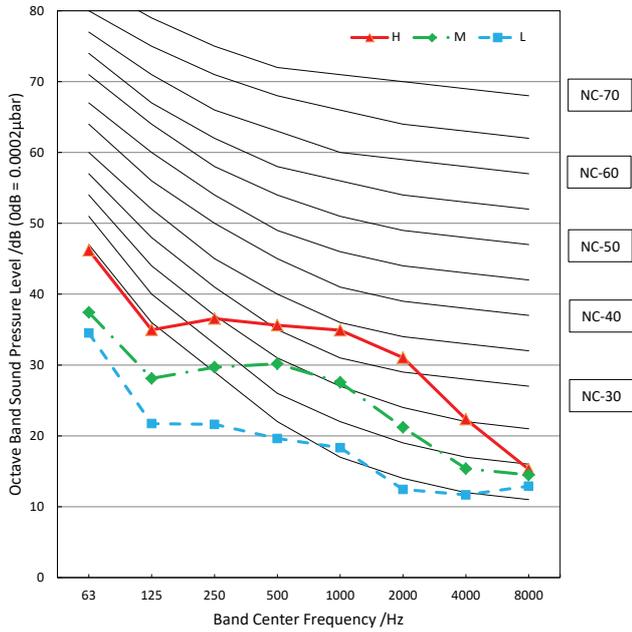

Wall mounted type

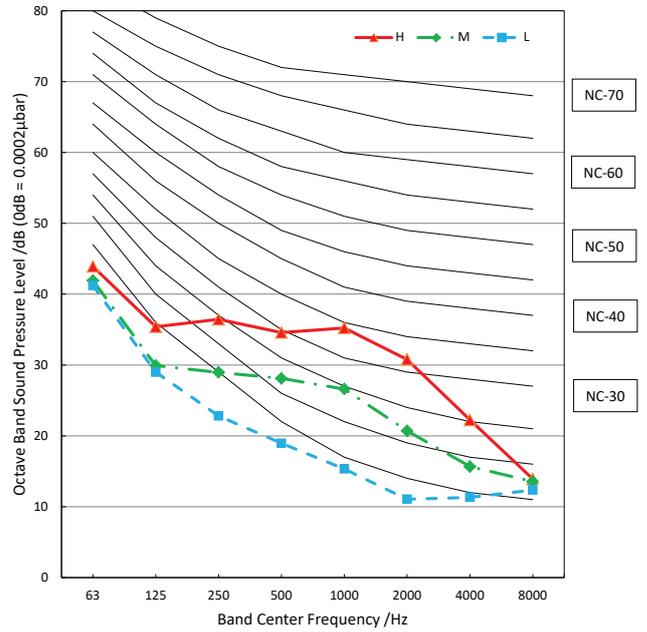

Notes:

- Sound measured at 1.0m away from the center of the unit.
- Data is valid at free field condition
- Data is valid at nominal operation condition
- Reference acoustic pressure $OdB = 20 \mu Pa$
- Sound level will vary depending on a range of factors such as the construction -(acoustic absorption coefficient) of particular room in which the equipment is installed.
- The operating conditions are assumed to be standard.

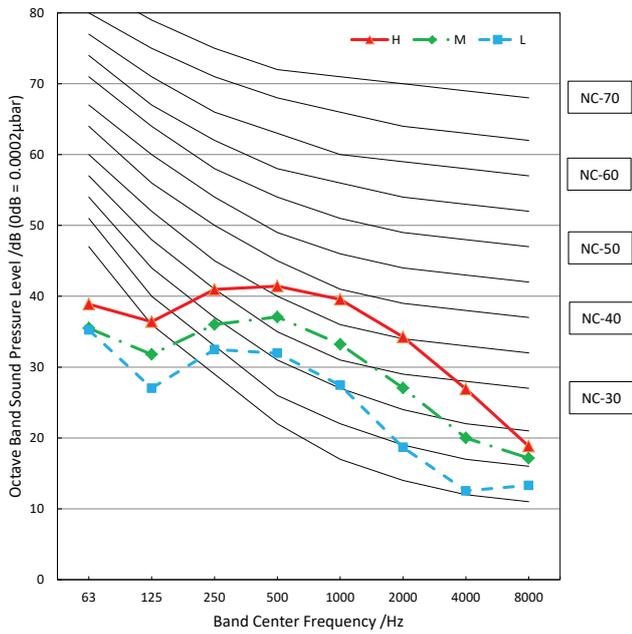

DRAW09F1A

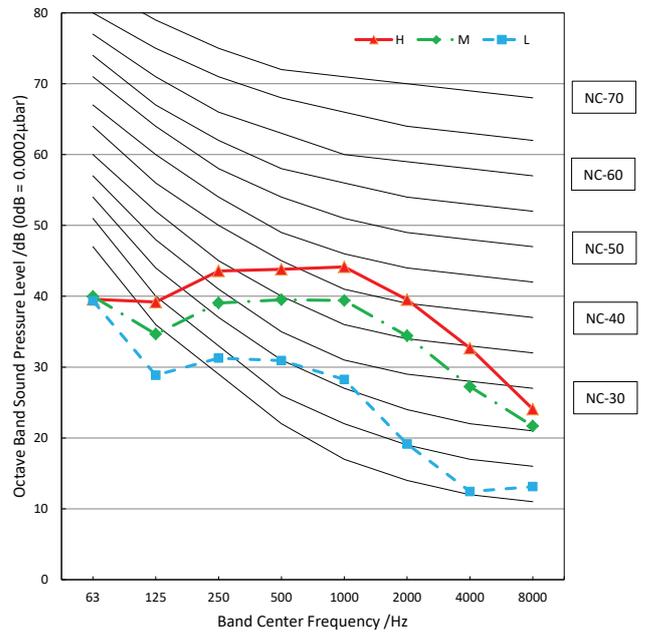

DRAW12F1A

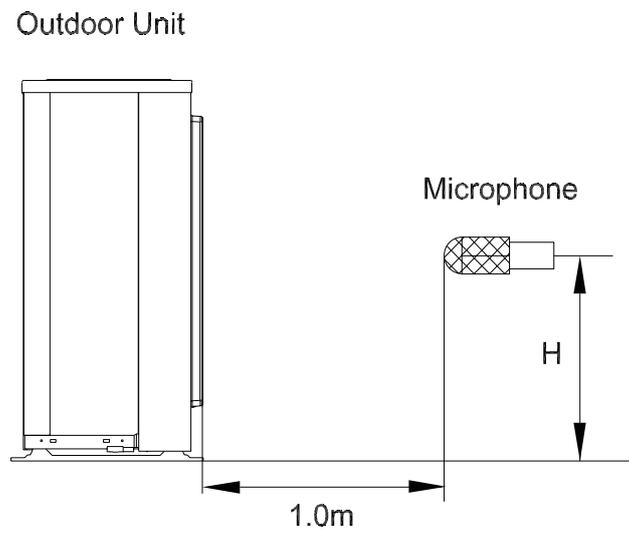

DRAW18F1A

DRAW24F1A

13.2 Outdoor Unit

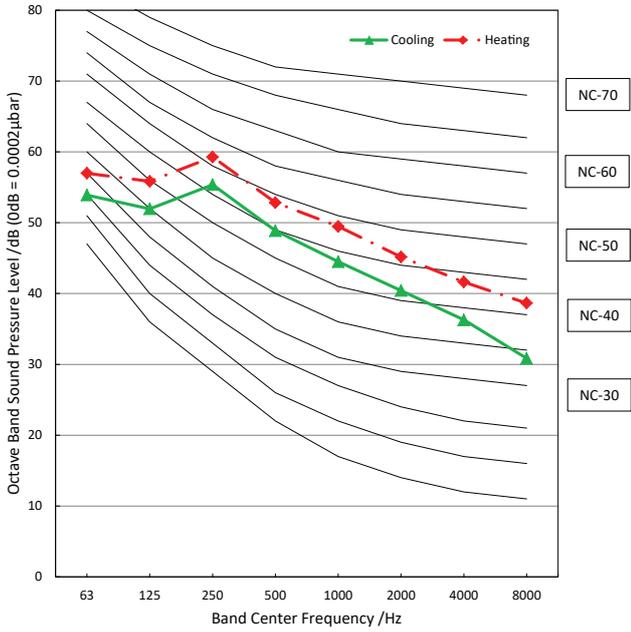

Note: $H = 0.5 \times$ height of outdoor unit

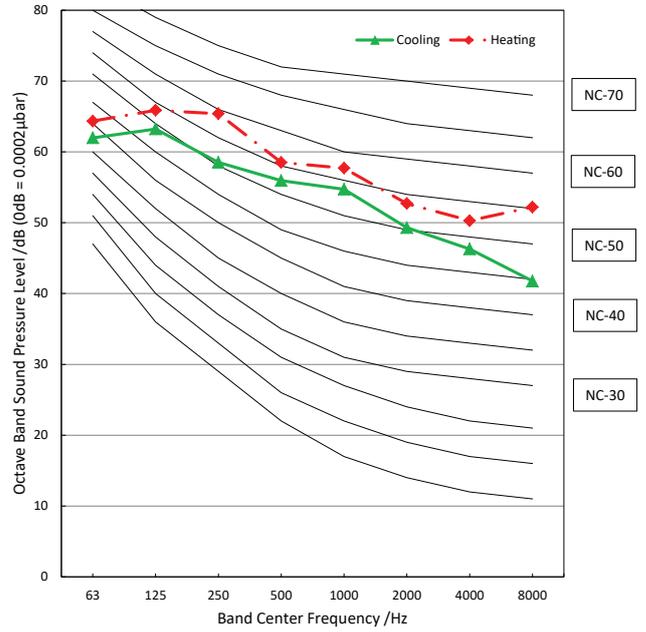

Notes:

- Sound measured at 1.0m away from the center of the unit.
- Data is valid at free field condition
- Data is valid at nominal operation condition
- Reference acoustic pressure $OdB=20 \mu Pa$
- Sound level will vary depending on arrangement of factors such as the construction (acoustic absorption coefficient) of particular room in which the equipment is installed.
- The operating conditions are assumed to be standard.

1. Display Function

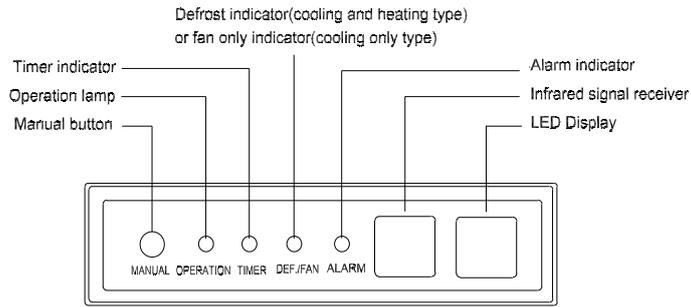

Wall mounted type:

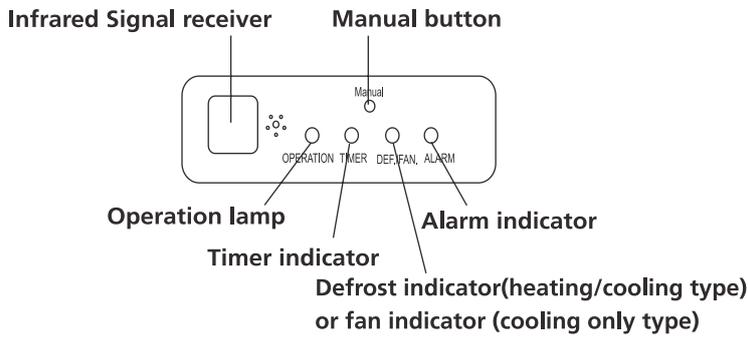

Display		Function
		Fresh(available on select units only)
		Defrost
		When the unit is on
		When TIMER is on
ECO		ECO function (available on select units only)
°C		Lights up in different colour according to the operation mode(some units) : Under COOL and DRY mode, it displays as cool colour.Under HEAT mode, it displays as warm colour.
		when Wireless Control feature is activated(some units)
	Temperature value	Temperature
	(3s)	Activation of Timer ON, Fresh, Swing, Turbo, or Silent
	(3s)	Cancellation of Timer OFF, Fresh, Swing, Turbo, or Silent
		Defrost
		Warming in heating mode
		Self-clean (available on select units only)
		Heating in room temperature under 8°C

Note: Please select the display function according to your purchase product.

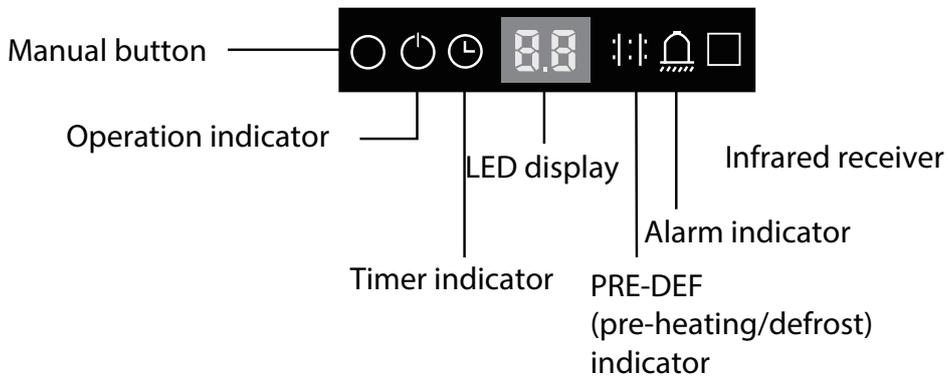

Slim Ducted type:

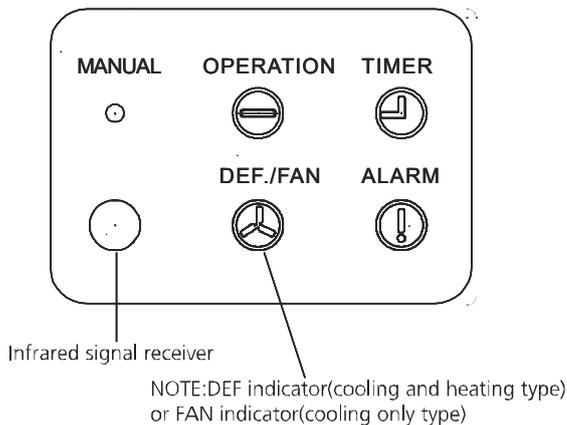

Cassette type 9-18K:

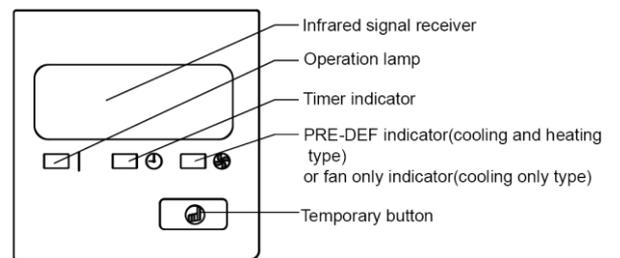

Cassette Type 24K:

Floor Ceiling Type

Floor Mounted Console Type

2. Operation Modes and Functions

2.1 Abbreviation

Unit element abbreviations

Abbreviation	Element
T1	Indoor room temperature
T2	Coil temperature of evaporator middle
T2B	Coil temperature of evaporator outlet(It is located in outdoor unit)
T3	Coil temperature of condenser
T4	Outdoor ambient temperature
T5	Compressor discharge temperature
TS	Setting temperature

2.2 Safety Features

Open Circuit/Disconnection Sensor Protection

Automatic shutoff based on fan speed

For Slim Duct type,

If a fault occurs on the air volume regulator or the regulator enters protection mode, it sends the error message CF and an instruction to reduce fan speed to the master. The message and the instruction can be inquired with the remote controller or the wired controller. (Fault and protection information are displayed for one minute). After a fault occurs, the master unit shows the error code E3 and the fault count for one minute.

If the fault occurs three times, then the fan is unable to resolve the problem independently. External shutdown by a remote controller, wired controller, or central controller must be used to clear the fan fault and fault count. The fan runs normally for 5 minutes while clearing fault count.

For other types,

If the indoor fan speed registers below 300RPM for an extended period of time, it shuts off and restarts in 30 seconds. If this happens 3 times, the unit ceases operation and the corresponding error code is displayed on the indoor unit.

If outdoor fan speed registers below 100RPM or higher than 2400RPM for an extended period of time, the unit ceases operation and the corresponding error code is displayed on the indoor unit and outdoor unit.

Indoor fan delayed operation

- When the unit starts, the louver is automatically

activated and the indoor fan will operate after a period of 7 seconds.

- If the unit is in heating mode, the indoor fan is regulated by the anti-cold wind function.

Zero crossing detection error protection(For Wall mounted type)

If AC can not detect zero crossing signal for 4 minutes or the zero crossing signal time interval is not correct, the unit will stop and the LED will display the failure. The correct zero crossing signal time interval should be between 6-13ms.

Compressor three-minute delay at restart

Compressor functions are delayed for up to one minute upon the first startup of the unit, and are delayed for up to three minutes upon subsequent unit restarts.

Inverter module protection

The inverter module has an automatic shutoff mechanism based on the unit's current, voltage, and temperature. If automatic shutoff is initiated, the corresponding error code is displayed on the indoor unit and the unit ceases operation.

Automatic shutoff based on discharge temperature

If the compressor discharge temperature exceeds a certain level for a period of time, the compressor ceases operation.

Oil return

Running rules:

1. If the compressor frequency keeps lower than setting frequency for setting time, the AC will rise the frequency to setting frequency for setting time and then resume to former frequency.
2. The EXV will keep 300p while the indoor units will keep the current running mode.

If the outdoor ambient is higher than setting frequency during the oil return, the AC quit oil return.

2.3 Fan Mode

When fan mode is activated:

- The outdoor fan and compressor cease operation.
- Temperature control is disabled and no temperature setting is displayed.
- The indoor fan speed can be set to high, medium, low, or auto.
- The louver operations are identical to those in cooling mode.

2.4 Cooling Mode

2.4.1 Indoor Fan Control

- In cooling mode, the indoor fan operates continuously. The fan speed can be set to high, medium, low or auto.
- The auto fan acts according to the value of T1-Ts.

2.4.2 Outdoor Fan Control

- The outdoor fan is controlled by T4.

2.4.3 Evaporator Temperature Protection

When $T_2 < 4\text{ }^\circ\text{C}$ for 250 seconds or $T_2 < 0\text{ }^\circ\text{C}$, the compressor and outdoor fan cease operation and resume to normal when $T_2 > 8\text{ }^\circ\text{C}$ and the time of protection is no less than 3 minutes.

2.4.4 Condenser Temperature Protection

When condenser temperature is more than setting value, the compressor ceases operations.

2.5 Heating Mode(Heat pump models)

2.5.1 Indoor Fan Control:

- When the compressor is on, the fan speed can be set to high, medium, low, or auto. And the anti-cold wind function has the priority.
- The auto fan acts according to the value of T1-Ts.

2.5.2 Outdoor Fan Control:

- The outdoor fan is controlled by T4.

2.5.3 Defrosting mode

- The unit enters defrosting mode according to the value of temperature of T3 and the value range of temperature change of T3 and also the compressor running time.
- If any one of the following items is satisfied, the defrosting will finish and the machine will turn to normal heating mode.
 - T3 rises to be higher than TCDE1 $^\circ\text{C}$.
 - T3 keeps to be higher than TCDE2 $^\circ\text{C}$ for 80

seconds.

