Irrigation Maintenance Service Descriptions

Winterization of Sprinkler.

Pacific Lawn Sprinklers will close down all water sources to the Irrigation system ONLY. We will open all drain valves and drain plugs, and set your control timer (s) to the 'REST' position. In addition, we will charge all main lines, valves, lateral lines and heads with compressed air.

Spring Start-Up Service.

Pacific Lawn Sprinklers will reseal all drain valves and meters. We will open the shut-off valves and slowly fill the mains and check for leaks and/or damage. We will check and adjust zones and heads for proper operation and coverage. Finally, we will reset the control timer (s) for the required settings and adjust the rain sensor for proper operation (if applicable).

Sprinkler Inspection.

Pacific Lawn Sprinklers will inspect and adjust all zones, sprinkler heads and/or drip lines for proper operation, coverage and efficiency. The entire system will be fine-tuned for shrub growth, grass heights and varying weather conditions. During the inspection, we will review the main lines, lateral lines, pumps, electric valves and valve boxes to look for any signs of water leaks. The automatic rain sensor will be checked for proper operation and the control timer(s) will be seasonally adjusted to maximize water efficiency.
