Table of Contents

Preface	VII
Part 1	1
1 Principles of Aging	1
1.1 An Introduction to Polymers	4
1.1.1 Thermoplastics	4
1.1.2 Thermoplastic Elastomers	6
1.1.3 Elastomers	6
1.1.4 Thermosets	7
1.1.4.1 Epoxy Resins (EP Resins)	8
1.1.4.2 Phenolic Resins (PF Resin)	15
1.1.4.3 Unsaturated Polyesters (UP Resins)	19
1.1.4.4 Vinyl Ester Resin (VE Resin)	23
1.2 General Remarks, Definition of Terms	26
1.2.1 Definition of Aging	26
1.2.2 Additional Concepts	28
1.3 Short and Long-Term Behavior	29
1.3.1 Softening Behavior	29
1.3.2 Aging Behavior	30
1.3.3 Chemical Aging Processes (Chemical Degradation)	31
1.3.4 Physical Aging Processes and Physical Aging	32
1.3.4.1 Physical Aging Processes	32
1.3.4.2 Physical Aging	34
1.4 Influencing Factors	35
1.4.1 Effect of Temperature	37
1.4.1.1 Accelerative Effect of Temperature	37
1.4.1.2 Chemical Degradation	39
1.4.1.3 Physical Aging Processes	45
1.4.2 Effects of Oxygen	45
1.4.2.1 Chemical Degradation	46

1.4.2.2	Physical Aging Processes – Chemo-Crystallization	51
1.4.2.3	Effects of Ozone	52
1.4.3	Influence of Water	54
1.4.3.1	Chemical Degradation (Hydrolysis)	54
1.4.3.2	Physical Aging Processes	55
1.4.3.3	Mechanical Effects of Water	55
1.4.4	Influence of Mechanical Load	56
1.4.5	Influence of Chemical and Physical Structure	58
1.4.5.1	Influence of Chemical Structure	58
1.4.5.2	Influence of Physical Structure	60
1.4.6	Influence of Production Method, Catalyst Residue, and Metallic Contaminations	64
1.4.7	Additives	65
1.4.7.1	Glass Fibers	65
1.4.7.2	Fillers	66
1.4.7.3	Pigments	66
1.4.7.4	Influence of Chemical Purity	69
1.4.7.5	Flame Retardation Using Halogen Compounds	69
1.4.8	Effect of Radiation	69
1.4.8.1	Ultraviolet Radiation	69
1.4.8.2	Ionizing Radiation	72
1.4.9	Atmospheric Effects	72
1.4.9.1	UV Light	73
1.4.9.2	Temperature	73
1.4.9.3	Humidity, Water	75
1.4.9.4	Corrosive Gases	76
1.4.9.5	Solid Contaminations	79
1.4.9.6	Material History	79
1.4.10	Influence of Chemicals	80
1.4.10.1	Chemical Media Influence, Solvolysis	81
1.4.10.2	Physical Media Influence	81
1.4.11	Biological Influences	82
1.5	Influence of Processing and Application	82
1.5.1	Aging during Processing	84
1.5.2	Aging during Service	85
1.6	Service Life Prediction	88
1.6.1	Prerequisites for Service Life Predictions	89
1.6.1.1	Determining Influencing Factors	89
1.6.1.2	Characterizing Damage Condition	89
1.6.1.3	Range of Extrapolation	89
1.6.2	Models for Service Life Prediction	90
1.6.2.1	Phenomenological Description of Aging	90