- The machine has run for 10 minutes in defrosting mode.

2.5.4 Evaporator Temperature Protection

When the evaporator temperature exceeds a preset protection value, the compressor and outdoor fan cease operations, the outdoor fan motor ceases operation 30 seconds later.

2.5.5 Prevent Over-Heating

In heating mode, when the indoor unit has no capacity requirement due to indoor room temperature increased, the Indoor fan will run in super breeze. (Anti-cold wind function has the priority)

2.6 Auto Mode

- This mode can be selected with the remote controller and the temperature setting can be adjusted between 17 $^\circ\text{C}$ ~30 $^\circ\text{C}$
- In auto mode, the machine selects cooling, heating, or fan-only mode on the basis of ΔT ($\Delta T = T_1 - T_s$).

ΔT	Running mode
$\Delta T > 2\text{ }^\circ\text{C}$	Cooling
$-2\text{ }^\circ\text{C} \leq \Delta T \leq 2\text{ }^\circ\text{C}$	Fan-only
$\Delta T < -2\text{ }^\circ\text{C}$	Heating*

Heating*: In auto mode, cooling only models run the fan.

- Indoor fans run at the auto fan speed of the relevant mode.
- The louver operates the same as in relevant mode.
- If the machine switches mode between heating and cooling, the compressor pauses for a certain period of time intermittently and then selects a mode based on T1-Ts.
- If the setting temperature is modified, the machine selects a new running function.

2.7 Drying Mode

- Indoor fan speed is fixed at low and cannot be changed.
- Low indoor room temperature protection
- In drying mode, if room temperature is lower than 10 $^\circ\text{C}$, the indoor fan will stop and not resume until room temperature exceeds 12 $^\circ\text{C}$.
- All protections are activated and operate the same as they do in cooling mode.
- The louver operates the same as in cooling mode.

2.8 Timer Function

- The timing range is 24 hours.
- **Timer On.** The machine turns on automatically at the preset time.
- **Timer Off.** The machine turns off automatically at the preset time.
- **Timer On/Off.** The machine turns on automatically at the preset On Time, and then turns off automatically at the preset Off Time.
- **Timer Off/On.** The machine turns on automatically at the preset Off Time and then turns off automatically at the preset On Time.
- The timer does not change the unit operation mode. If the unit is off now, it does not start up immediately after the "timer off" function is set. When the setting time is reached, the timer LED switches off and the unit running mode remains unchanged.
- The timer uses relative time, not clock time

2.9 Sleep Function

- The sleep function is available in cooling, heating, or auto mode.
- The operational process for sleep mode is as follows:
- When cooling, the temperature rises 1 °C (to not higher than 30 °C) every hour. After 2 hours, the temperature stops rising and the indoor fan is fixed to auto speed.
- When heating, the temperature decreases 1 °C (to not lower than 17 °C) every hour. After 2 hours, the temperature stops decreasing and the indoor fan is fixed at auto speed. Anti-cold wind function takes priority.

2.10 Forced operation function

- **Forced cooling mode:**

The compressor and outdoor fan continue to run and the indoor fan runs at rated speed. After running for 30 minutes, the AC will switch to auto mode with a preset temperature of 24°C

- **Forced auto mode:**

Forced auto mode operates the same as normal auto mode with a preset temperature of 24°C.

- When any one of indoor units runs in forced cooling, it is designated as the master forced cooling unit. Other indoor units act as the slave forced cooling units. The slave forced cooling units cannot exit forced cooling mode until the master forced cooling unit does so. They then switch to

cooling mode in low fan with the temperature set at 24°C.

- **Forced defrosting mode:**
 - In the forced cooling mode (single heat engine for forced auto mode), press and hold the forced key for 5 seconds after release, immediately enter the forced frosting mode.
 - When any one of indoor units runs in forced defrosting mode, the indoor fan is off and other indoor fans are off. The outdoor unit operates forced defrosting.

2.11 Auto-Restart

- The indoor unit has an auto-restart module that allows the unit to restart automatically. The module automatically stores the current settings (not including sleep mode) and, in the case of a sudden power failure, will restore those settings automatically within 3 minutes after power returns.
- If the unit was in forced cooling mode, it will run in this mode for 30 minutes and turn to auto mode with temperature set to 24 °C.
- If there is a power failure while the unit is running, the compressor starts 3 minutes after the unit restarts. If the unit was already off before the power failure, the compressor starts 1 minute after the unit restarts.

2.12 Follow Me (Optional)

- If you press "Follow Me" on the remote, the indoor unit will beep. This indicates the follow me function is active.
- Once active, the remote control will send a signal every 3 minutes, with no beeps. The unit automatically sets the temperature according to the measurements from the remote control.
- The unit will only change modes if the information from the remote control makes it necessary, not from the unit's temperature setting.

2.13 Drain Pump Control (Optional)

- Use the water-level switch to control drain pump.
- The system checks the water level every 5 seconds.
 - When the A/C operates in cooling (including auto cooling) or forced cooling mode, the pump begins running immediately and continuously until cooling stops.
 - If the water level increases up to the control point, the LED displays an alarm code and the drain pump opens and continually monitors the water level. If the water level falls and LED alarm code is no longer

displayed (drain pump close delay is 1 minute), the unit goes back into its last mode. Otherwise, the entire system (including the pump) stops and the LED displays an alarm again after 3 minutes.

2.14 Mode Conflict

- The indoor units can not work cooling mode and heating at same time.
- Heating mode has a priority.

(1) Definition

	Cooling mode	Heating Mode	Fan	Off
Cooling mode	No	Yes	No	No
Heating Mode	Yes	No	Yes	No
Fan	No	Yes	No	No
Off	No	No	No	No

No: No mode conflict;

Yes: Mode conflict

(2) Unit action

- In case of one Indoor unit working in cooling mode or fan mode, and another indoor unit is set to heating mode, the indoor unit working in cooling mode or fan mode will change to off. The outdoor unit will change to heating mode after compressor stop 3 minutes. .
- In case of one Indoor unit working in heating mode, and another indoor unit is set to cooling mode or fan mode, the indoor unit setting to cooling mode or fan mode will change to stand by. The outdoor unit will continue working in heating mode.
- If heating mode stops (not including the indoor unit in heating mode reaching the set temperature), 3 minutes after the outdoor unit restarts and works in cooling mode or fan-only mode.

3. Remote Controller Functions

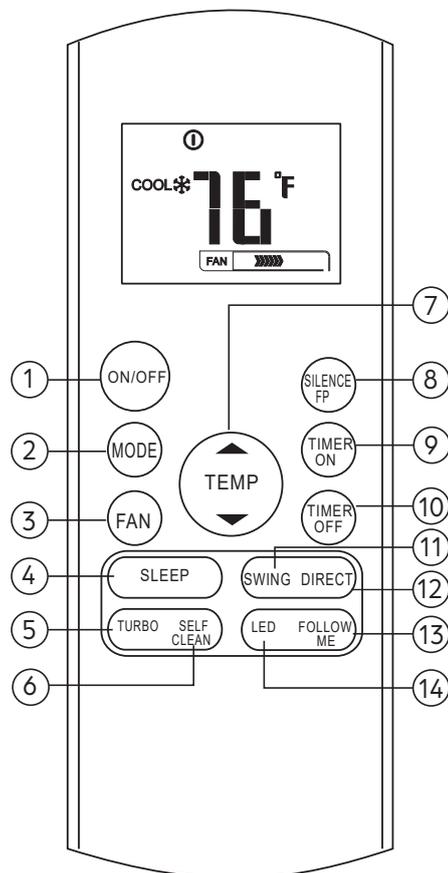

3.1 Infrared Wireless Remote Controller

- 3.1.1 Standard for wall mounted, cassette & floor ceiling type

Remote Controller Specifications

Model	RG05F2/BGEU1
Rated Voltage	3.0V (Dry batteries R03/LR03×2)
Reaching Distance	8m
Environment Temperature Range	-5 °C ~60 °C (23 °F ~140 °F)

Buttons and Functions

1. **ON/OFF Button:** For turning on or turning off the air conditioner.

2. **MODE Button:** Once pressing, running mode will be selected in the following sequence:

NOTE: No heating mode for cool only type unit.

3. **FAN SPEED Button:** Fan speed will be selected in following sequence once pressing this button:

4. **SLEEP Button:** Active/Disable sleep function. It can maintain the most comfortable temperature and save energy. This function is available on COOL, HEAT or AUTO mode only .

NOTE: While the unit is running under SLEEP mode, it would be cancelled if press MODE, FAN SPEED or ON/OFF button.

5. **TURBO Button:** Active/Disable Turbo function.

Turbo function enables the unit to reach the preset temperature at cooling or heating operation in the shortest time(if the indoor unit does not support this function, there is no corresponding operation happened when pressing this button.)

6. **SELF CLEAN Button:**

Under SELF CLEAN mode, the air conditioner will automatically clean and dry the evaporator and keep it as fresh for the next operation.

7. **TEMP UP ▲ Button:** Push this button to increase setting temperature or to increase Hour during Clock time setting.

TEMP DOWN ▼ Button : Push this button to decrease setting temperature or to decrease Hour during Clock time setting.

8. **SILENCE/FP Button:**

Press button to turn on and off SILENCE feature. When activated, the compressor will slow and indoor fan will turn to low. Due to slow compressor operation, it may result in insufficient cooling and heating capacity.

Press and hold for 2 seconds to start FP feature.

The FP feature sets the indoor temperature to 46 F. The unit will maintain this temperature and prevent indoor pipes and household items from freezing.

9. **TIMER ON Button:** For time ON setting. Press this button to activate the Auto-on time setting. Each press will increase the time setting in 30 minutes increments, up to 10 hours, then at 1 hour increments up to 24 hours. To cancel the Auto-on time setting, just press the button until the time setting is 0.0.

10. **TIMER OFF Button:** For time OFF setting. Press this button to activate the Auto-off time setting. Each press will increase the time setting in 30 minutes increments, up to 10 hours, then at 1 hour increments up to 24 hours. To cancel the Auto-off time setting, just press the button until the time setting is 0.0.

11. **SWING Button:** Used to stop or start horizontal louver movement or set the desired up/down air flow direction. The louver changes 6 degree in angle for each press. If keep pushing more than 2 seconds, the louver will swing up and down automatically.

12. **DIRECT Button:** Press to change the horizontal louver angle. Each press will adjust the angle by 6 degrees.

13. **FOLLOW ME Button:** This feature uses the temperature at the remote's location, instead of the unit's location, to optimize the temperature around you. Press button to turn on and off feature. When using AUTO, COOL and HEAT modes the unit will run until the temperature at the remote is satisfied.

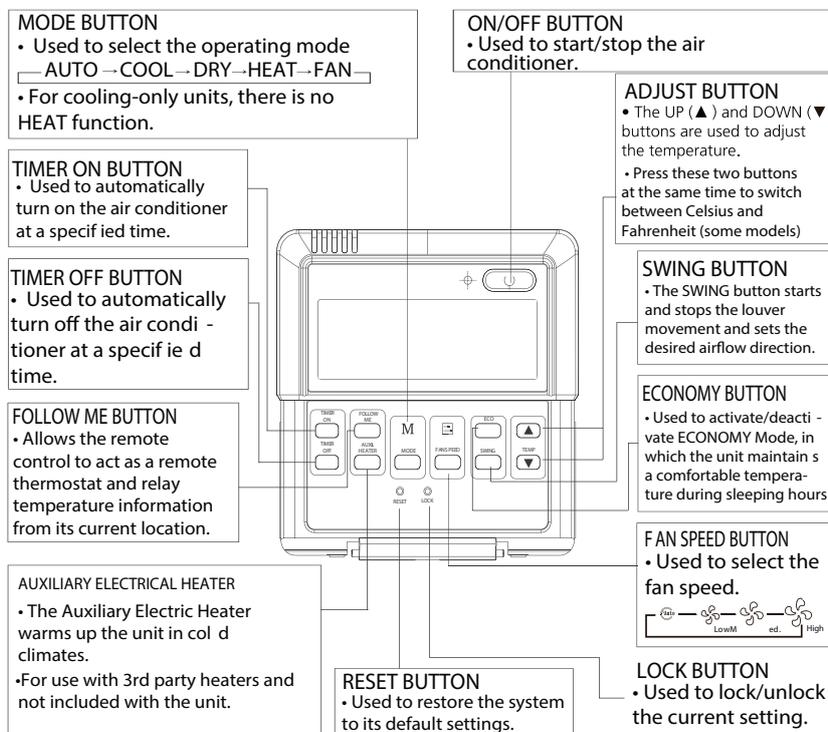

14. **LED Button:** Turns the indoor unit's display screen on and off.

3.2 LCD Wired Remote Controller

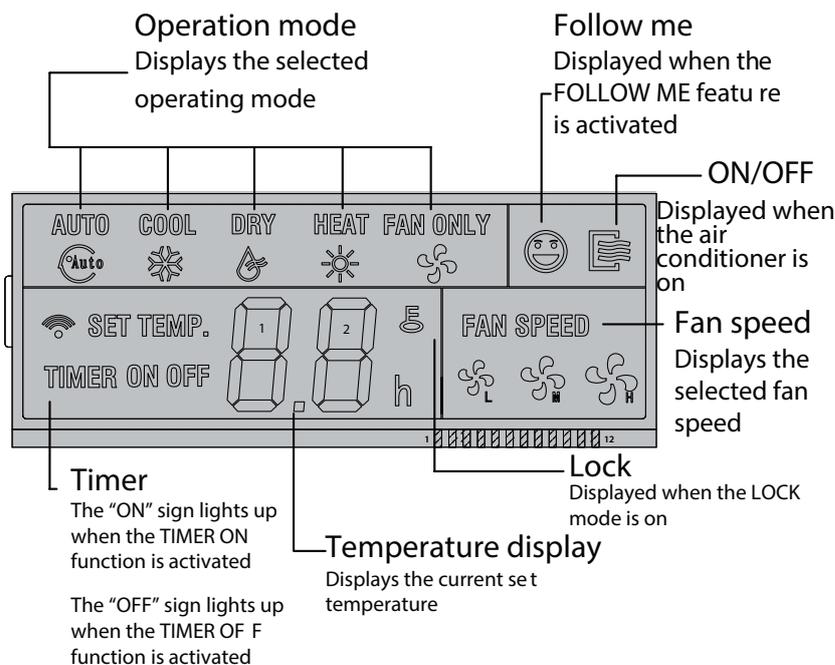

3.2.1 LCD Wired Remote Controller

The wired remote controller is standard for Slim Ducted type units.

i) Buttons and Functions

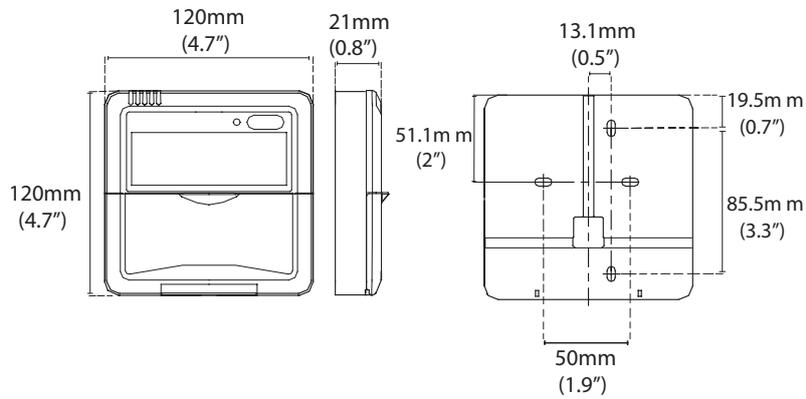

ii) LCD Screen

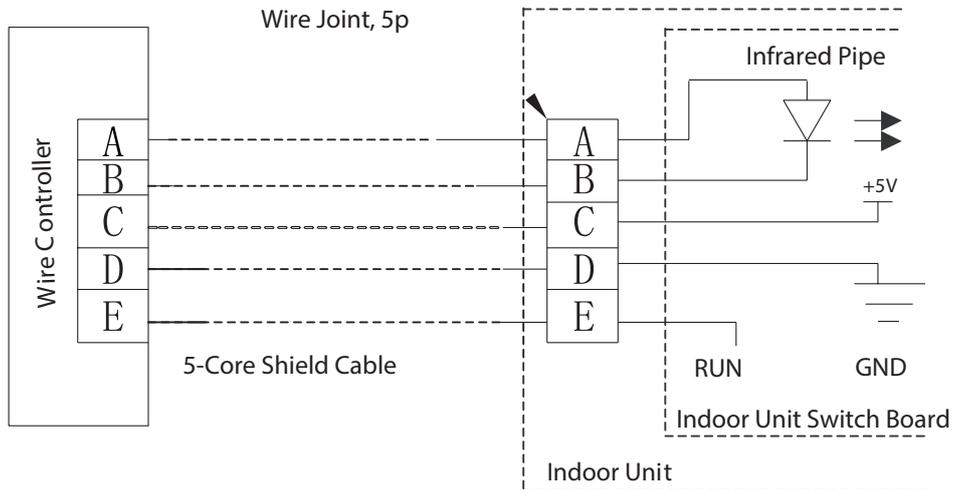

iii) Installation

• Dimensions

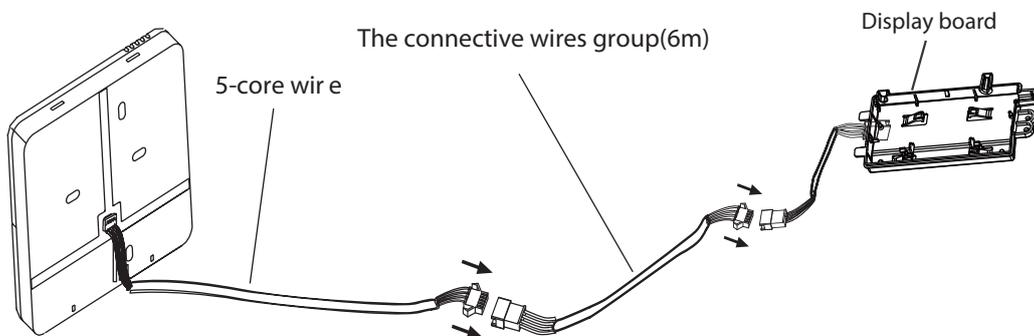

• Wiring diagram

Refer to the following diagram to wire the Wall mounted type remote control to the indoor unit.

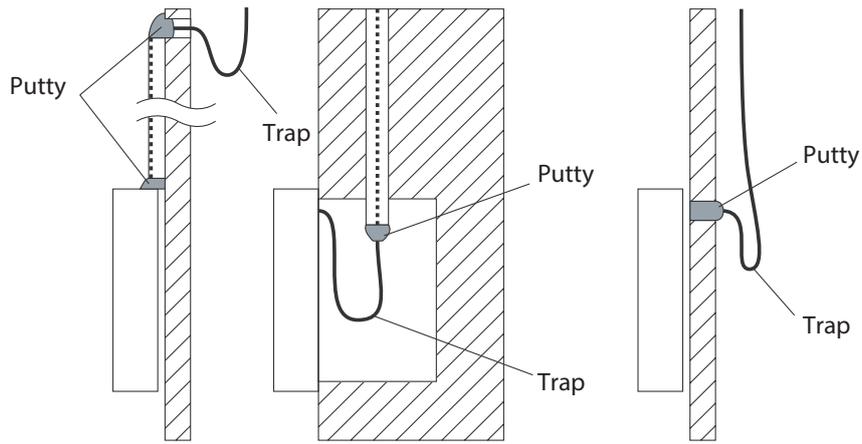

• Installation Diagram

Connect the wire from the display panel of the indoor unit to a connecting cable. Then connect the other side of the connecting cable to the remote control.

