Contents

Foreword	VII
Contributors	XV
Preface	XVII
1 Extruder and Screw Design for Film Processing	1
<i>Mark A. Spalding and Gregory A. Campbell</i>	
1.1 The Extrusion Process	2
1.2 Rate Calculation	9
1.3 Gels	12
1.4 Troubleshooting Extrusion Processes	17
1.4.1 Improper Shutdown of Processing Equipment	18
1.4.2 Gel Showers in a Cast Film Process	19
1.4.3 Unmixed Gels	21
1.4.4 Carbon Specks in a Film Product	22
1.4.5 Rate Limitation Due to a Worn Screw	23
2 Kinematics, Dynamics, Crystallization, and Thermal Characteristics and Their Relationship to Physical Properties of Blown Film	27
<i>G. A. Campbell</i>	
2.1 Abstract	28
2.2 Introduction	29
2.3 Real-Time Crystallization of the Blown Film Process	30
2.4 Experiments	33
2.5 Process Data Analysis	34
2.6 SALS Image Analysis	37
2.7 Nucleation with High-Density Polyethylene	42
2.8 Experiments	43
2.9 Results	43
2.10 Temperature Measurement and Heat Transfer from the Blown Film Bubble	46
2.11 Measuring Film Emissivity and Film Thickness	48
2.12 Film Average Bulk Temperature and Surface Temperature	51
2.13 Experimental Evaluation of the Bubble Heat Transfer Coefficient	53

2.14	Results and Discussion	57
2.15	Correlating of MD and TD Properties of Blown Film	62
3	Multilayer Die Design and Film Structures	67
	<i>Karen Xiao and Martin Zatloukal</i>	
3.1	Background	68
3.1.1	Materials	70
3.1.2	Film Structures	71
3.1.3	Equipment Producers	72
3.2	Basic Coextrusion Film Die Types	73
3.2.1	Manufacturing Method	73
3.2.2	Cast Die Types	76
3.2.3	Blown Film Die Types	79
3.3	Interfacial Instabilities	85
3.3.1	Merging Area, Wave Type of Interfacial Instabilities, and the TNSD Sign Stability Criterion	87
3.3.1.1	The Effect of Die Design on the Wave Type of Interfacial Instabilities	93
3.3.1.2	The Role of Extensional Viscosities	94
3.3.2	Die Exit Region, Zigzag Interfacial Instabilities, and the Role of Polymer Processing Aids	96
3.3.3	Development of Interfacial Instabilities in Cast Film and Film Blowing of LDPEs	100
3.4	Flow Analysis for Flat Spiral Die	102
4	Die Flow Analysis and Mathematical Modeling of Film Blowing	111
	<i>J. Vlachopoulos and V. Sidiropoulos</i>	
4.1	Introduction	112
4.2	Die Flow Analysis	113
4.3	Computer-Aided Die Design	117
4.4	Modeling of Bubble Forming	119
4.5	Effect of Viscoelasticity	122
4.6	Modeling of Bubble Cooling	123
4.7	Bubble Collapsing	127
4.8	Critique on Flow Analysis and Bubble Modeling	128
4.9	Concluding Remarks	130
5	T-die Film Casting	133
	<i>Toshitaka Kanai</i>	
5.1	Introduction	134
5.2	Film Casting Process	135
5.3	Theoretical Analysis of Film Deformation under a Steady State	135
5.4	Deformation Behavior of T-die Casting	137

5.5	Draw Resonance	141
5.6	Film Breakage	143
5.7	Necking Phenomenon	144
5.8	Surface Roughness Caused by Shark Skin and Melt Fracture	147
5.9	Film Physical Properties	151
5.9.1	Influence of Process Conditions	151
5.9.2	Influence of Polymer Design	152
5.9.2.1	Branching and Properties of LLDPE	153
5.9.2.2	Impact Strength	153
5.9.2.3	Heat Seal Temperature	155
5.9.2.4	Blocking and Slippage	156
5.9.2.5	Transparency	157
5.9.2.6	Summary of Film Physical Properties	157
5.10	Bleeding of Additives in a Polypropylene Film	158
6	An Overview of Molten Polymer Drawing Instabilities	163
	<i>Jean-Francois Agassant and Yves Demay</i>	
6.1	Introduction	164
6.2	Experiments	165
6.3	Modeling Strategy: Constant Width Cast Film Process	171
6.4	Cast Film Process	174
6.4.1	Influence of Cooling	174
6.4.2	Influence of the Neck-In Phenomenon	175
6.4.3	Validity of the Membrane Model: 2-D Transverse Simulation	177
6.4.4	Influence of Rheology	180
6.5	Fiber Spinning	182
6.6	Film Blowing	183
6.7	Conclusions	187
7	Biaxial Oriented Film Technology	193
	<i>J. Breil</i>	
7.1	Introduction	194
7.2	Biaxial Oriented Film Lines	196
7.2.1	Sequential Film Lines	196
7.2.1.1	Extrusion	198
7.2.1.2	Casting Machine	201
7.2.1.3	Machine Direction Orienter (MDO)	203
7.2.1.4	Transverse Direction Orienter (TDO)	205
7.2.1.5	Pull Roll Stand	208
7.2.1.6	Winder	209
7.2.2	Simultaneous Stretching Lines	211
7.3	Process Control	217
7.4	Development Environment for Biaxial Oriented Films	222
7.5	Market for Biaxial Oriented Films	225