1.6.2.2	Standardized Processes	92
1.6.2.3	Models for Changes in Properties with Time	92
1.6.2.4	Arrhenius Equation	94
1.6.2.5	Time-Temperature Shift	96
1.6.3	Dimensioning to Meet a Specific Service Life	104
1.6.3.1	Reduction Factors	104
1.6.3.2	Service Life for Technical Parts Under Mainly Static Loads	117
1.6.3.3	Service Life Under Dynamic Load	125
1.6.3.4	Service Life of Pipes	138
2	Testing Methods	139
2.1	General Remarks	143
2.1.1	Methods for Testing Service Life	143
2.1.1.1	Simulation of Actual Conditions	144
2.1.1.2	Accelerated Tests	144
2.1.1.3	Equivalence of Radiant Energy Effect	145
2.1.1.4	Parallel Aging	145
2.1.2	Aging Criteria	146
2.1.3	Measurement Methods	147
2.1.3.1	Appearance and Surface Properties	148
2.1.3.2	Mechanical Properties	151
2.1.3.3	Change in Chemical (Molecular) Structure	151
2.1.3.4	Measuring the Effectiveness of Antioxidants	154
2.1.3.5	Identification of Stabilizers and Their Concentration ...	159
2.1.3.6	Change in Physical Structure	159
2.1.3.7	Additional Methods	161
2.2	Weathering	161
2.2.1	Selecting a Testing Method	162
2.2.2	Influencing Factors	163
2.2.2.1	Specimen Color	163
2.2.2.2	Radiation	164
2.2.2.3	Temperature	167
2.2.2.4	Moisture	167
2.2.2.5	Climates	168
2.2.2.6	Boundary Layer Climates	169
2.2.2.7	Additional Influencing Factors in Weathering	171
2.2.3	Natural Weathering	172
2.2.3.1	Outdoor Weathering	172
2.2.3.2	Irradiation in Field Tests Under Window Glass	173
2.2.3.3	Others	174

- 2.2.4 Artificial Weathering 174
 - 2.2.4.1 Irradiation Sources 176
 - 2.2.4.2 Test Specifications 181
 - 2.2.4.3 Process Monitoring Equipment 184
- 2.2.5 Comparability of Outdoor Weathering and Artificial Weathering 185
- 2.2.6 Simulation of Acid Precipitation: ADF Test 187
- 2.2.7 Light Exposure and Weathering of Foam Materials 190
- 2.2.8 Weathering of Rubber 190
 - 2.2.8.1 Static Ozone Chamber Test 192
 - 2.2.8.2 Dynamic Ozone Chamber Test 192
- 2.3 Resistance to Ionizing Radiation 193
- 2.4 Thermal and Thermal Oxidative Resistance 194
 - 2.4.1 Short-Term Temperature Influence 194
 - 2.4.2 Long-Term Temperature Influence 194
 - 2.4.2.1 Selecting a Test Method 195
 - 2.4.2.2 Oven Aging 195
 - 2.4.2.3 Oxidative Induction Time and Temperature (OIT) 200
 - 2.4.2.4 Creep Rupture Tests 201
 - 2.4.2.5 Thermal-Oxidative Resistance of Elastomers 201
- 2.5 Chemical Resistance 204
 - 2.5.1 Definition of Chemical Resistance 204
 - 2.5.2 Field Tests and Experience 205
 - 2.5.3 Immersion Test 205
 - 2.5.4 Creep Rupture Tests 208
 - 2.5.5 Stress-Cracking Resistance 210
 - 2.5.5.1 Stress States in Component Parts 211
 - 2.5.5.2 Stress Cracking Resistance of Plastics
under Media Contact 214
- 2.6 Biological Resistance 222
 - 2.6.1 Testing Resistance to Microorganisms 222
 - 2.6.2 Compostability of Biodegradable Plastics 223
 - 2.6.2.1 Framing Standards for Product Requirements 224
 - 2.6.2.2 Standards Describing Testing Procedures 230
 - 2.6.3 Biocompatibility Tests 238
- 2.7 Standards, UL Cards 241
 - 2.7.1 Standards 241
 - 2.7.1.1 General Standards 241
 - 2.7.1.2 Weathering 244
 - 2.7.1.3 Ionizing Radiation 249
 - 2.7.1.4 Thermal and Thermal Oxidative Resistance 249