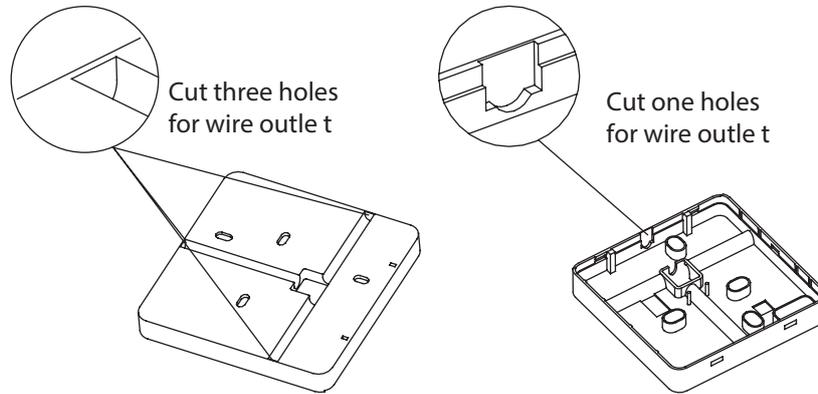

Note: Be sure to reserve a length of the connecting wire for periodic maintenance.

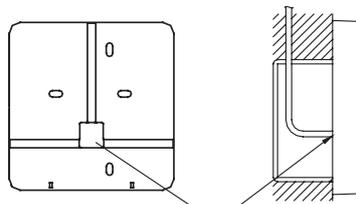

Note: DO NOT allow water to enter the remote control. Use the trap and putty to seal the wires.

- For exposed mounting, cut holes on four of the sides according to the picture below.

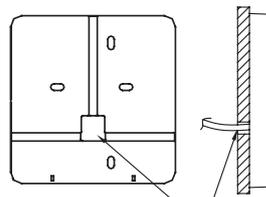

- For shielded wiring, please refer to the picture below.

Embedded switch box wiring

Wiring hole

Wiring through the wall

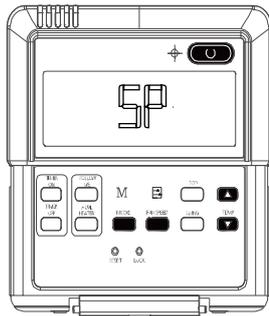

Wall hole and wiring hole
Diameter of wall hole: Φ 2cm

3.3 Using the wire controller to set airflow rate

When the air conditioning unit is off, perform the following steps:

1. Press "MODE" and "FAN" for three seconds.
2. Press " Δ " or " ▽ " to select the SP.
3. Press "MODE" to set the airflow rate in the range of 0~4.

"0": No airflow change

"1" ~ "4": Airflow increase progressively

4. Press "ON/OFF" to finish the airflow setting.

9. Check Procedures

177

1. Safety Caution

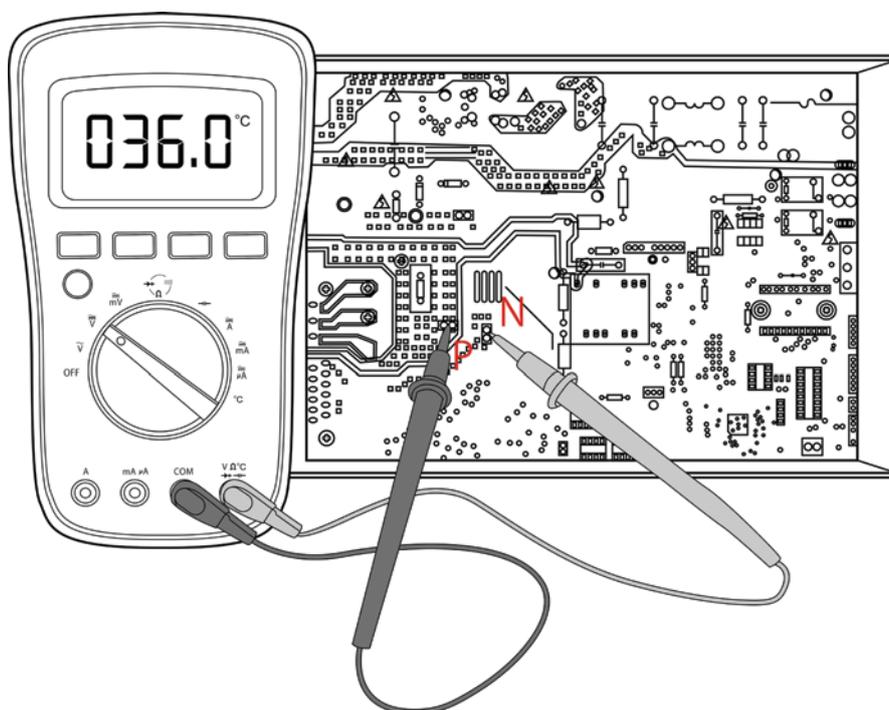

⚠ WARNING

Be sure to turn off all power supplies or disconnect all wires to avoid electric shock. While checking indoor/outdoor PCB, please equip oneself with antistatic gloves or wrist strap to avoid damage to the board.

⚠ WARNING

Electricity remains in capacitors even when the power supply is off. Ensure the capacitors are fully discharged before troubleshooting.

Test the voltage between P and N on back of the main PCB with multimeter. If the voltage is lower than 36V, the capacitors are fully discharged.

Note: This picture is for reference only. Actual appearance may vary.

2. General Troubleshooting

2.1 Error Display (Indoor Unit)

When the indoor unit encounters a recognized error, the operation lamp will flash in a corresponding series, the timer lamp may turn on or begin flashing, and an error code will be displayed. These error codes are described in the following tables:

Operation Lamp	Timer Lamp	Display	Error Information	Solution
--	--	dF	Defrost	--
--	--	cF	Warming in heating mode	--
--	--	SC	Self clean	--
--	--	CL	Clean filter	--
--	--	nF	Replacing filter	--
--	--	FP	Heating in room temperature under 8°C	--
--	--	FC	Forced cooling	--
--	--	AP	AP mode of WIFI connection	--
--	--	CP	Remote switched off	--
1 time	OFF	E0	Indoor unit EEPROM parameter error	TS01-IDU
2 times	OFF	E1	Indoor / outdoor units communication error	TS02-M
3 times	OFF	E2	Zero-crossing signal detection error(for some models)	TS03
4 times	OFF	E3	The indoor fan speed is operating outside of the normal range	TS04-L-IDU
5 times	OFF	E4	Indoor room temperature sensor T1 is in open circuit or has short circuited	TS05-IDU
6 times	OFF	E5	Evaporator coil inlet temperature sensor T2 is in open circuit or has short circuited	TS05-IDU
8 times	OFF	EE	Water-level alarm malfunction (for some models)	TS15
1 times	ON	F0	Current overload protection	TS08-L-INV
2 times	ON	F1	Outdoor room temperature sensor T4 is in open circuit or has short circuited	TS05-ODU
3 times	ON	F2	Condenser coil temperature sensor T3 is in open circuit or has short circuited	TS05-ODU
4 times	ON	F3	Compressor discharge temperature sensor TP is in open circuit or has short circuited	TS05-ODU
5 times	ON	F4	Outdoor unit EEPROM parameter error	TS01-ODU
6 times	ON	F5	The outdoor fan speed is operating outside of the normal range (for some models)	TS04-ODU
7 times	ON	F6	Evaporator coil outlet temperature sensor T2B is in open circuit or has short circuited	TS05-ODU
11 times	ON	fa	Communication error between indoor two chips (for some models)	TS23

1 times	FLASH	P0	IPM malfunction or IGBT over-strong current protection	TS09-L
2 times	FLASH	P1	Over voltage or over low voltage protection	TS10-L
3 times	FLASH	P2	High temperature protection of IPM module or High pressure protection or Top temperature protection of compressor	TS11-L
4 times	FLASH	P3	Low ambient temperature protection	--
5 times	FLASH	P4	Inverter compressor drive error	TS09-L
6 times	FLASH	--/P5	Indoor units mode conflict	TS14
7 times	FLASH	P6	Low pressure protection	TS13-INV
8 times	FLASH	P7	Outdoor IGBT sensor is faulty(for some models)	TS05-ODU

Troubleshooting:

Test the unit using the remote control. If the unit does not respond to the remote, the indoor PCB requires replacement. If the unit responds, the display board requires replacement.

2.2 Error Display (Outdoor Unit)

Display	Malfunction or Protection	Solution
dF	Defrost	--
FC	Forced cooling	--
RO	Oil return	--
PH	Compressor pre-heating	--
LC	Low ambient cooling	--
E0	Outdoor EEPROM malfunction	TS01-ODU
E2	Indoor/outdoor units communication error	TS02-M
E3	Communication error between outdoor main PCB and IPM board	TS31
E4	Open or short circuit of outdoor unit temperature sensor	TS05-ODU
E5	Over voltage or over low voltage protection	TS10-L
E6	PFC module protection	TS30
E8	The outdoor fan speed is operating outside of the normal range	TS04-ODU
F1	No A Indoor unit coil outlet temperature sensor or connector of sensor is defective	TS05-IDU
F2	No B Indoor unit coil outlet temperature sensor or connector of sensor is defective	TS05-IDU
F3	No C Indoor unit coil outlet temperature sensor or connector of sensor is defective	TS05-IDU
F4	No D Indoor unit coil outlet temperature sensor or connector of sensor is defective	TS05-IDU
F5	No E Indoor unit coil outlet temperature sensor or connector of sensor is defective	TS05-IDU
F6	No F Indoor unit coil outlet temperature sensor or connector of sensor is defective	TS05-IDU
P0	Top temperature protection of compressor	TS11-L
P1	High pressure protection	TS28
P2	Low pressure protection	TS13-INV
P3	Current overload protection	TS08-L-INV
P4	Temperature protection of compressor discharge	TS32
P5	High temperature protection of condenser	TS27-INV
P6	IPM module protection	TS09-L
LP	Low ambient temperature protection	--

5. Outdoor Unit Point Check Function

- A check switch is included on the outdoor PCB.
- Push SW1 to check the unit's status while running. The digital display shows the following codes each time the SW1 is pushed.

Number of Presses	Display	Remark
0	Normal display	Displays running frequency, running state, or malfunction code
1	Quantity of indoor units with working connection	Display Number of indoor unit
		1 1
		2 2
		3 3
		4 4
2	Outdoor unit running mode code	Standby: 0, Fan only: 1, Cooling: 2, Heating: 3, Forced cooling: 4, Forced defrosting: A
3	Indoor unit A capacity	The capacity unit is horse power. If the indoor unit is not connected, the digital display shows the following: "--" (9K:1HP,12K:1.2HP,18K:1.5HP)
4	Indoor unit B capacity	
5	Indoor unit C capacity	
6	Indoor unit D capacity	
7	Indoor unit E capacity	
8	Indoor unit A capacity demand code	Norm code*HP (9K: 1HP,12K: 1.2HP,18K: 1.5HP)
9	Indoor unit B capacity demand code	
10	Indoor unit C capacity demand code	
11	Indoor unit D capacity demand code	
12	Indoor unit E capacity demand code	
13	Outdoor unit amendatory capacity demand code	
14	The frequency corresponding to the total indoor units' amendatory capacity demand	
15	The frequency after the frequency limit	
16	The frequency sending to compressor control chip	

17	Indoor unit A evaporator outlet temperature (T2BA)	If the temperature is lower than -9 °C, the digital display shows "-9." If the temperature is higher than 70 °C, the digital display shows "70." If the indoor unit is not connected, the digital display shows: "--"
18	Indoor unit B evaporator outlet temperature (T2BB)	
19	Indoor unit C evaporator outlet temperature (T2BC)	
20	Indoor unit D evaporator outlet temperature (T2BD)	
21	Indoor unit E evaporator outlet temperature (T2BE)	
22	Indoor unit A room temperature (T1A)	If the temperature is lower than 0 °C, the digital display shows "0." If the temperature is higher than 70 °C, the digital display shows "70." If the indoor unit is not connected, the digital display shows: "--"
23	Indoor unit B room temperature (T1B)	
24	Indoor unit C room temperature (T1C)	
25	Indoor unit D room temperature (T1D)	
26	Indoor unit E room temperature (T1E)	
27	Indoor unit A evaporator temperature (T2A)	If the temperature is lower than -9 °C, the digital display shows "-9." If the temperature is higher than 70 °C, the digital display shows "70." If the indoor unit is not connected, the digital display shows: "--"
28	Indoor unit B evaporator temperature (T2B)	
29	Indoor unit C evaporator temperature (T2C)	
30	Indoor unit D evaporator temperature (T2D)	
31	Indoor unit E evaporator temperature (T2E)	
32	Condenser pipe temperature (T3)	
33	Outdoor ambient temperature (T4)	
34	Compressor discharge temperature (TP)	The display value is between 30–129 °C. If the temperature is lower than 30 °C, the digital display shows "30." If the temperature is higher than 99 °C, the digital display shows single and double digits. For example, if the digital display shows "0.5", the compressor discharge temperature is 105 °C.
35	AD value of current	The display value is a hex number.
36	AD value of voltage	For example, the digital display tube shows "Cd", it means AD value is 205.

37	EXV open angle for A indoor unit	Actual data/4. If the value is higher than 99, the digital display shows single and double digits. For example, if the digital display shows "2.0", the EXV open angle is 120×4=480p.		
38	EXV open angle for B indoor unit			
39	EXV open angle for C indoor unit			
40	EXV open angle for D indoor unit			
41	EXV open angle for E indoor unit			
42	Frequency limit symbol	Bit7	Frequency limit caused by IGBT radiator	The display value is a hexadecimal number. For example, the digital display show 2A, then Bit5=1, Bit3=1, and Bit1=1. This means that a frequency limit may be caused by T4, T3, or the current.
		Bit6	Frequency limit caused by PFC	
		Bit5	Frequency limit caused by T4.	
		Bit4	Frequency limit caused by T2.	
		Bit3	Frequency limit caused by T3.	
		Bit2	Frequency limit caused by T5.	
		Bit1	Frequency limit caused by current	
		Bit0	Frequency limit caused by voltage	
43	Average value of T2	(Sum T2 value of all indoor units)/(number of indoor units in good connection)		
44	Outdoor unit fan motor state	Off: 0, High speed:1, Medium speed: 2, Low speed: 3, Breeze:4, Super breeze: 5		
45	The last error or protection code	00 means no malfunction and protection		
46	F indoor unit capacity	Reserved		
47	F indoor unit capacity demand code			
48	F indoor unit evaporator outlet temperature (T2BF)			
49	F indoor unit room temperature (T1F)			
50	F indoor unit evaporator temperature (T2F)			
51	EXV open angle for F indoor unit			

Automatic wiring/piping correction function

Press the "check switch" on the outdoor unit PCB board 5 seconds until LED display "CE", which mean this function is working, Approximately 5-10 minutes after the switch is pressed, the "CE" disappear the wiring/piping error will be corrected, and wiring/piping is properly connected.

6. Error Diagnosis and Troubleshooting Without Error Code

WARNING

Be sure to turn off unit before any maintenance to prevent damage or injury.

6.1 Remote maintenance

SUGGESTION: When troubles occur, please check the following points with customers before field maintenance.

No.	Problem	Solution
1	Unit will not start	Page 139~140
2	The power switch is on but fans will not start	Page 139~140
3	The temperature on the display board cannot be set	Page 139~140
4	Unit is on but the wind is not cold(hot)	Page 139~140
5	Unit runs, but shortly stops	Page 139~140
6	The unit starts up and stops frequently	Page 139~140
7	Unit runs continuously but insufficient cooling(heating)	Page 139~140
8	Cool can not change to heat	Page 139~140
9	Unit is noisy	Page 139~140

6.2 Field maintenance

	Problem	Solution
1	Unit will not start	Page 141~142
2	Compressor will not start but fans run	Page 141~142
3	Compressor and condenser (outdoor) fan will not start	Page 141~142
4	Evaporator (indoor) fan will not start	Page 141~142
5	Condenser (Outdoor) fan will not start	Page 141~142
6	Unit runs, but shortly stops	Page 141~142
7	Compressor short-cycles due to overload	Page 141~142
8	High discharge pressure	Page 141~142
9	Low discharge pressure	Page 141~142
10	High suction pressure	Page 141~142
11	Low suction pressure	Page 141~142
12	Unit runs continuously but insufficient cooling	Page 141~142
13	Too cool	Page 141~142
14	Compressor is noisy	Page 141~142
15	Horizontal louver can not revolve	Page 141~142

1.Remote Maintenance	Electrical Circuit				Refrigerant Circuit													
Possible causes of trouble	Power failure																	
	The main power tripped																	
	Loose connections																	
	Faulty transformer																	
	The voltage is too high or too low																	
	The remote control is powered off																	
	Broken remote control																	
	Dirty air filter																	
	Dirty condenser fins																	
	The setting temperature is higher/lower than the room's(cooling/heating)																	
	The ambient temperature is too high/low when the mode is cooling/heating																	
	Fan mode																	
	SILENCE function is activated(optional function)																	
Frosting and defrosting frequently																		
Unit will not start	☆	☆	☆	☆														
The power switch is on but fans will not start			☆	☆	☆													
The temperature on the display board cannot be set						☆	☆											
Unit is on but the wind is not cold(hot)										☆	☆	☆						
Unit runs, but shortly stops					☆					☆	☆							
The unit starts up and stops frequently					☆						☆					☆		
Unit runs continuously but insufficient cooling(heating)								☆	☆	☆	☆			☆				
Cool can not change to heat																		
Unit is noisy																		
Test method / remedy	Test voltage																	
	Close the power switch																	
	Inspect connections - tighten																	
	Change the transformer																	
	Test voltage																	
	Replace the battery of the remote control																	
	Replace the remote control																	
	Clean or replace																	
	Clean																	
	Adjust the setting temperature																	
	Turn the AC later																	
	Adjust to cool mode																	
	Turn off SILENCE function.																	
Turn the AC later																		

1.Remote Maintenance	Others				
Possible causes of trouble	Heavy load condition				
	Loosen hold down bolts and / or screws				
	Bad airproof				
	The air inlet or outlet of either unit is blocked				
	Interference from cell phone towers and remote boosters				
	Shipping plates remain attached				
Unit will not start					
The power switch is on but fans will not start					☆
The temperature on the display board cannot be set					
Unit is on but the wind is not cold(hot)					
Unit runs, but shortly stops					
The unit starts up and stops frequently				☆	
Unit runs continuously but insufficient cooling(heating)	☆		☆	☆	
Cool can not change to heat					
Unit is noisy		☆			☆
Test method / remedy	Check heat load				
	Tighten bolts or screws				
	Close all the windows and doors				
	Remove the obstacles				
	Reconnect the power or press ON/OFF button on remote control to restart operation				
	Remove them				

2.Field Maintenance	Refrigerant Circuit														Others								
Possible causes of trouble	Compressor stuck	Shortage of refrigerant	Restricted liquid line	Dirty air filter	Dirty evaporator coil	Insufficient air through evaporator coil	Overcharge of refrigerant	Dirty or partially blocked condenser	Air or incompressible gas in refrigerant cycle	Short cycling of condensing air	High temperature condensing medium	Insufficient condensing medium	Broken compressor internal parts	Inefficient compressor	Expansion valve obstructed	Expansion valve or capillary tube closed completely	Leaking power element on expansion valve	Poor installation of feeler bulb	Heavy load condition	Loosen hold down bolts and / or screws	Shipping plates remain attached	Poor choices of capacity	Contact of piping with other piping or external plate
Unit will not start																							
Compressor will not start but fans run	☆																						
Compressor and condenser (outdoor) fan will not start																							
Evaporator (indoor) fan will not start																							
Condenser (Outdoor) fan will not start																							
Unit runs, but shortly stops		☆	☆				☆	☆								☆	☆

8. Troubleshooting by Error Code

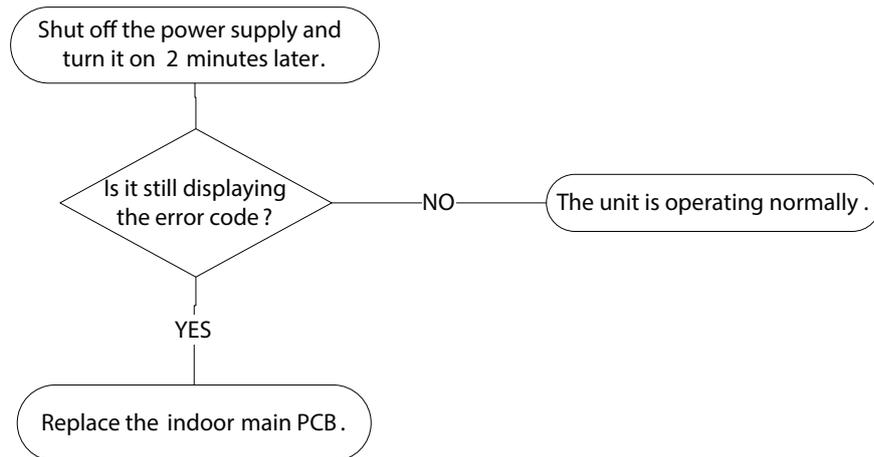

TS01-IDU: Indoor EEPROM parameter error diagnosis and solution

Description : Indoor PCB main chip does not receive feedback from EEPROM chip.