8	Biaxially Oriented Tentering Film	231
	<i>Toshitaka Kanai</i>	
8.1	Introduction	232
8.2	Tentering Process	232
8.3	Biaxially Oriented Tentering Machine	234
8.4	Theoretical and Experimental Analyses and Polymer Design for Biaxially Oriented Film	238
8.4.1	Cooling Process Analysis	239
8.4.2	Stretching Process Analysis	241
8.5	Visualization of Stretching Process	253
8.6	Film Physical Properties of Biaxially Oriented Film	257
8.7	Surface Roughness Control of Stretched Film	260
9	Structure Development in Uniaxial and Biaxial Film Stretching	263
	<i>T. Kikutani and W. Takarada</i>	
9.1	Introduction	264
9.2	Equipment for In Situ Measurement of Optical Retardation	265
9.3	In Situ Measurement during Batch-Type Film Stretching Experiments	267
9.3.1	Variation of In-Plane Birefringence during Uniaxial Stretching and Relaxation Processes	267
9.3.2	Three-Dimensional Analysis of Birefringence Development in Film Stretching	268
9.3.2.1	Uniaxial Elongation	268
9.3.2.2	Planar Elongation	269
9.3.2.3	Simultaneous Biaxial Elongation	270
9.3.3	Stress versus Birefringence Behavior	271
9.4	Analysis of Sequential Biaxial Elongation	273
9.4.1	Theoretical Prediction for Sequential Biaxial Elongation	273
9.4.2	Off-Line Analysis of Film Samples from the Sequential Biaxial Stretching Process	275
9.4.2.1	Birefringence	275
9.4.2.2	WAXD Analysis	278
9.5	Intrinsic Birefringence for Various Orientation Modes	281
9.6	Concluding Remarks	282
10	Double Bubble Tubular Film Extrusion	285
	<i>Toshitaka Kanai</i>	
10.1	Introduction	286
10.2	Double Bubble Tubular Machine	287
10.3	Theoretical Analysis of Double Bubble Tubular Film Process	287
10.3.1	Theoretical Analysis of Preheating Process and Stretching Process	287
10.3.2	Analysis of Stretching Stress	291
10.4	Bubble Deformation Behavior [16]	292

10.5	Film Properties	295
10.6	Comparison of Double Bubble Tubular Film (DBTF) and Laboratory Tenter Stretched Film (LTSF) [17]	296
10.6.1	Bubble Deformation Behavior and Stretching Stress	296
10.6.2	Comparison of LLDPE Film Properties of DBTF and LTSF	299
10.7	Material Design of Polyolefin for Double Bubble Tubular Film	301
10.7.1	Polyethylene [18]	302
10.7.2	Polypropylene [19]	304
10.8	Thickness Uniformity	305
10.9	High Performance Film Produced by Blend and Multilayer Stretching Process ...	307
10.10	Scale-Up Rule	308
10.11	Three Different Stretching Processes	311
10.12	Conclusions	311
11	Double Bubble Tubular Film Process and Its Application	315
	<i>Masao Takashige</i>	
11.1	Introduction	316
11.2	Physical Properties of Biaxial Oriented PA6 Film for Simultaneous Stretching and Sequential Processing	318
11.2.1	Stretching Process (Three Technical Methods)	318
11.2.2	Film Physical Properties	320
11.2.2.1	Impact Strength	320
11.2.2.2	Tensile Properties	321
11.2.2.3	Shrinkage Properties in Hot Water (Shrinkage Patterns)	322
11.2.2.4	Stress-Strain Curve Pattern	323
11.2.3	Wide-Angle X-ray Diffraction Pattern	326
11.2.4	Polarized Fluorescence	327
11.3	Easy-Tear Film of Biaxial Oriented PA6/MXD6 Blend by Double Bubble Tubular Film Process	328
11.3.1	Equipment and Materials	328
11.3.2	Blend Ratio (Dry Blending)	330
11.3.2.1	Stretchability	330
11.3.2.2	Physical Properties	331
11.3.2.3	Easy-Tearing Properties	333
11.3.2.4	Observation with TEM	336
11.3.2.5	Observation with SALS	338
11.3.2.6	Mechanism of Developed Property	339
11.3.2.7	Thickness Uniformity	339
11.3.3	Kneading Conditions (Premixing)	340
11.3.3.1	Stretchability (Melting Point of MXD6)	340
11.3.3.2	Physical Properties	342
11.3.3.3	Structure Analysis	343
11.4	Summary	344

12 Highly Transparent Polypropylene Sheets 349
Akira Funaki

12.1 Introduction 350

12.2 Influence of Screw Geometry on External Haze of Melted Web 351

 12.2.1 Preliminary Extrusion Tests Using Typical and Simple Geometry Screw 351

 12.2.2 Optimization of Screw Geometry 354

12.3 Influence of Shear Stress in Die on Internal Haze 355

12.4 Analysis of Contributing Factors to Production of Highly Transparent
 PP Extrusion Sheets 359

 12.4.1 Influence of Isotacticity on Transparency 360

 12.4.2 Influence of Molecular Weight Distribution on Transparency 365

 12.4.3 Influence of Addition of Metallocene Linear Low Density Polyethylene
 on Transparency 366

12.5 Conclusion 368