2.7.1.5	Chemical Resistance	251
2.7.1.6	Biological Resistance	253
2.7.2	Plastics Recognition Yellow Cards	255
2.8	Catalogue of Requirements	257
2.8.1	Apparatus, Containers, Pipes, Tanks	257
2.8.2	Building Construction	259
2.8.3	Electrical Engineering	261
2.8.3.1	Thermal Aging in Cables	261
2.8.3.2	Stress Cracking Resistance in Cables	261
2.8.4	Automotive	262
2.8.4.1	Loads on Vehicles	263
2.8.4.2	Tests for Weathering Resistance	266
2.8.4.3	Airbag Modules	267
2.8.4.4	PUR Semi-Rigid Foam	268
2.8.4.5	Graying Test	268
2.8.4.6	Environmental Simulation Tests for Fuel-Carrying Plastics Components	268
2.8.5	Medical Technology	271
2.8.6	Rubber and Plastic Hoses	271
3	Stabilization	273
3.1	Basic Principles	276
3.1.1	Market Development	276
3.1.2	Basic Principles of Stabilization	277
3.1.3	Influencing Factors	279
3.1.3.1	Fillers	279
3.1.3.2	Noxious Gases	279
3.1.3.3	Effect of Acids	279
3.2	Antioxidants	279
3.2.1	Primary Antioxidants (H Donors and Radical Interceptors)	280
3.2.1.1	Phenolic Antioxidants	281
3.2.1.2	Lactones	282
3.2.1.3	Sterically Hindered Amines (HAS)	283
3.2.1.4	Aromatic Amines	284
3.2.1.5	Hydroxylamines	284
3.2.2	Secondary Antioxidants (Hydroperoxide Decomposers)	284
3.2.2.1	Phosphites and Phosphonites	285
3.2.2.2	Thio Stabilizers	287
3.2.3	Bifunctional Stabilizers	287
3.2.4	Stabilizer Blends	287
3.3	Thermostabilizers, PVC Stabilizers	287

3.4	Light Stabilizers	288
3.4.1	UV Absorbers	288
3.4.2	Quenchers	290
3.4.3	Radical Scavengers and Hydroperoxide Decomposers	290
3.5	Bio-Stabilizers	292
3.6	Other Stabilizers	293
3.6.1	Lubricants	293
3.6.2	Other Additives	293
3.6.3	Metal Deactivators, Complexing Agents	294
3.6.4	Hydrolysis Stabilizers	294
3.7	Stabilization of Individual Polymers	294
3.7.1	Polyolefins	294
3.7.1.1	Thermal Oxidation	294
3.7.1.2	Light Protection	295
3.7.2	Styrene Polymers	296
3.7.2.1	Thermal Oxidation	296
3.7.2.2	Light Stabilization	296
3.7.3	Polycarbonate and Blends	297
3.7.3.1	Thermal Oxidation	297
3.7.3.2	Light Protection	298
3.7.3.3	Hydrolysis Stabilizers	299
3.7.4	Polymethyl Methacrylate	299
3.7.4.1	Thermal Oxidation	299
3.7.4.2	Light Protection	299
3.7.5	Polyvinyl Chloride	300
3.7.5.1	Thermal Degradation	300
3.7.5.2	Light Protection	304
3.7.6	Polyoxymethylene	305
3.7.6.1	End Group Stabilization	305
3.7.6.2	Integration of Comonomers	305
3.7.6.3	Stabilization against Thermal-Oxidative Degradation ...	306
3.7.6.4	Light Protection	306
3.7.7	Thermoplastic Polyester	307
3.7.7.1	Thermal Degradation during Processing	307
3.7.7.2	Thermal Oxidation	307
3.7.7.3	Thermal Oxidation of Polyethylene Terephthalate	307
3.7.7.4	Light Protection	308
3.7.7.5	Hydrolysis	308
3.7.8	Polyamides	308
3.7.8.1	Thermal Oxidation	308
3.7.8.2	Light Protection	312