Recommended parts to prepare:

- Indoor PCB

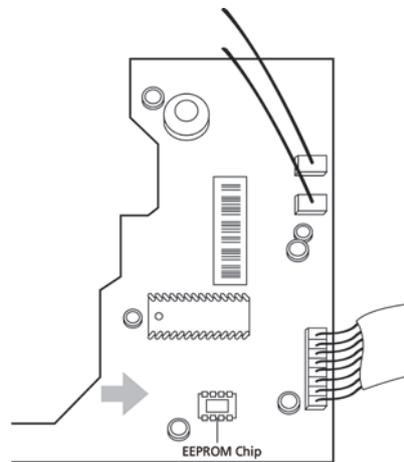

Troubleshooting and repair:

Remarks:

EEPROM: A read-only memory whose contents can be erased and reprogrammed using a pulsed voltage.

The location of the EEPROM chip on the indoor PCB is shown in the following image:

Note: This pictures are only for reference, actual appearance may vary.

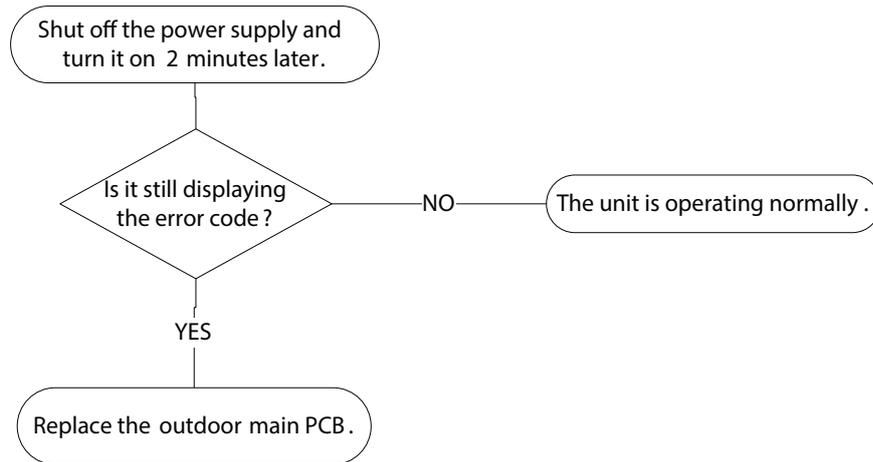

TS01-ODU: Outdoor EEPROM parameter error or Compressor driven chip EEPROM parameter error diagnosis and solution

Description : Outdoor PCB main chip does not receive feedback from EEPROM chip or compressor driven chip.

Recommended parts to prepare:

- Outdoor PCB

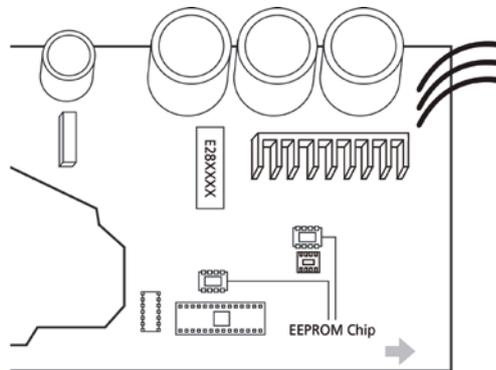

Troubleshooting and repair:

Remarks:

EEPROM: A read-only memory whose contents can be erased and reprogrammed using a pulsed voltage.

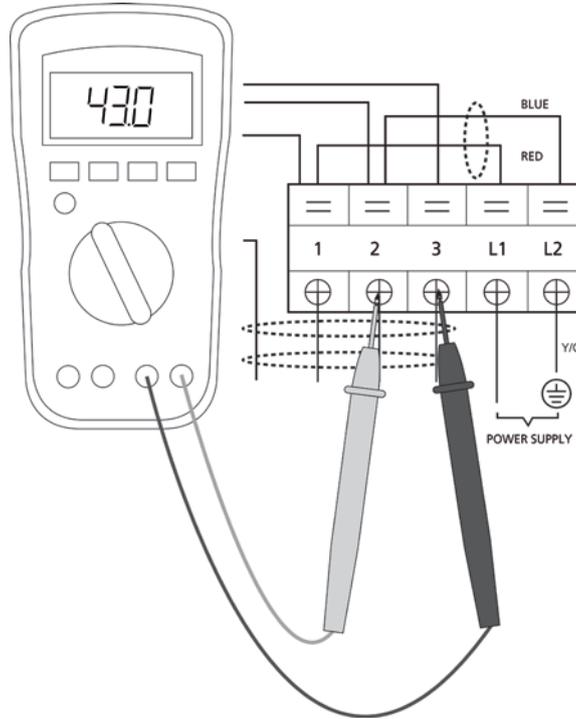

The location of the EEPROM chip on the outdoor PCB is shown in the following image:

Note: For certain models, outdoor PCB could not be removed separately. In this case, the outdoor electric control box should be replaced as a whole. This pictures are only for reference, actual appearance may vary.

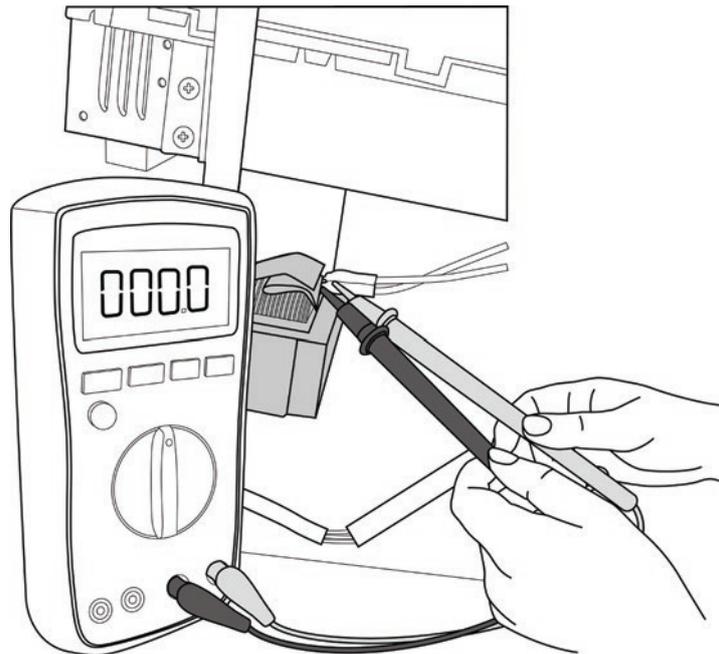

Remarks:

- Use a multimeter to test the DC voltage between 2 port(or S or L2 port) and 3 port(or N or S port) of outdoor unit. The red pin of multimeter connects with 2 port(or S or L2 port) while the black pin is for 3 port(or N or S port) .
- When AC is normal running, the voltage is moving alternately as positive values and negative values
- If the outdoor unit has malfunction, the voltage has always been the positive value.
- While if the indoor unit has malfunction, the voltage has always been a certain value.

S and N
or
L2 and S
or
2 and 3

- Use a multimeter to test the resistance of the reactor which does not connect with capacitor.
- The normal value should be around zero ohm. Otherwise, the reactor must have malfunction.

Note: The picture and the value are only for reference, actual condition and specific value may vary.

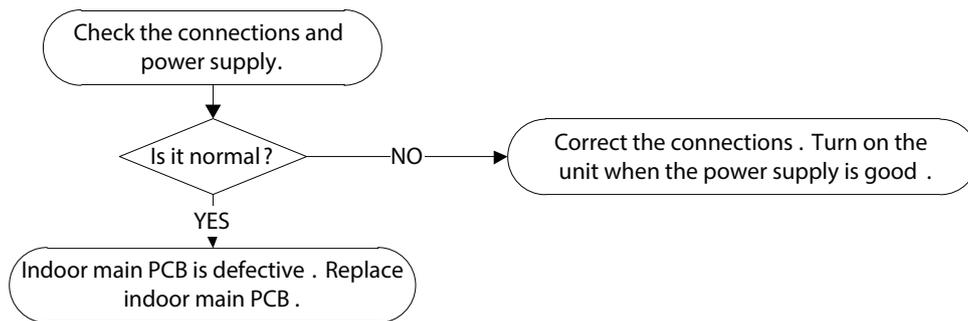

TS03: Zero crossing detection error diagnosis and solution

Description : When PCB does not receive zero crossing signal feedback for 4 minutes or the zero crossing signal time interval is abnormal.

Recommended parts to prepare:

- Connection wires
- Indoor main PCB

Troubleshooting and repair:

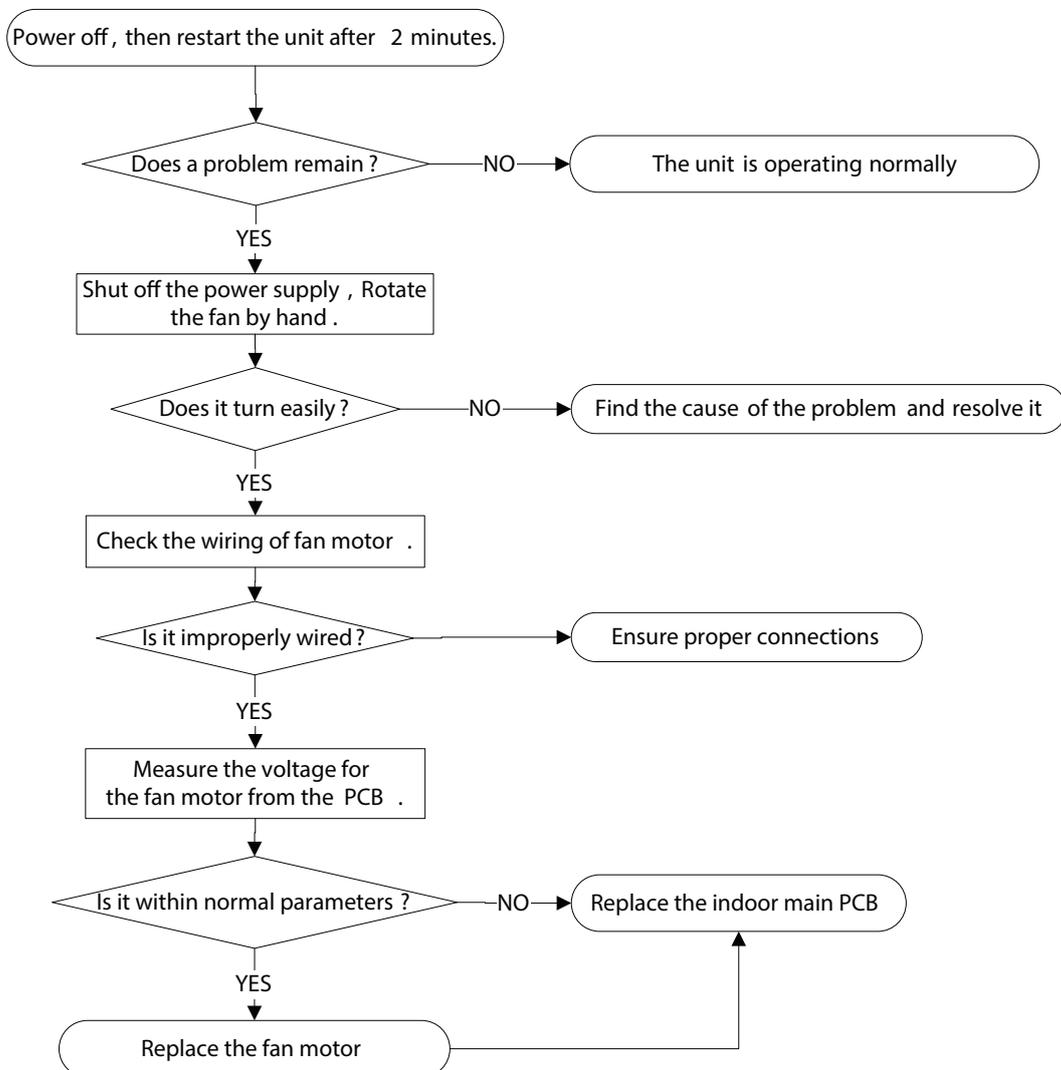

TS04-L-IDU: The Indoor fan speed is operating outside of normal range diagnosis and solution)

Description : When indoor fan speed keeps too low or too high for a certain time, the LED displays the failure code and the AC turns off.

Recommended parts to prepare:

- Connection wires
- Fan assembly
- Fan motor
- Indoor main PCB

Troubleshooting and repair:

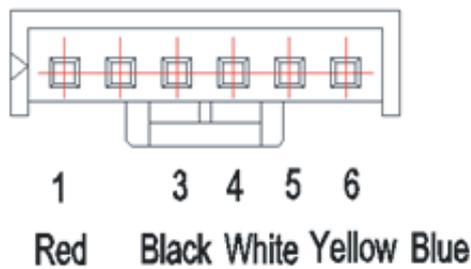

Index:

1. DC Fan Motor(control chip is in fan motor)

Power on and when the unit is in standby, measure the voltage of pin1-pin3, pin4-pin3 in fan motor connector. If the value of the voltage is not in the range showing in below table, the PCB must has problems and need to be replaced.

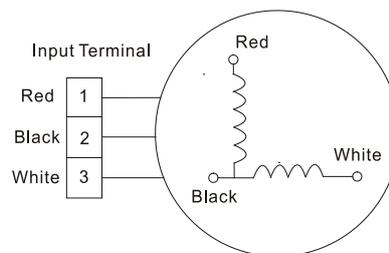

- DC motor voltage input and output :

No.	Color	Signal	Voltage
1	Red	Vs/Vm	192V~380V
2	---	---	---
3	Black	GND	0V
4	White	Vcc	13.5-16.5V
5	Yellow	Vsp	0~6.5V
6	Blue	FG	13.5-16.5V

2. Indoor AC Fan Motor

Power on and set the unit running in fan mode at high fan speed. After running for 15 seconds, measure the voltage of pin1 and pin2. If the value of the voltage is less than 100V(208~240V power supply) or 50V (115V power supply), the PCB must has problems and need to be replaced.

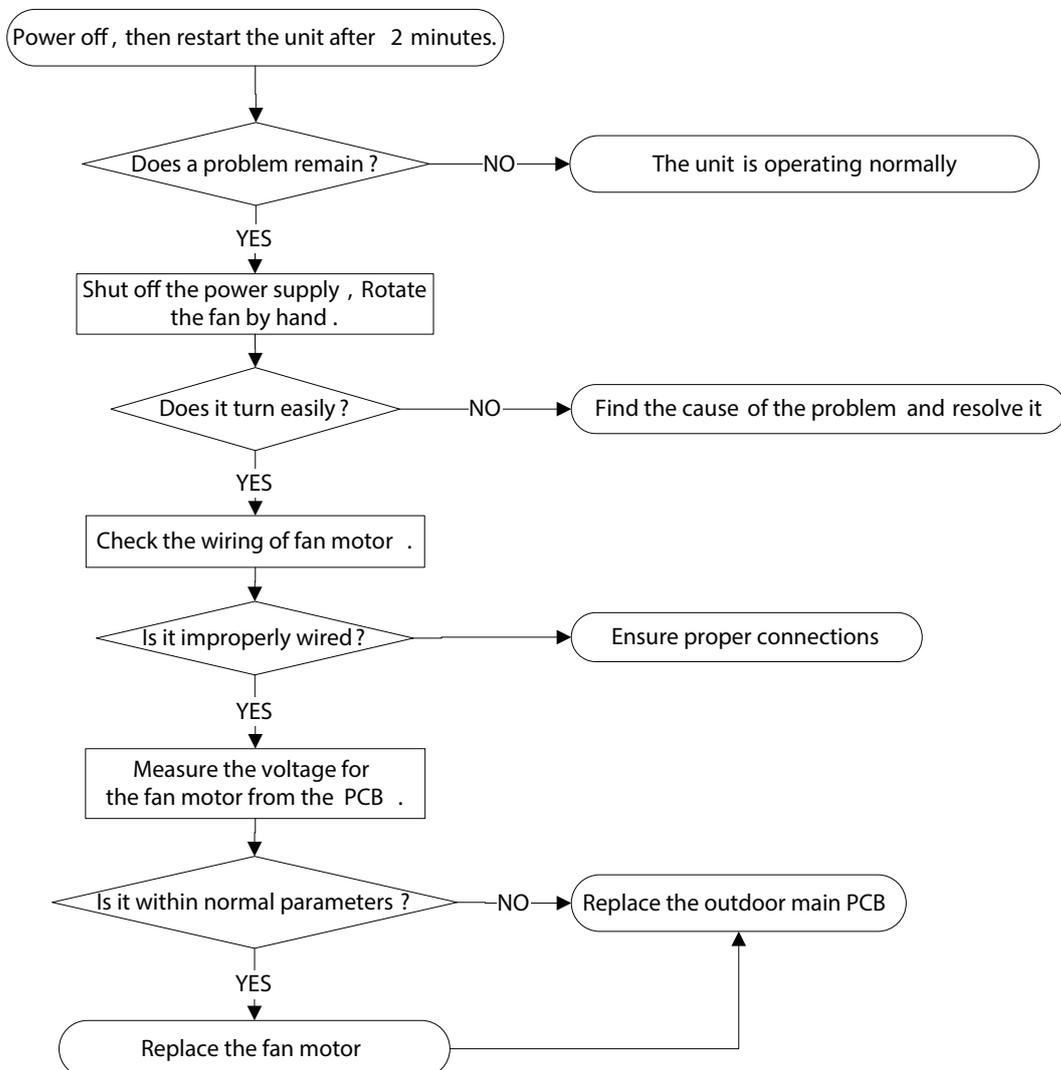

TS04-ODU: The outdoor fan speed is operating outside of normal range diagnosis and solution)

Description : When outdoor fan speed keeps too low or too high for a certain time, the LED displays the failure code and the AC turns off.

