

TRANSITION PERIMETER RACEWAY to Connectrac® Floor-Based Raceway Systems

Supply power and data to Connectrac Flex® and Express Kits with transitions from 2400D® Series or 4000® Series Raceway Systems.

Enhance your Connectrac on-floor raceway solutions with Legrand's perimeter transition options, offering installers greater flexibility in delivering power and data to Connectrac Flex or Express Kit systems.

With the 2400D or 4000 Series perimeter raceway solutions, installers can efficiently supply power and data to an interior space by seamlessly transitioning at the wall edge to Connectrac floor-based raceways.

The 4000 Series transition supports up to three channels when connecting to Flex Raceway, while the 2400 Series transition supports a single channel. Both single-channel transitions are also compatible with a single Express Kit run.

Compatible with Connectrac Flex & Express Kits

Each transition seamlessly integrates with both the Flex Raceway or Express Kit systems.

Supports Power, Data & AV

Transitions are designed to allow for separation of services to be maintained. 4000 Series supports up to three channels of Flex Raceway, supporting up to 28 CAT6 cables.

On-Floor & Under-Carpet Installation Options

Both perimeter fittings support transitions to on-floor and under-carpet installations of Connectrac raceways.

Modified Entrance Fitting for Flex Raceway

A specially designed entrance fitting is available for the transition to the Flex Raceway to allow for easy termination within the connection.

2400D SERIES AND 4000 SERIES TRANSITIONS FOR CONNECTRAC FLOOR-BASED RACEWAY SYSTEMS

	Connectrac Floor Raceway Systems & Compatible Raceway Transitions