3.7.8.3	Semi-Aromatic and Aromatic Polyamides	313
3.7.9	Cellulose and its Derivatives	313
3.7.9.1	Thermal Loading and Oxidation	313
3.7.9.2	Light Protection	314
3.7.10	Polyurethanes	314
3.7.10.1	Thermal Oxidation	314
3.7.10.2	Light Protection	314
3.7.10.3	Hydrolysis	315
3.7.11	Thermoplastic Polyurethanes	315
3.7.12	Tetrafluoroethylene-Ethylene Copolymer	315
3.7.13	High-Temperature Thermoplastics	315
3.7.13.1	Polyarylate	316
3.7.13.2	Polyphenylene Ether and Blends	316
3.7.13.3	Polyphenylene Sulfide	316
3.7.14	Thermosets	318
3.7.14.1	Storage Stability Prior to Processing	319
3.7.14.2	Molding Materials: Curing	320
3.7.14.3	Molding Materials: Structural Aspects	321
3.7.14.4	Design Aspects	325
3.7.15	Elastomers	326
3.7.15.1	Thermal Oxidation	326
3.7.15.2	Light Protection	327
3.8	Stabilization of Recycled Materials	327
4	Processing	329
4.1	Processing Influencing Service Properties	332
4.1.1	Influencing Parameters	334
4.1.1.1	Processing Parameters	334
4.1.1.2	Process Steps	340
4.1.1.3	Plastics Composition	343
4.1.1.4	Influence of Metallic Contaminations	348
4.1.1.5	Influence of Catalyst Residues	348
4.1.1.6	Influence of the Atmosphere	348
4.1.2	Processing Thermoplastics	349
4.1.2.1	Manufacturing Molding Compounds	349
4.1.2.2	Extrusion	352
4.1.2.3	Injection Molding	359
4.1.2.4	Forming Processes	361
4.1.2.5	Cast Molding	361
4.2	Recycling	362

- 4.3 Behavior of Individual Polymers 364
 - 4.3.1 Polyolefins 364
 - 4.3.1.1 Influence of Manufacturing Processes and Catalysts ... 364
 - 4.3.1.2 Polyethylene 366
 - 4.3.1.3 Polypropylene 368
 - 4.3.2 Styrene Copolymers 372
 - 4.3.2.1 Polystyrene 372
 - 4.3.2.2 ABS 374
 - 4.3.3 Polycarbonate 376
 - 4.3.4 Polymethyl Methacrylate 377
 - 4.3.4.1 Thermal Stability of PMMA 377
 - 4.3.5 Polyvinyl Chloride 378
 - 4.3.6 Polyoxymethylene 380
 - 4.3.7 Thermoplastic Polyester 382
 - 4.3.7.1 Polybutylene Terephthalate 382
 - 4.3.7.2 Polyethylene Terephthalate 382
 - 4.3.8 Polyamides 384
 - 4.3.8.1 Polyamide 6 and Polyamide 66 385
 - 4.3.8.2 Polyamide 46 387
 - 4.3.8.3 Polyamide 11 and 12 387
 - 4.3.8.4 Fiber Manufacture 388
 - 4.3.9 Fluoropolymers 388
 - 4.3.9.1 Polytetrafluoroethylene 388
 - 4.3.9.2 Polytrifluorochloroethylene 389
 - 4.3.9.3 Polyvinylidene Fluoride 389
 - 4.3.9.4 Polyvinyl Fluoride 389
 - 4.3.10 High-Temperature Thermoplastics 389
 - 4.3.10.1 Polyphenylene Sulfide 389
 - 4.3.10.2 Other High-Temperature Thermoplastics 391
 - 4.3.11 Polyurethane 391
 - 4.3.12 Thermosets 392
 - 4.3.12.1 Processing Thermosets 392
 - 4.3.12.2 Curing of Thermosets 393
 - 4.3.12.3 Influence of Fiber Reinforcement 408
 - 4.3.12.4 Polyester Resins 419
 - 4.3.12.5 Epoxy Resins 421
 - 4.3.12.6 Condensation Resins 421