Recommended parts to prepare:

- Connection wires
- Fan assembly
- Fan motor
- Outdoor main PCB

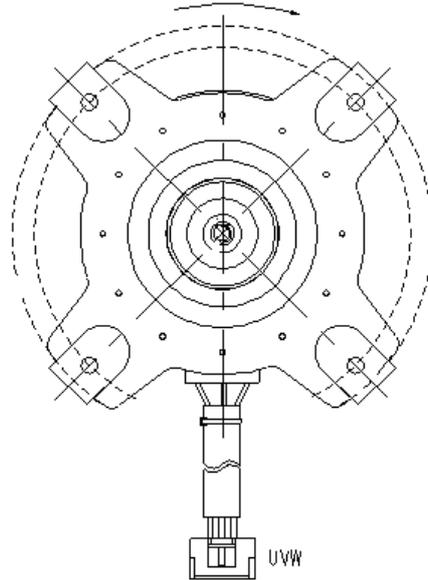

Troubleshooting and repair:

Index:

1. Outdoor DC Fan Motor (control chip is in outdoor PCB)

Release the UVW connector. Measure the resistance of U-V, U-W, V-W. If the resistance is not equal to each other, the fan motor must have problems and need to be replaced. otherwise the PCB must have problems and need to be replaced.

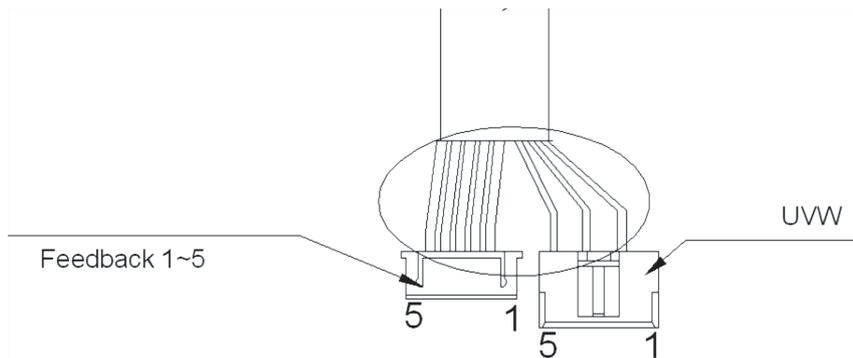

2. Outdoor DC Fan Motor (DC motor that control chip on the PCB)

1)Release the UVW connector. Measure the resistance of U-V, U-W, V-W. If the resistance is not equal to each other, the fan motor must have problems and need to be replaced. Otherwise, go to step 2).

2)Power on and when the unit is in standby, measure the voltage of pin4-5 in feedback signal connector. If the value is not 5V, change the PCB. Otherwise, go to step 3).

3)Rotate the fan by hand, measure the voltage of pin1-5, pin 2-5 and pin 3-5 in feedback signal connector. If any voltage is not positive voltage fluctuation, the fan motor must have problems and need to be replaced.

NO.	1	2	3	4	5
Color	Orange	Grey	White	Pink	Black
Signal	Hu	Hv	Hw	Vcc	GND

Color	Red	Blue	Yellow
Signal	W	V	U

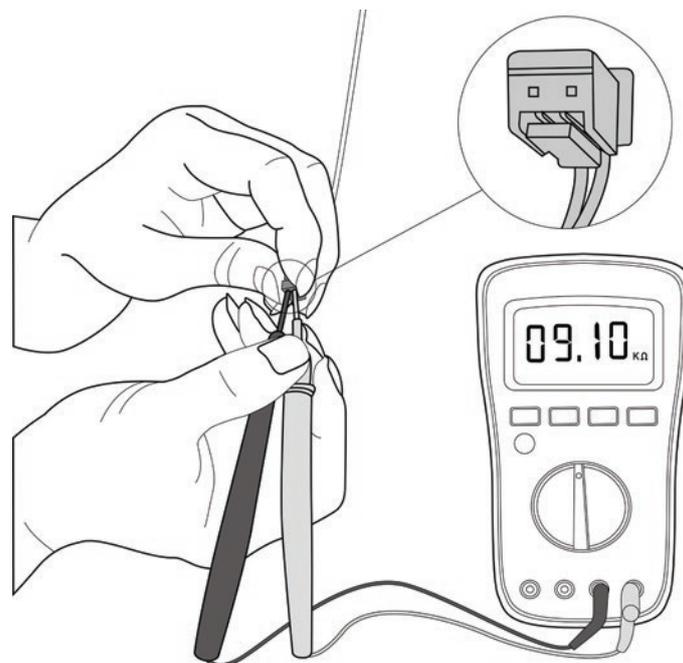

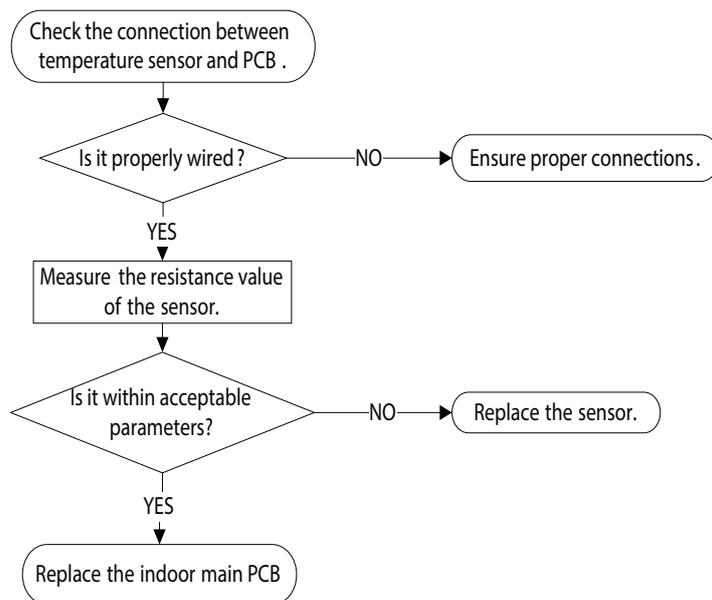

TS05-IDU: Open circuit or short circuit of indoor temperature sensor(T1, T2) diagnosis and solution

Description : If the sampling voltage is lower than 0.06V or higher than 4.94V, the LED displays the failure code.

Recommended parts to prepare:

- Connection wires
- Sensors
- Indoor main PCB

Troubleshooting and repair:

Note: The picture and the value are only for reference, actual condition and specific value may vary.

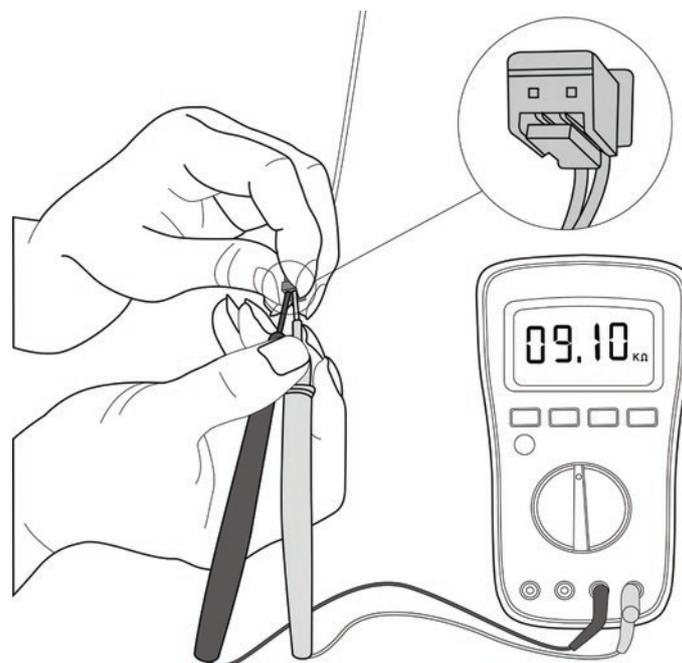

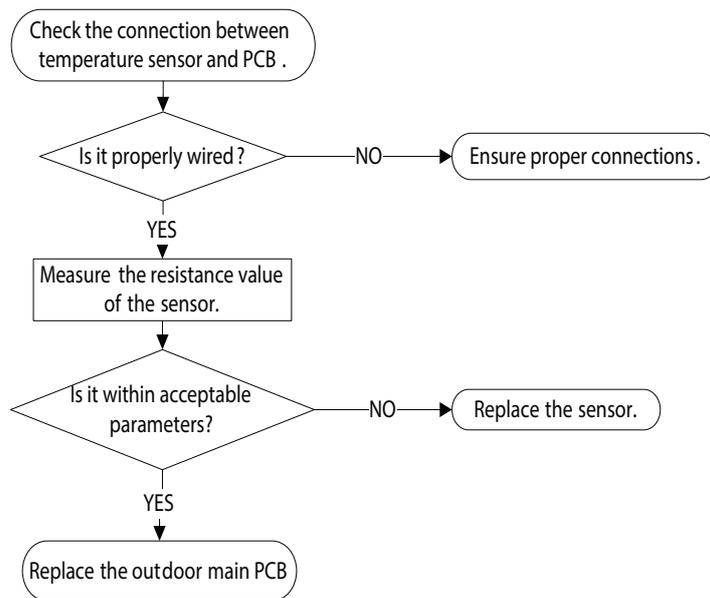

TS05-ODU: Open circuit or short circuit of outdoor temperature sensor(T3, T4, TP, T2B,TH) diagnosis and solution

Description : If the sampling voltage is lower than 0.06V or higher than 4.94V, the LED displays the failure code.

Recommended parts to prepare:

- Connection wires
- Sensors
- Outdoor main PCB

Troubleshooting and repair:

Note: For certain models, outdoor PCB could not be removed separately. In this case, the outdoor electric control box should be replaced as a whole. For certain models, outdoor unit uses combination sensor, T3,T4 and TP are the same of sensor. This picture and the value are only for reference, actual appearance and value may vary.

TS08-L-INV: Current overload protection diagnosis and solution

Description : An abnormal current rise is detected by checking the specified current detection circuit.

Recommended parts to prepare:

- Connection wires
- Rectifier
- PFC circuit or reactor
- Blocked refrigeration piping system
- Pressure switch
- Outdoor fan
- IPM module board
- Outdoor PCB

Troubleshooting and repair :

Note: For certain models, outdoor PCB could not be removed separately. In this case, the outdoor electric control box should be replaced as a whole.

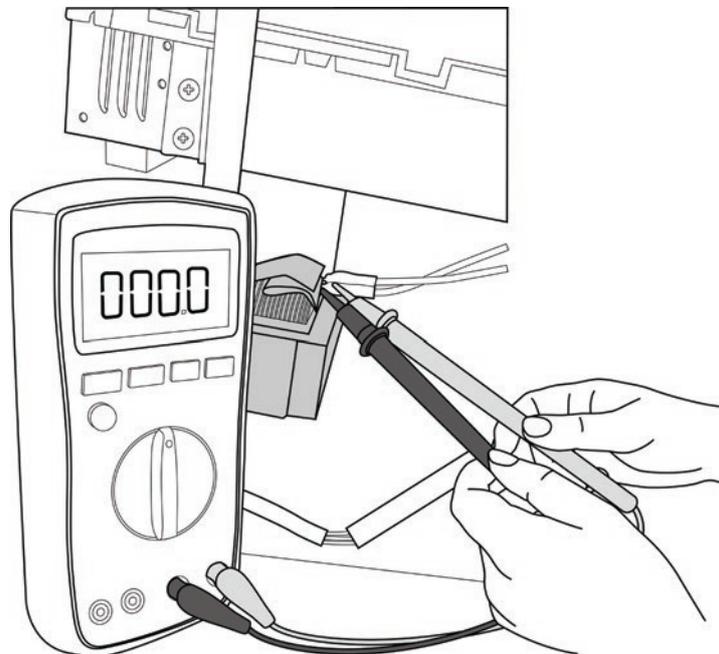

Index:

1. Normal voltage of P and N

208-240V(1-phase,3-phase)		380-415V(3-phase)	
In standby			
around 310VDC		around 530VDC	
In operation			
With passive PFC module	With partial active PFC module	With fully active PFC module	/
>200VDC	>310VDC	>370VDC	>450VDC

2.Reactor Check

Measure the resistance and voltage (to ground) of the reactor. The normal resistance should be around 0.1 ohm. Otherwise, the reactor must have malfunction.

Note: The picture and the value are only for reference, actual condition and specific value may vary.

TS09-L: IPM malfunction or IGBT over-strong current protection or Inverter compressor drive error diagnosis and solution

Description: When the voltage signal the IPM sends to the compressor drive chip is abnormal, the LED displays the failure code and the AC turns off.

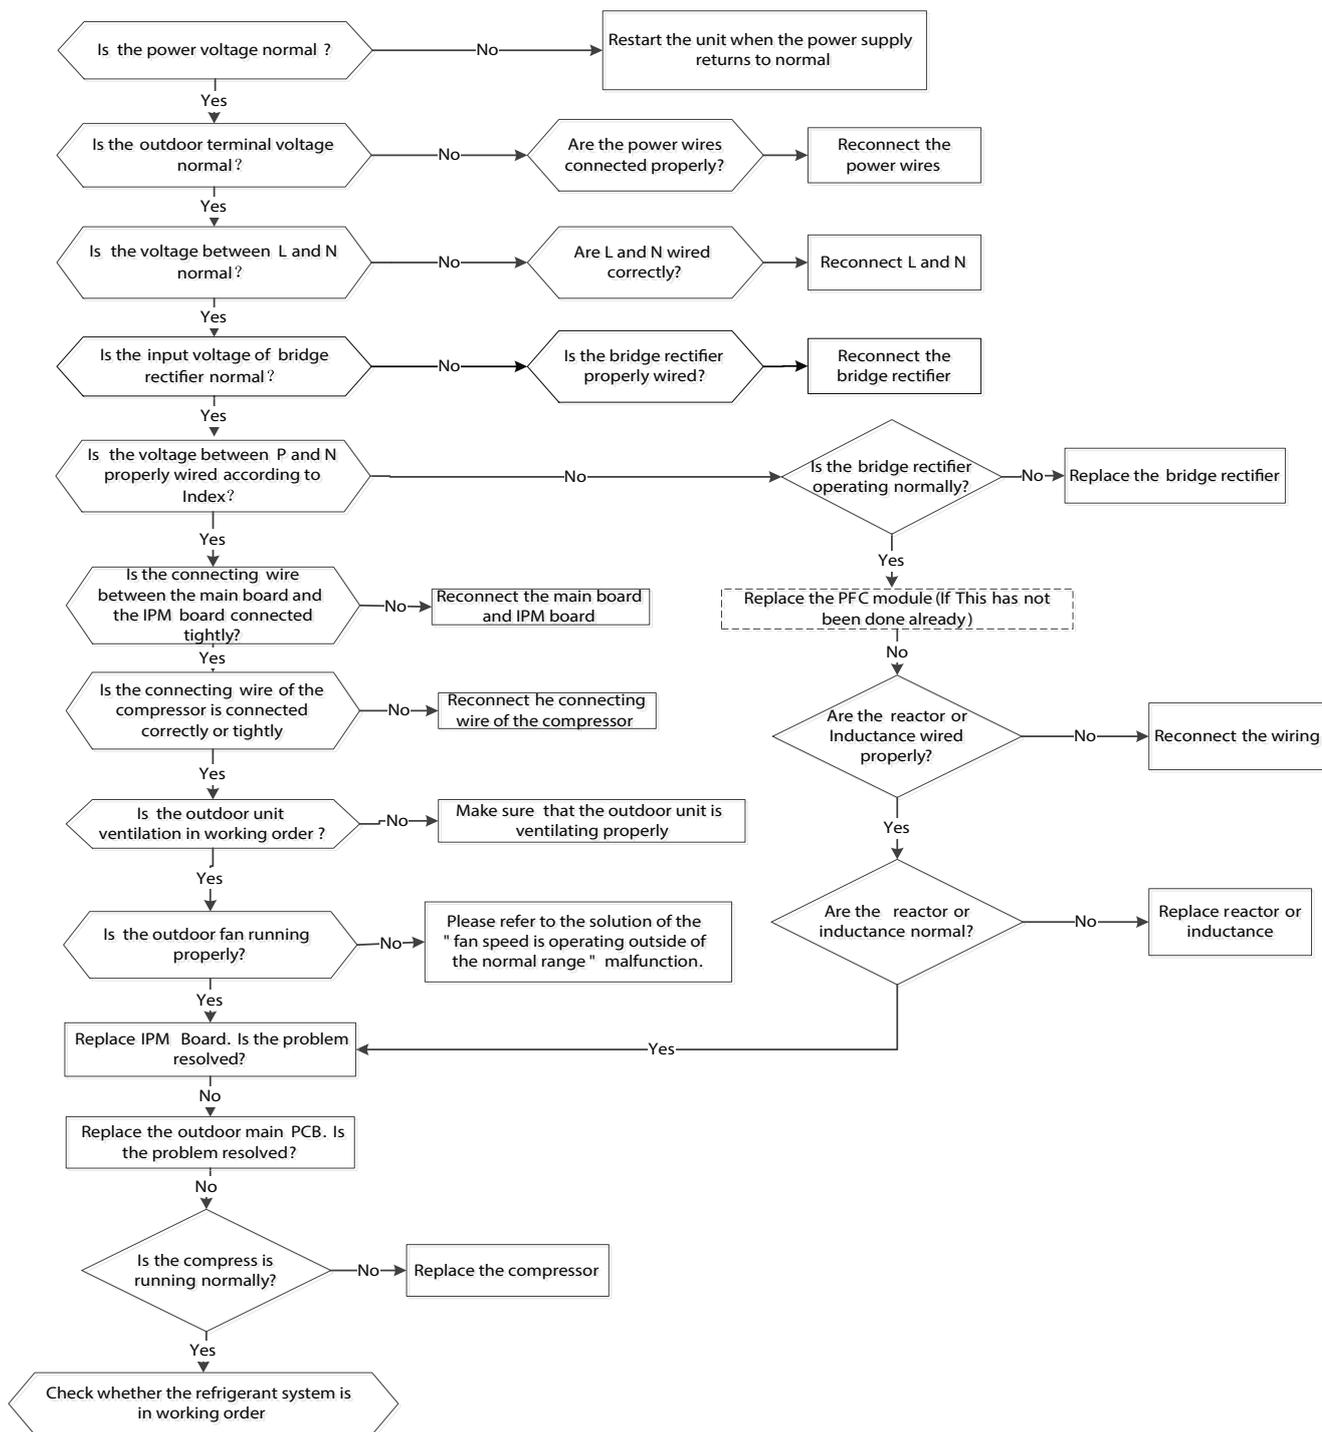

Or an abnormal inverter compressor drive is detected by a special detection circuit, including communication signal detection, voltage detection, compressor rotation speed signal detection and so on.

Recommended parts to prepare:

- Connection wires
- IPM module board
- Outdoor fan assembly
- Compressor
- Outdoor PCB
- High-voltage components
- PFC circuit or reactor

Troubleshooting and repair:

First, test the resistance between every two ports of U, V, the W of the IPM and P, N. If any of the results is 0 or close to 0, the IPM is defective. If not, follow the following procedure:

Note: For certain models, outdoor PCB could not be removed separately. In this case, the outdoor electric control box should be replaced as a whole.

Index:

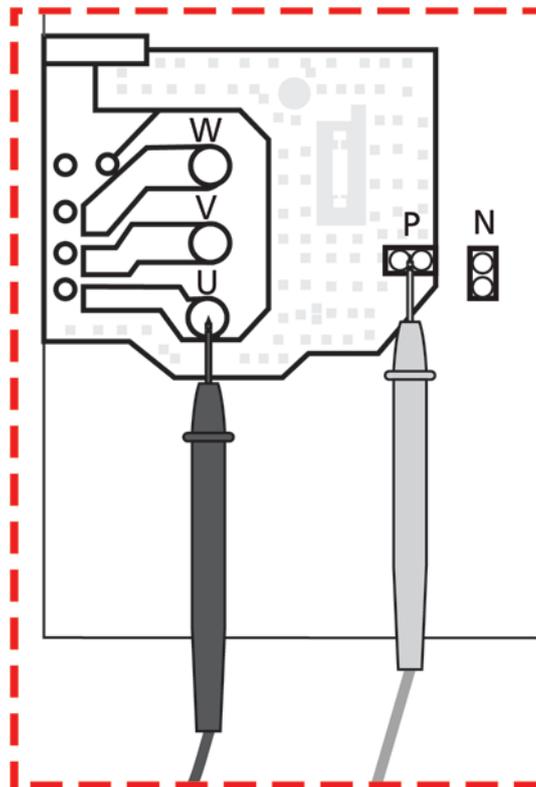

1. IPM Continuity Check

! WARNING

Electricity remains in capacitors even when the power supply is off.
Ensure the capacitors are fully discharged before troubleshooting.

1. Turn off outdoor unit and disconnect power supply.
2. Discharge electrolytic capacitors and ensure all energy-storage unit has been discharged.
3. Disassemble outdoor PCB or disassemble IPM board.
4. Measure the resistance value between P and U(V, W, N); U(V, W) and N.

Digital tester		Resistance value	Digital tester		Resistance value
(+)Red	(-)Black		(+)Red	(-)Black	
P	N	∞ (Several M Ω)	U	N	∞ (Several M Ω)
	U				
	V				
	W				
			-		

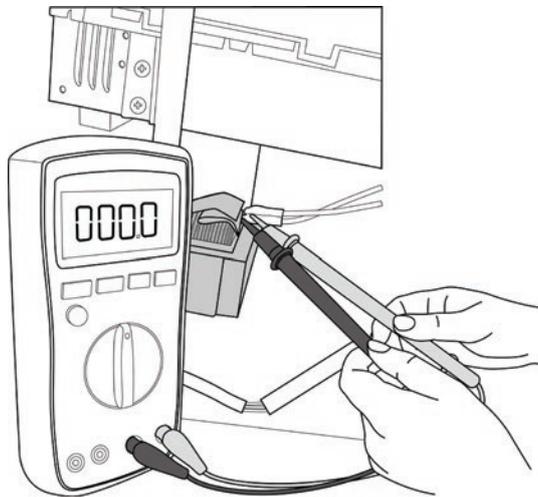

2. Normal voltage of P and N

208-240V(1-phase,3-phase)			380-415V(3-phase)
In standby			
around 310VDC			around 530VDC
In operation			
With passive PFC module	With partial active PFC module	With fully active PFC module	/
>200VDC	>310VDC	>370VDC	>450VDC

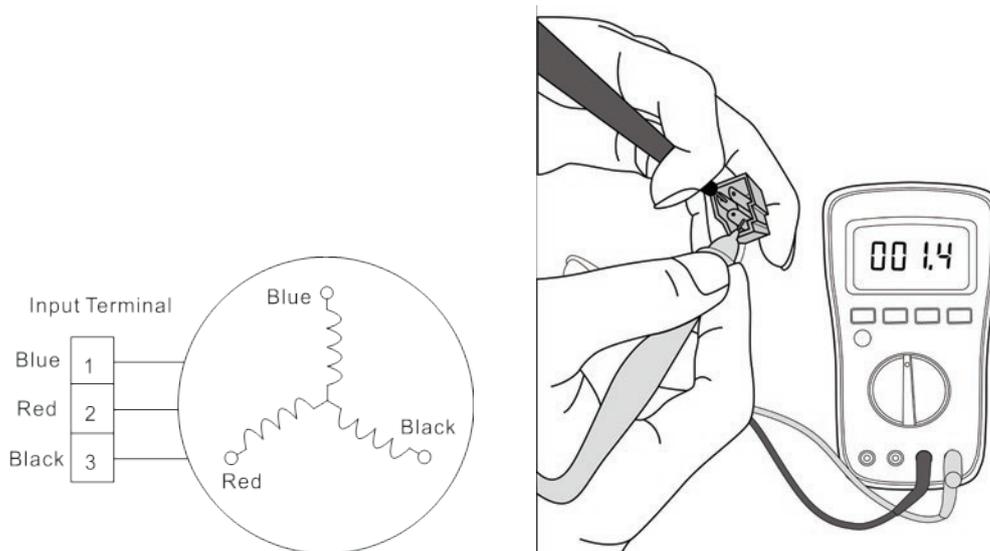

3. Reactor Check

Measure the resistance and voltage (to ground) of the reactor. The normal resistance should be around 0.1 ohm. Otherwise, the reactor must have malfunction.

4. Compressor check

Disconnect the compressor and check the resistance between U-V, V-W and U-W, and all 3 values should be equal. If not, the compressor is faulty and should be replaced.

Note: The picture and the value are only for reference, actual condition and specific value may vary.

TS10-L: Over voltage or too low voltage protection diagnosis and solution

Description: Abnormal increases or decreases in voltage are detected by checking the specified voltage detection circuit.

Recommended parts to prepare:

- Power supply wires
- IPM module board
- PCB
- Reactor

Troubleshooting and repair:

Note: For certain models, outdoor PCB could not be removed separately. In this case, the outdoor electric control box should be replaced as a whole.

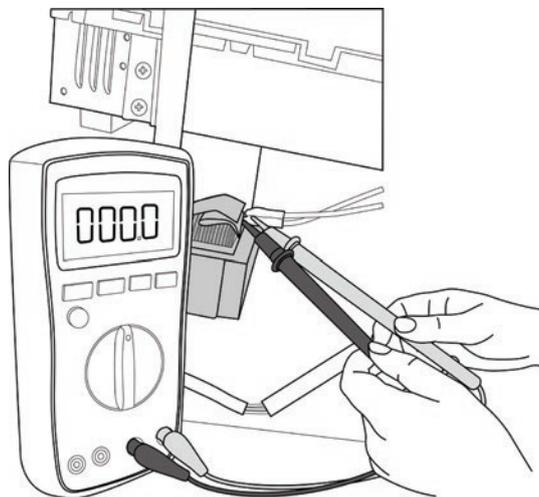

Index:

1. Normal voltage of P and N

208-240V(1-phase,3-phase)		380-415V(3-phase)	
In standby			
around 310VDC		around 530VDC	
In operation			
With passive PFC module	With partial active PFC module	With fully active PFC module	/
>200VDC	>310VDC	>370VDC	>450VDC

2. Reactor Check

Measure the resistance and voltage (to ground) of the reactor. The normal resistance should be around 0.1 ohm. Otherwise, the reactor must have malfunction.

Note: The picture and the value are only for reference, actual condition and specific value may vary.

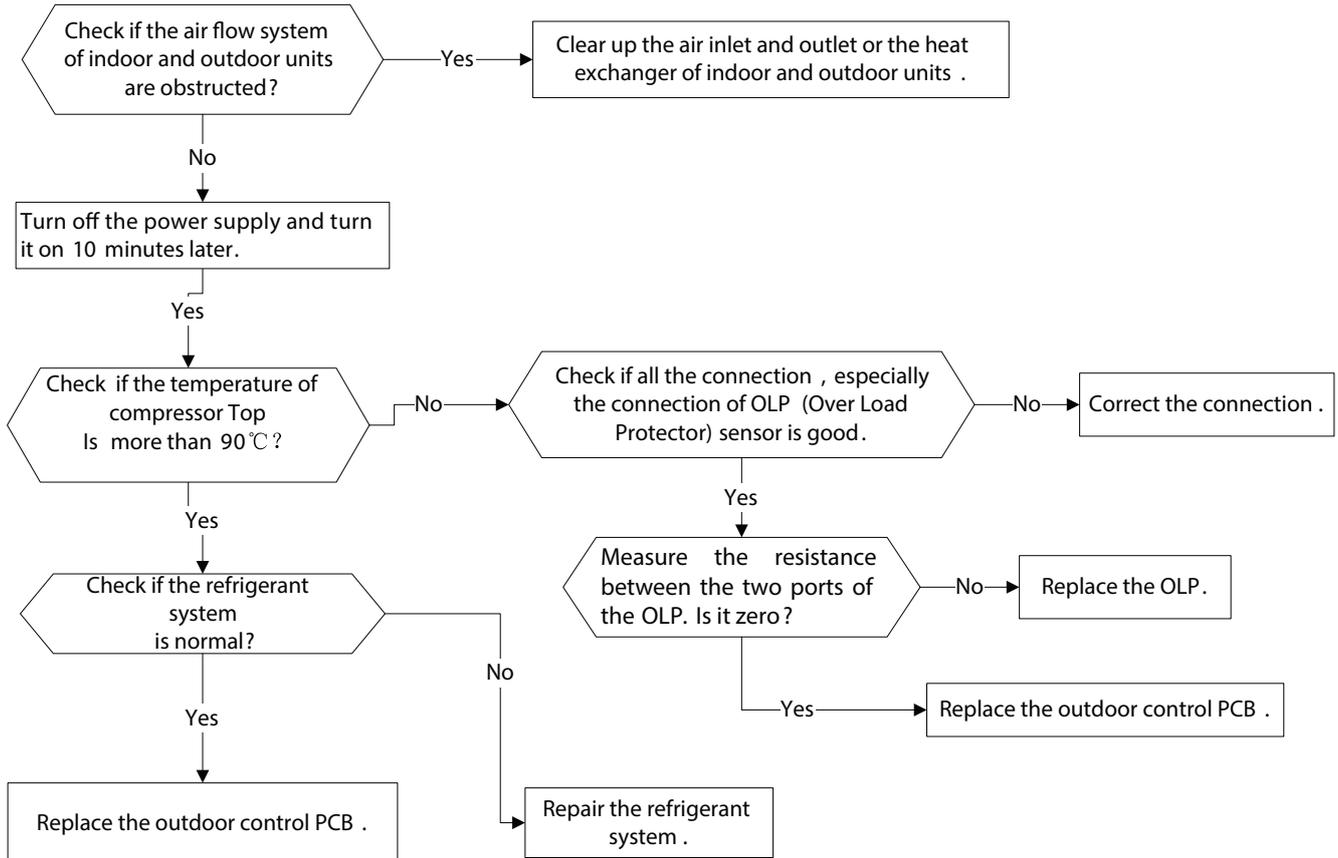

TS11-L: Top temperature protection of compressor diagnosis and solution

Description: If the sampling voltage is not 5V, the LED will display the failure.

Recommended parts to prepare:

- Connection wires
- Outdoor PCB
- Over load protector

Troubleshooting and repair:

TS14: Indoor units mode conflict (match with multi outdoor unit)

Description: The indoor units cannot work cooling mode and heating at same time. Heating mode has a priority.

- Suppose Indoor unit A working in cooling mode or fan mode, and indoor unit B is set to heating mode, then A will change to off and B will work in heating mode.
- Suppose Indoor unit A working in heating mode, and indoor unit B is set to cooling mode or fan mode, then B will change to stand by and A will be no change.

	Cooling mode	Heating Mode	Fan	Off
Cooling mode	No	Yes	No	No
Heating Mode	Yes	No	Yes	No
Fan	No	Yes	No	No
Off	No	No	No	No

Note:

No: No mode conflict

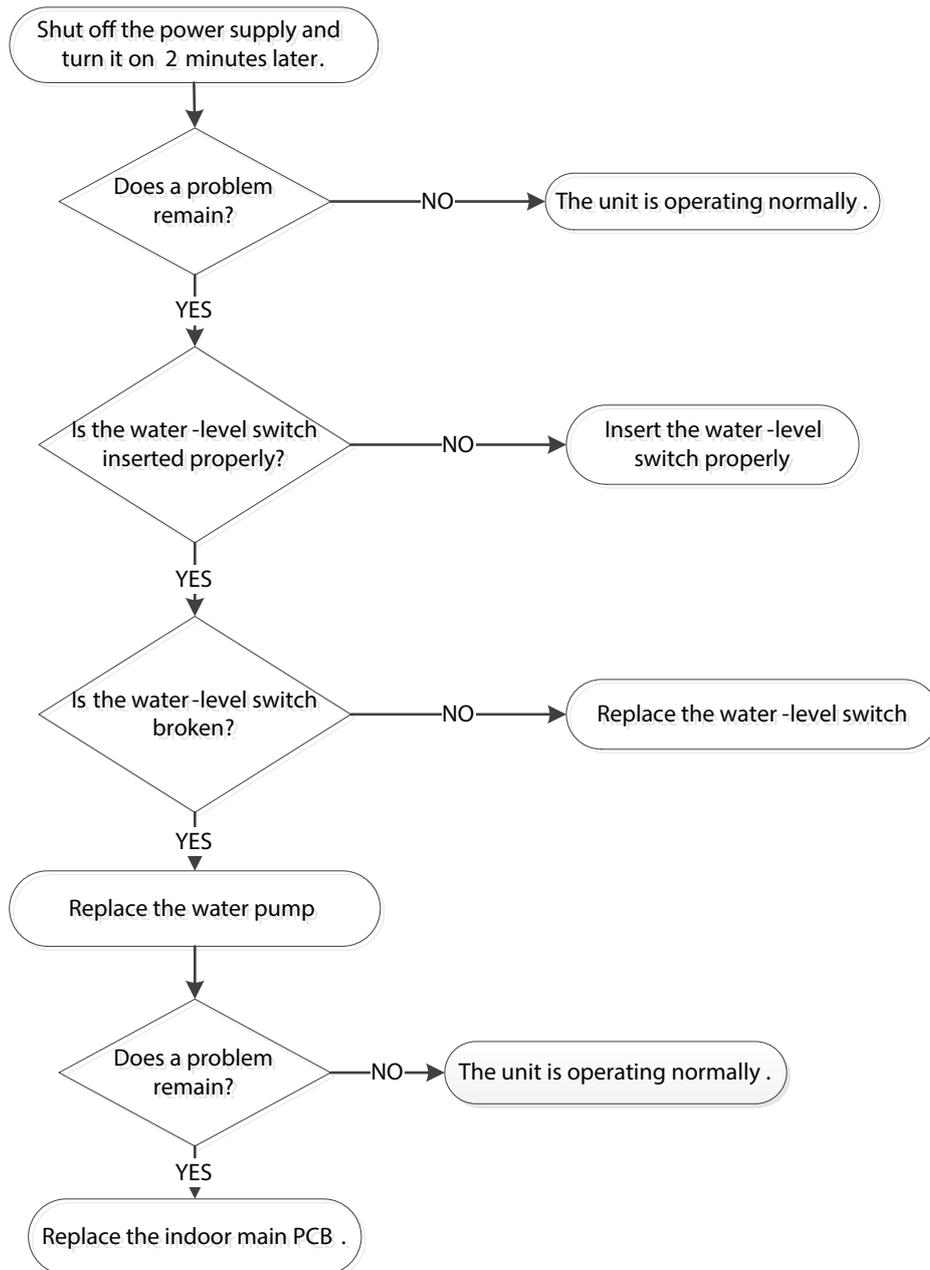

Yes : Mode conflict

TS15: Water-Level Alarm Malfunction Diagnosis and Solution

Description : If the sampling voltage is not 5V, the LED displays the failure code.

Recommended parts to prepare:

- Connection wires
- Water-level switch
- Water pump
- Indoor PCB

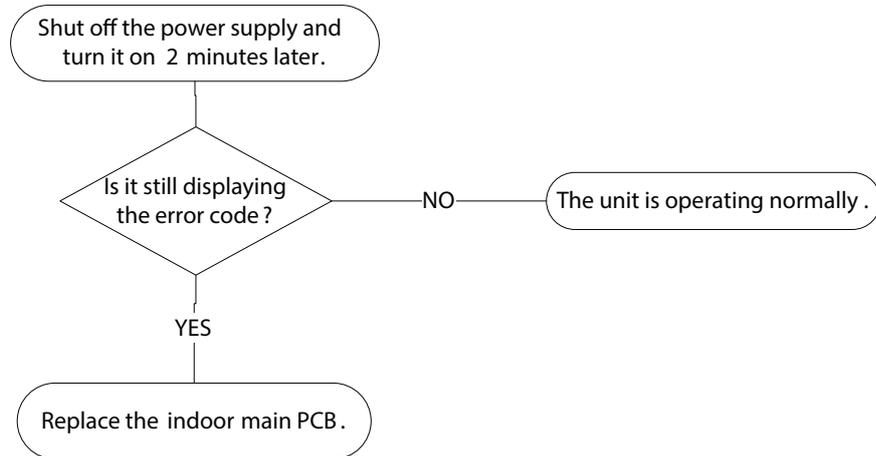

TS23: Communication error between indoor two chips diagnosis and solution

Description : Indoor PCB main chip does not receive feedback from another chip.