5 Applications	423
5.1 Material Selection Based on Service Life	435
5.2 Resistance to Atmospheric Influences	441
5.2.1 Determining Factors	441
5.2.1.1 Influence of Light: Light-Induced Degradation	441
5.2.1.2 Influence of Humidity and Moisture	445
5.2.2 Weathering Resistance in Individual Polymers	446
5.2.2.1 Polyolefins	446
5.2.2.2 Polymerized Styrenes	459
5.2.2.3 Polycarbonate and Blends	469
5.2.2.4 Polymethyl Methacrylate	479
5.2.2.5 Polyvinyl Chloride	487
5.2.2.6 Polyoxymethylene	499
5.2.2.7 Thermoplastic Polyester	503
5.2.2.8 Polyamides	506
5.2.2.9 Cellulose and Derivatives	510
5.2.2.10 Fluoropolymers	511
5.2.2.11 High-Temperature Thermoplastics	512
5.2.2.12 Thermoplastic Elastomers	516
5.2.2.13 Elastomers	519
5.2.2.14 Polyurethane	529
5.2.2.15 Thermosets	534
5.3 Resistance to Ionizing Radiation	537
5.3.1 Basic Principles	537
5.3.2 Mechanisms	542
5.3.2.1 Radiation Curing	543
5.3.2.2 Degradation	545
5.3.3 Influencing Factors	546
5.3.3.1 Influence of the Irradiation Source	546
5.3.3.2 Influence of the Dose Rate	547
5.3.3.3 Influence of Atmosphere	548
5.3.3.4 Influence of Temperature	550
5.3.3.5 Influence of Fillers	550
5.3.3.6 Influence of Stabilizers	550
5.3.4 Applying Radiation Technology to Plastics	551
5.3.4.1 Targeted Crosslinking in Plastics	551
5.3.4.2 Sterilizing Plastics	552
5.3.5 Stabilization and Sensibilization	552
5.3.5.1 Stabilization	552
5.3.5.2 Sensibilization	553
5.3.6 Resistance to Ionizing Radiation	553

5.3.7	Behavior of Individual Polymers under Ionizing Radiation	557
5.3.7.1	Polyolefins	557
5.3.7.2	Styrene Polymers	562
5.3.7.3	Polycarbonate	564
5.3.7.4	Polymethyl Methacrylate	565
5.3.7.5	Polyvinyl Chloride	566
5.3.7.6	Polyvinyl Alcohol	568
5.3.7.7	Polyoxymethylene	569
5.3.7.8	Thermoplastic Polyester	570
5.3.7.9	Polyamide	571
5.3.7.10	Cellulose and Its Derivatives	575
5.3.7.11	High-Temperature Thermoplastics	576
5.3.7.12	Thermoplastic Polyurethane	578
5.3.7.13	Elastomers	578
5.3.8	Resistance to Laser Radiation	580
5.3.9	Radiation in the Earth's Lower Orbit	580
5.4	Thermal and Thermal-Oxidative Degradation	581
5.4.1	Continuous Operating Temperature Based on Empirical Data . . .	581
5.4.2	Explanation of Concepts	583
5.4.2.1	Differentiating Thermal and Thermal-Oxidative Degradation	583
5.4.2.2	Annealing	585
5.4.3	Behavior of Individual Polymers	586
5.4.3.1	Polyolefins	586
5.4.3.2	Styrene Polymers	594
5.4.3.3	Polycarbonate and Blends	602
5.4.3.4	Polymethyl Methacrylate	612
5.4.3.5	Polyvinyl Chloride	615
5.4.3.6	Polyoxymethylene	616
5.4.3.7	Thermoplastic Polyester	619
5.4.3.8	Polyamide	628
5.4.3.9	Cellulose and its Derivatives	645
5.4.3.10	Fluoropolymers	646
5.4.3.11	High-Temperature Thermoplastics	648
5.4.3.12	Thermoplastic Elastomers	653
5.4.3.13	Elastomers	661
5.4.3.14	Polyurethanes	668
5.4.3.15	Thermosets	669
5.4.3.16	Siloxanes	675
5.4.4	Short-Term Peak Temperature Loads	676

5.5	Resistance to Chemical Attack	679
5.5.1	Diffusion Processes during Chemical Attack	680
5.5.1.1	Interaction and Transport Mechanisms	680
5.5.1.2	Water Absorption	682
5.5.2	Influencing Factors	683
5.5.2.1	Plastics	683
5.5.2.2	Effective Media	683
5.5.2.3	Temperature	685
5.5.2.4	Residence Time	685
5.5.2.5	Concentration	685
5.5.2.6	Material Specific Factors	685
5.5.3	Physically and Chemically Active Media	686
5.5.3.1	Physically Active Medium	687
5.5.3.2	Chemical Reactions – Chemically Active Medium	691
5.5.4	Resistance to Stress Cracking	692
5.5.5	Hydrolysis	693
5.5.6	Creep Behavior	693
5.5.6.1	Influence of Temperature	695
5.5.6.2	Influence of Ambient Conditions	696
5.5.6.3	Influence of the Medium	696
5.5.6.4	Influence of the Material	697
5.5.6.5	Influence of Processing	698
5.5.6.6	Influence of Stabilizers	698
5.5.7	Ways of Improving Chemical Resistance	701
5.5.8	Resistance of Reinforcing Fibers	702
5.5.8.1	Glass Fibers	702
5.5.8.2	Carbon Fibers	707
5.5.8.3	Aramid Fibers	708
5.5.8.4	Chemical Resistance of Glass Fiber Reinforced Plastics	709
5.5.9	Behavior of Individual Polymers	714
5.5.9.1	Polyolefins	714
5.5.9.2	Styrene Polymers	727
5.5.9.3	Polycarbonate and Blends	736
5.5.9.4	Polymethyl Methacrylate	743
5.5.9.5	Polyvinyl Chloride	744
5.5.9.6	Polyoxymethylene	748
5.5.9.7	Thermoplastic Polyester	753
5.5.9.8	Polyamides	758
5.5.9.9	Cellulose and its Derivatives	779
5.5.9.10	Fluoropolymers	780
5.5.9.11	High-Temperature Thermoplastics	782

5.5.9.12	Thermoplastic Elastomers	793
5.5.9.13	Elastomers	798
5.5.9.14	Polyurethane	810
5.5.9.15	Thermosets	814
5.6	Biological Resistance and Biodegradability	833
5.6.1	Main Principles	833
5.6.1.1	Micro- and Macrobiological Damage, Biological Degradation	833
5.6.1.2	Influencing Factors	841
5.6.1.3	Protecting Plastics Against Attack by Microorganisms ..	846
5.6.2	Biodegradable Plastics	846
5.6.2.1	Degradable Petroleum-Based Biopolymers	848
5.6.2.2	Degradable Bio-Based Biopolymers	849
5.6.2.3	Non-Degradable Bio-Based Biopolymers	849
5.6.2.4	Blends and Copolymers from Various Groups of Raw and Manufactured Materials	849
5.6.2.5	Biodegradability and Compostability	850
5.6.2.6	Oxo-Degradability	851
5.6.3	Biocompatibility and Biomedical Applications	852
5.6.3.1	Use of Biodegradable Plastics in Medical Technology ...	856
5.6.3.2	Sterilization	856
5.6.3.3	Catalysts in Biological Media	859
5.6.4	Resistance of Individual Polymers to Biological Media	861
5.6.4.1	Polyethylene	861
5.6.4.2	Polypropylene	864
5.6.4.3	Styrene Polymers	866
5.6.4.4	Polyoxymethylene	866
5.6.4.5	Polyvinyl Chloride	866
5.6.4.6	Vinyl Chloride-Vinyl Acetate Copolymers	871
5.6.4.7	Polymethyl Methacrylate	871
5.6.4.8	Polyvinyl Alcohol	871
5.6.4.9	Polycarbonate	871
5.6.4.10	Cellulose and its Derivatives	871
5.6.4.11	Polyamide	873
5.6.4.12	Polyester	873
5.6.4.13	Polyurethanes and Thermoplastic Polyurethanes	881
5.6.4.14	Polyurethane Urea	882
5.6.4.15	Fluoropolymers	882
5.6.4.16	Polyether Ether Ketone	883
5.6.4.17	Polysiloxane	883
5.6.4.18	Elastomers	883
5.6.4.19	Thermosets	884