Recommended parts to prepare:

- Indoor PCB

Troubleshooting and repair:

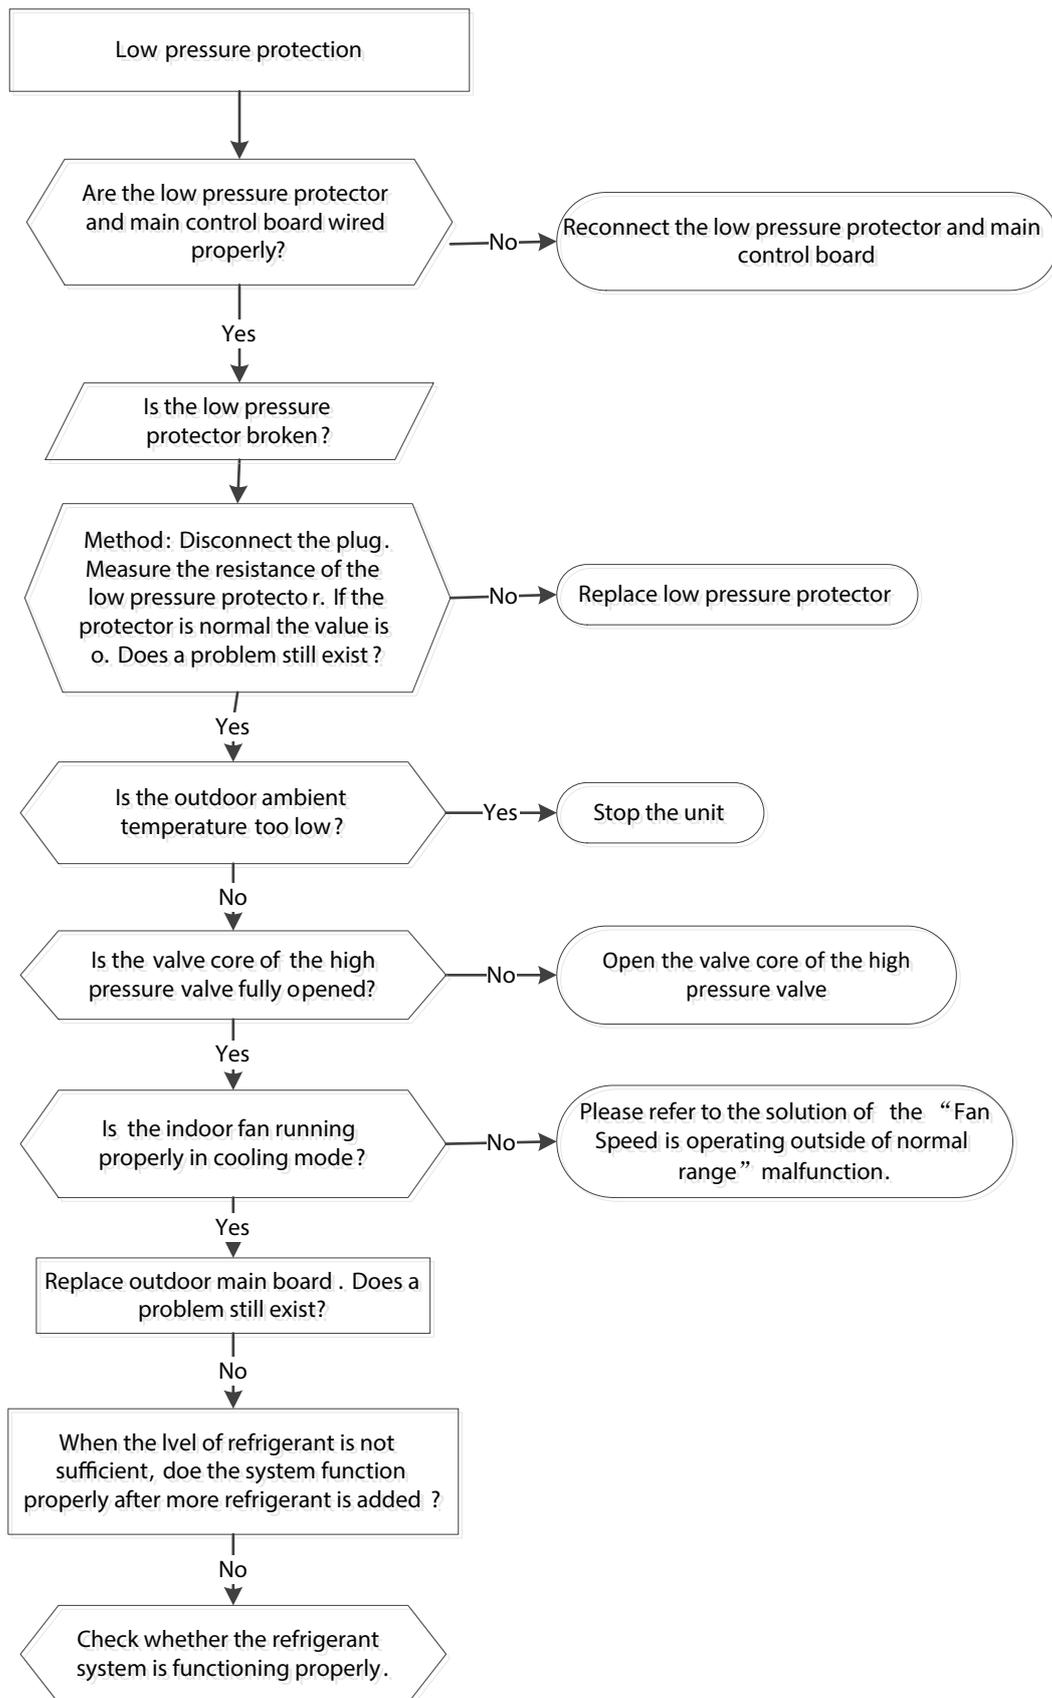

TS13-INV: Low pressure protection diagnosis and solution

Description: Outdoor pressure switch cut off the system because low pressure is lower than 0.13 MPa, the LED displays the failure code.

Recommended parts to prepare:

- Connection wires
- Outdoor PCB
- Low pressure protector
- Refrigerant

Troubleshooting and repair:

Note: For certain models, outdoor PCB could not be removed separately. In this case, the outdoor electric control box should be replaced as a whole.

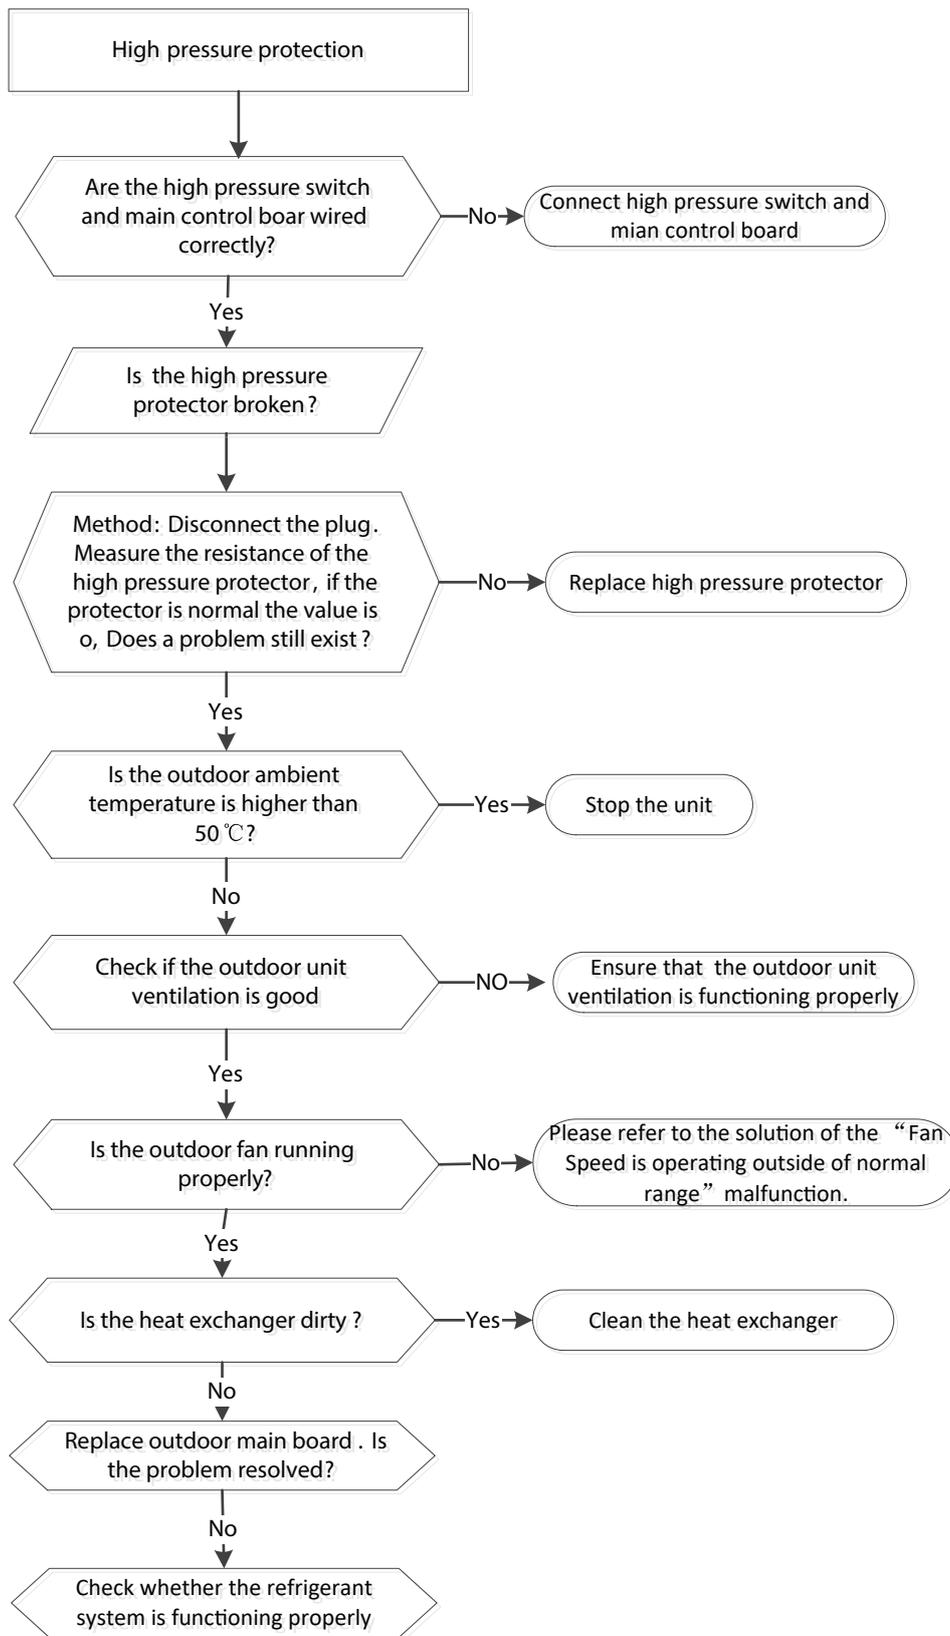

TS28: High pressure protection diagnosis and solution

Description : Outdoor pressure switch cut off the system because high pressure is higher than 4.4 MPa

Recommended parts to prepare:

- Connection wires
- Pressure switch
- Outdoor fan
- Outdoor main PCB

Troubleshooting and repair:

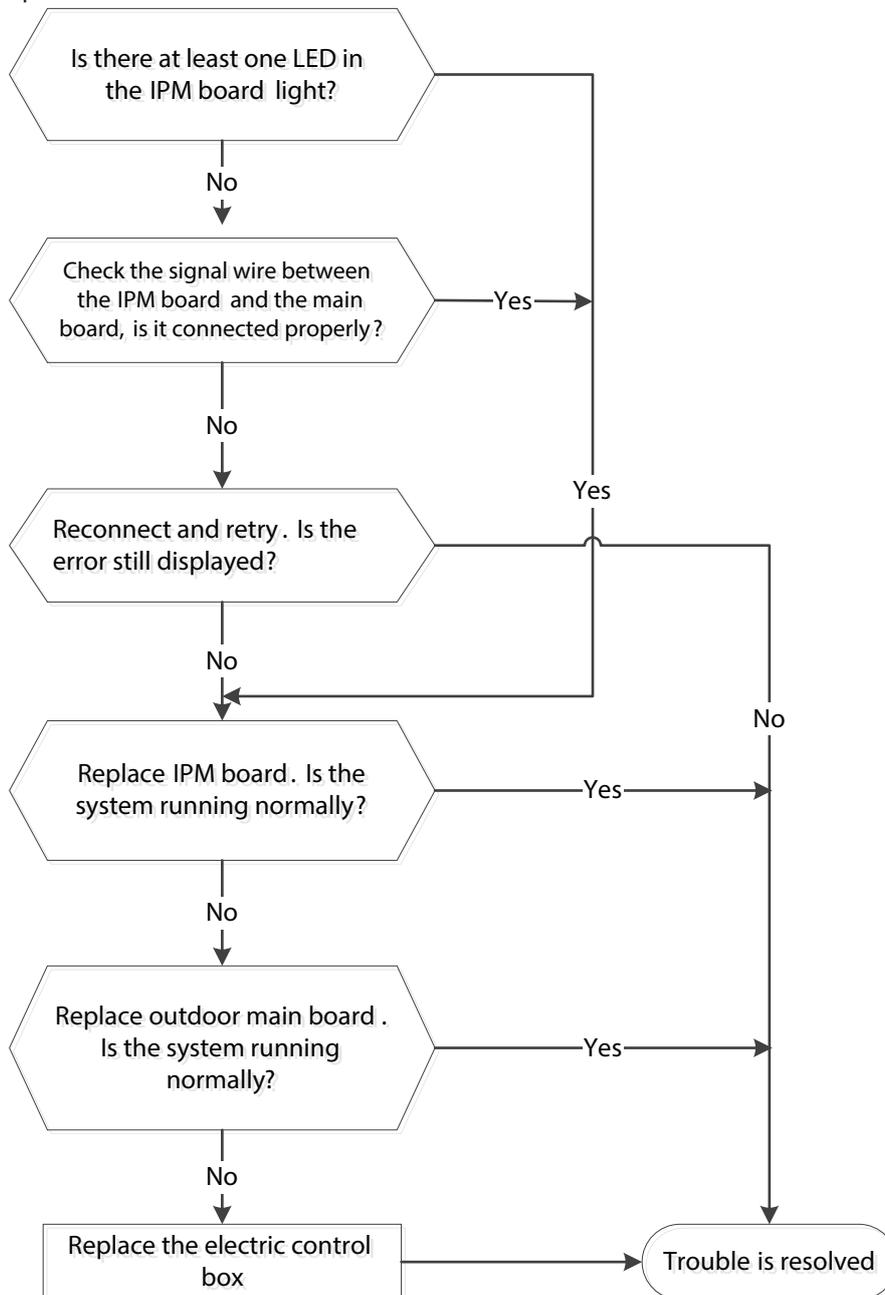

TS31: Communication error between outdoor main PCB and IPM board diagnosis and solution

Description : The main PCB cannot detect the IPM board.

Recommended parts to prepare:

- Connection wires
- IPM board
- Outdoor main PCB
- Electric control box

Troubleshooting and repair:

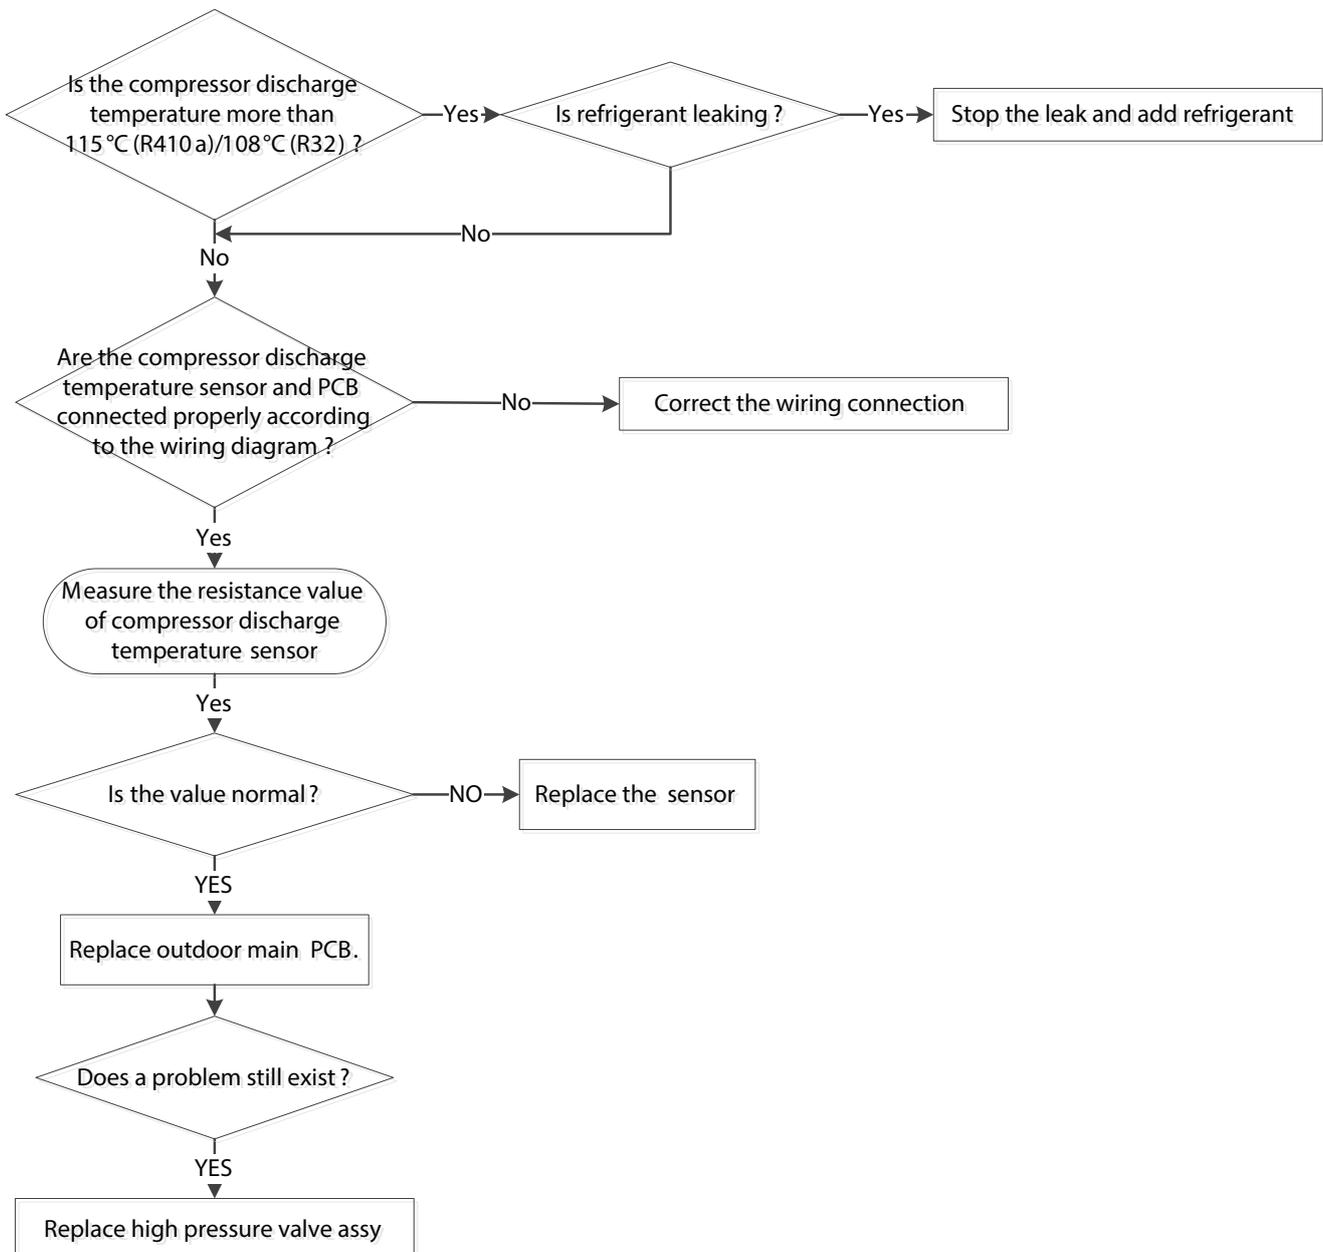

TS32: Discharge temperature protection of compressor diagnosis and solution

Description : If the compressor discharge temperature exceeds a certain level for nine seconds, the compressor ceases operation, the LED displays the failure code

Recommended parts to prepare:

- Connection wires
- Discharge temperature sensor
- Additional refrigerant
- Outdoor main PCB

Troubleshooting and repair:

Note: For certain models, outdoor unit uses combination sensor, T3, T4 and TP are the same of sensor. This picture and the value are only for reference, actual appearance and value may vary.

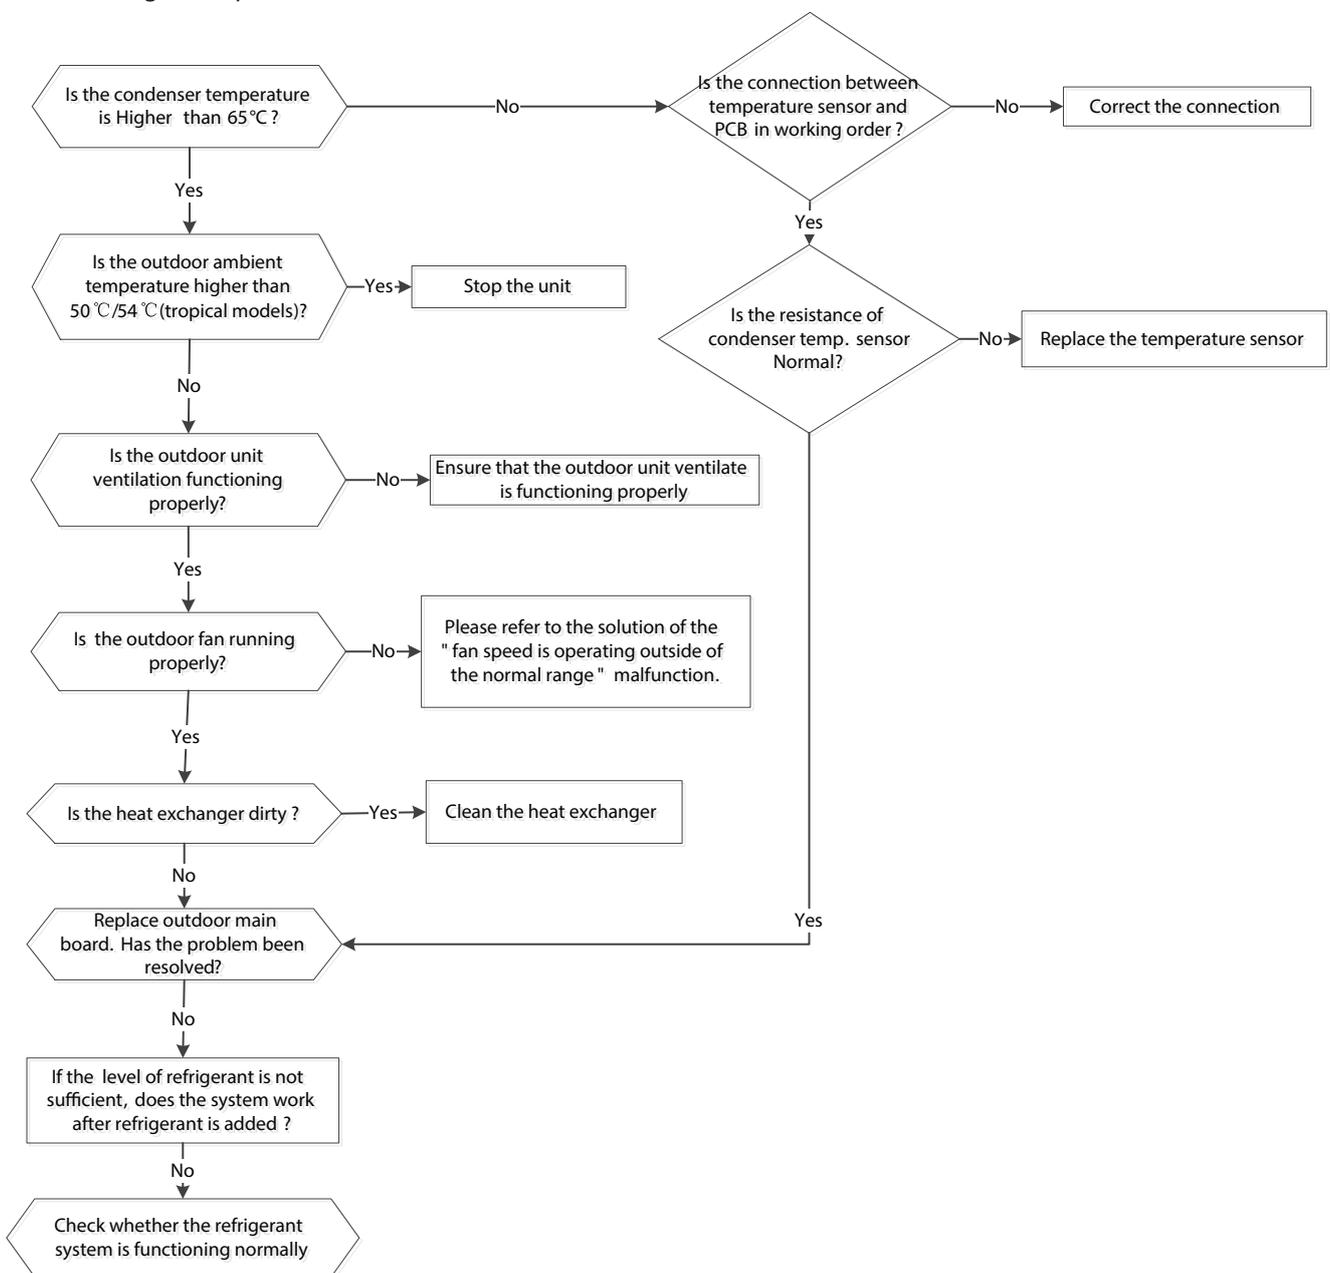

TS27-INV: High temperature protection of condenser diagnosis and solution

Description : When the outdoor pipe temperature is more than 65°C, the unit stops. It starts again only when the outdoor pipe temperature is less than 52°C.

Recommended parts to prepare:

- Connection wires
- Condenser temperature sensor
- Outdoor fan
- Outdoor main PCB
- Refrigerant

Troubleshooting and repair:

TS30: PFC module protection diagnosis and solution

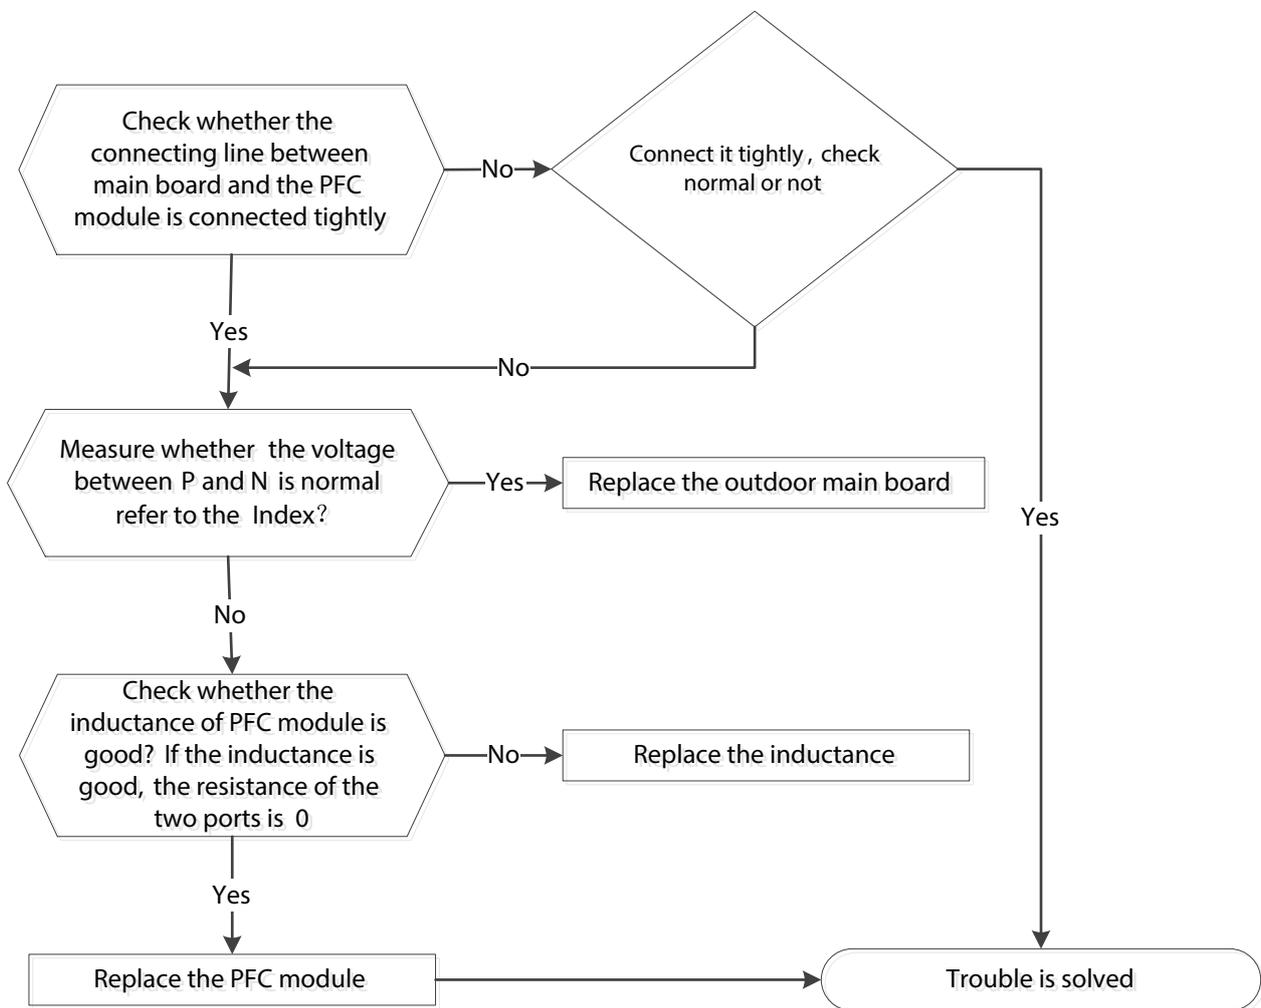

Description : When the voltage signal that IPM send to compressor drive chip is abnormal, the LED displays the failure code and the AC turns off.

Recommended parts to prepare:

- Connection wires
- Inductance
- Outdoor main PCB
- PFC module

Troubleshooting and repair:

At first test the resistance between every two ports of U, V, W of IPM and P, N. If any result of them is 0 or close to 0, the IPM is defective. Otherwise, please follow the procedure below:

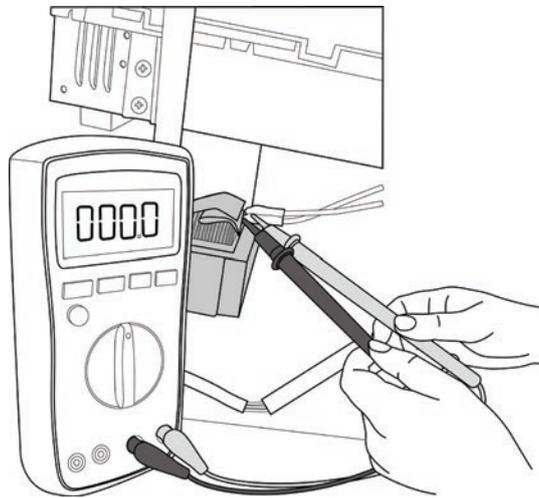

Index:

1. Normal voltage of P and N

208-240V(1-phase,3-phase)		380-415V(3-phase)	
In standby			
around 310VDC		around 530VDC	
In operation			
With passive PFC module	With partial active PFC module	With fully active PFC module	/
>200VDC	>310VDC	>370VDC	>450VDC

2. Reactor Check

Measure the resistance and voltage (to ground) of the reactor. The normal resistance should be around 0.1 ohm. Otherwise, the reactor must have malfunction.

Note: The picture and the value are only for reference, actual condition and specific value may vary.

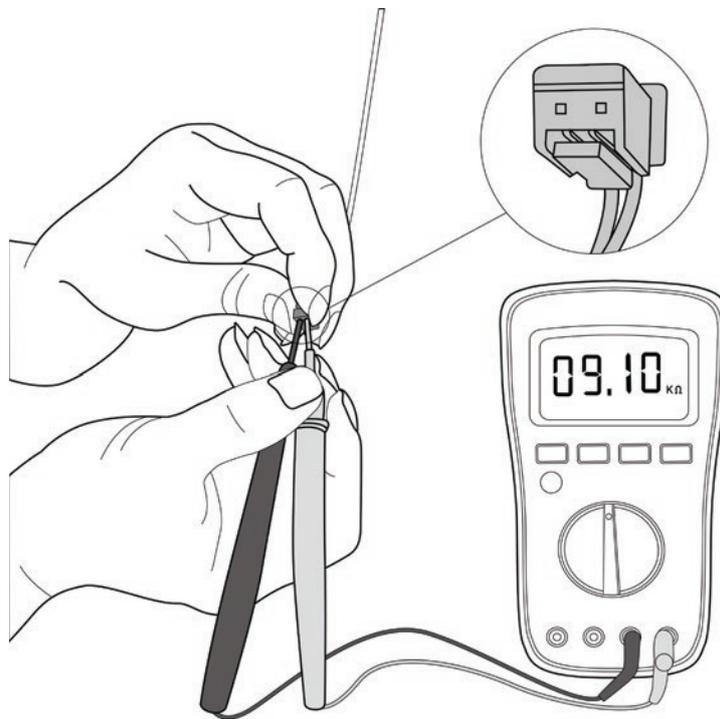

9. Check Procedures

9.1 Temperature Sensor Check

WARNING

Be sure to turn off all power supplies or disconnect all wires to avoid electric shock.
Operate after compressor and coil have returned to normal temperature in case of injury.

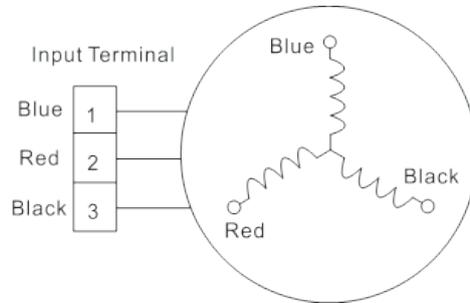

1. Disconnect the temperature sensor from PCB (Refer to Chapter 5&6. Indoor&Outdoor Unit Disassembly).
2. Measure the resistance value of the sensor using a multi-meter.
3. Check corresponding temperature sensor resistance value table (Refer to Chapter 8. Appendix).

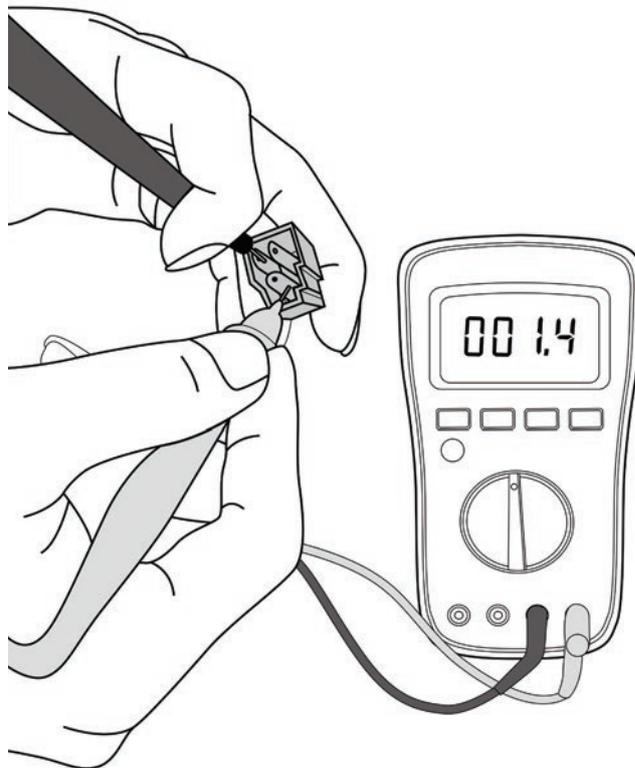

Note: The picture and the value are only for reference, actual condition and specific value may vary.

9.2 Compressor Check

1. Disconnect the compressor power cord from outdoor PCB (Refer to Chapter 6. Outdoor Unit Disassembly)).
2. Measure the resistance value of each winding using a multi-meter.
3. Check the resistance value of each winding in the following table.

Resistance Value	ATM150D23UFZ	ATF235D22UMT	ATF310D43UMT	ATQ360D1UMU
Blue-Red	1.72 Ω	0.75 Ω	0.65 Ω	0.37 Ω
Blue-Black				
Red-Black				

Note: The picture and the value are only for reference, actual condition and specific value may vary.

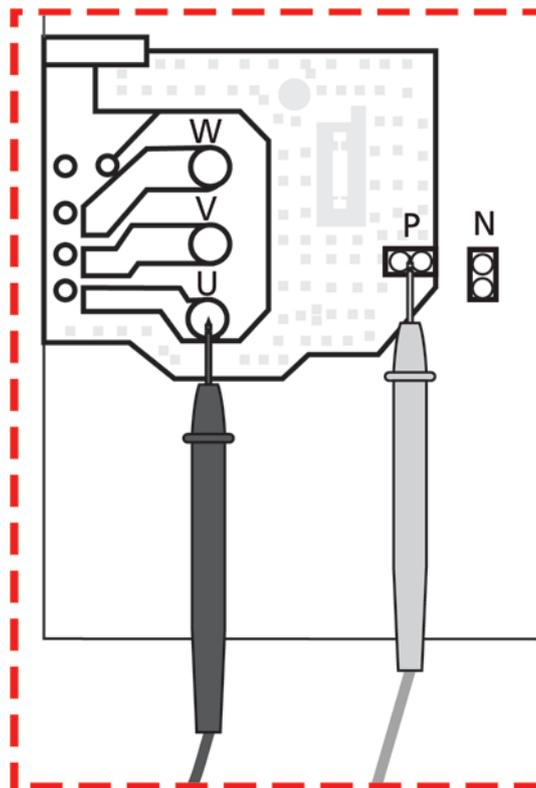

9.3 IPM Continuity Check

! WARNING

Electricity remains in capacitors even when the power supply is off.
Ensure the capacitors are fully discharged before troubleshooting.

1. Turn off outdoor unit and disconnect power supply.
2. Discharge electrolytic capacitors and ensure all energy-storage unit has been discharged.
3. Disassemble outdoor PCB or disassemble IPM board.
4. Measure the resistance value between P and U(V, W, N); U(V, W) and N.

Digital tester		Resistance value	Digital tester		Resistance value
(+)Red	(-)Black		(+)Red	(-)Black	
P	N	∞ (Several MΩ)	U	N	∞ (Several MΩ)
	U		V		
	V		W		
	W		-		

Note: The picture and the value are only for reference, actual condition and specific value may vary.