6 Mechanical Behavior of Fiber Reinforced Plastics	885
6.1 Long-Term Mechanical Behavior of Fiber Reinforced Plastics	886
6.1.1 Creep	886
6.2 Creep Strength	888
6.2.1 Description	888
6.2.2 Unidirectional Fiber Composite Profiles	890
6.2.3 Laminates	893
6.2.4 Miner's Rule	895
6.3 Cyclic Load	898
6.4 Concept of Creep and Fatigue Life Prediction for Polymer Composites ..	899
6.4.1 Master Curve of CSR Strength	901
6.4.2 Master Curve of Creep Strength	902
6.4.3 Master Curve of Fatigue Strength for Zero Stress Ratio	903
6.4.4 Prediction of Fatigue Strength for Arbitrary Frequency, Stress Ratio, and Temperature	906
6.4.5 Tensile and Flexural Static Strength	908
6.4.6 Creep Strength	909
6.4.7 Fatigue Strength for Zero Stress Ratio	910
6.4.8 Fatigue Strength for Arbitrary Stress Ratio	913
 Part 2	 915
 Plastics, Rubbers and Their Acronyms	 915
 Other Abbreviations	 919
 Tables of Chemical Resistance	 923
A.1 Polyolefins	923
A.1.1 Resistance Factors of Polyolefin Pipes	923
A.1.2 Tables of Chemical Resistance for Polyolefins	928
A.1.3 List of Exposure Media (as Established by the German Institute for Civil Engineering, DIBt)	1004
A.1.3.1 Preliminary Remarks	1004
A.1.3.2 List of Exposure Media for Polyolefins	1005
A.2 Styrene Polymers	1018
A.2.1 Chemical Resistance of Styrene Polymers	1018
A.2.2 Media Causing Stress Cracking in Styrene Polymers	1044

A.3 Polycarbonate and Polymethyl Methacrylate 1045

 A.3.1 Chemical Resistance of Polycarbonate 1045

 A.3.2 Polymethyl Methacrylate 1056

 A.3.2.1 Chemical Resistance 1056

 A.3.2.2 Stress Cracking Resistance 1068

A.4 Thermoplastic Polyester 1069

A.5 Polyoxymethylene 1083

A.6 Polyamides 1097

 A.6.1 Chemical Resistance for PA 6 and PA 66 1097

 A.6.2 Chemical Resistance of Polyamide 46, 610, and 612 1116

 A.6.3 Chemical Resistance for Other Polyamides 1119

A.7 Cellulose and Derivates 1133

A.8 Polyvinyl Chloride 1135

 A.8.1 Resistance Factors for PVC Pipes 1135

 A.8.2 Chemical Resistance of PVC 1138

 A.8.3 List of Exposure Media for PVC Provided by the German
 Institute for Construction Technology 1188

A.9 Polyphenylene Sulfide (PPS) 1194

A.10 Polyetherimide (PEI) 1198

A.11 Polyimide (PI), Polyamide Imide (PAI), Polyphenylene Ether (PPE),
 Polyether Ether Ketone (PEEK) 1200

A.12 Polyethersulfone (PES) and Polysulfone (PSF) 1206

A.13 Fluoropolymers 1213

 A.13.1 Chemical Resistance of Fluoropolymers 1213

 A.13.2 Chemical Resistance of PTFE 1221

 A.13.3 Chemical Resistance of PVDF 1227

 A.13.4 List of Exposure Media for PVDF (Provided by DIBt) 1248

A.14 Liquid Crystalline Polymers (LCP) 1255

A.15 Polyurethanes 1262

 A.15.1 Polyurethanes 1262

 A.15.2 Thermoplastic Polyurethanes (TPU) 1268

 A.15.2.1 Swelling Behavior of TPU in Various Solvents 1268

 A.15.2.2 Chemical Resistance of TPU 1269

A.16 Elastomers 1272

 A.16.1 Chemical Resistance of Materials for Tubes and Hoses 1272

 A.16.2 Chemical Resistance of Elastomers 1283

A.17 Thermosets 1306

 A.17.1 Chemical Resistance of Thermosets 1306

 A.17.2 List of Exposure Media for Chemical Barrier Layers Provided
 by the DIBt 1319

 A.17.2.1 Preliminary Remarks Regarding Immersion Media
 in Lists 40-2.1.1 to 40-2.1.3 1319

 A.17.2.2 List of Exposure Media 40-20.1.1 1320

 A.17.2.3 List of Exposure Media 40-20.1.2 1324

 A.17.2.4 List of Exposure Media 40-20.1.3 1327

 A.17.2.5 Lists of Exposure Media 40-3.2 and 40-3.4:
 Glass Fiber Reinforced Laminates with Thermoplastic
 Coating of PP and PVC-U 1335

A.18 Chemical Resistance in CAMPUS 1341
