RD Motoreductores de vis sin fin

RD Series worm geared motors

Breve introducción

Brief introduction

Los reductores de vis sin fin de la serie RD han sido desarrollados por nuestra compañía con el compromiso de satisfacer las exigencias de nuestros clientes, están compuestos por un vis de acero templado y rectificado y una corona fabricada con una aleación de bronce.

La serie está compuesta por 9 tamaños con relaciones de reducción comprendidas entre 1:7.5 a 1:100. se fabrican con carcasa de aluminio todos los modelos desde el tamaño 025 al 090 y en fundición de hierro las carcasas de los modelos 110 y 130.

Esta serie está complementada por 4 tamaños de pre-reducciones PR de un tren de engranajes helicoidales, y todos los accesorios para reductores: bridás de salida, ejes de salida simples y dobles, brazos de reacción y kits de combinación para motoreductores combinados

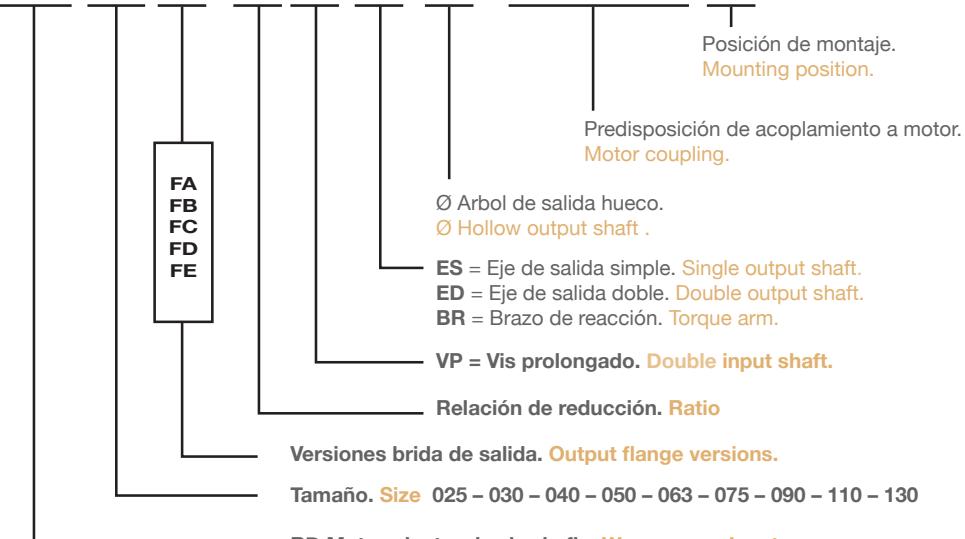

Worm gearbox series RD has been developed by our company with the commitment to meet the requirements of our customers. They are composed for a vis hardened and ground steel and a wheel made of a bronze alloy.

The RD series are composed for 9 sizes with ratios from 1:7.5 up to 1:100, are manufactured in die-cast aluminium frame from 025 to 090 size and in cast iron sizes 110 and 130.

This serie is complemented with 4 sizes of pre-stage helical units PR, and all the accessories for gearboxes: output flanges, single and double output shaft, torque arms and combination kits for combined worm geared motors

Designación / Designation

RD 063 FA – 30 DV ES Ø25 PAM80B14 B3

Posición de montaje.
Mounting position.

Predisposición de acoplamiento a motor.
Motor coupling.

Ø Arbol de salida hueco.
Ø Hollow output shaft .

ES = Eje de salida simple. Single output shaft.
ED = Eje de salida doble. Double output shaft.
BR = Brazo de reacción. Torque arm.

VP = Vis prolongado. Double input shaft.

Relación de reducción. Ratio

Versiones brida de salida. Output flange versions.

Tamaño. Size 025 – 030 – 040 – 050 – 063 – 075 – 090 – 110 – 130

RD Motoreductor de vis sin fin. Worm geared motor.
IRD Reductor de vis sin fin con eje de entrada. Worm gearbox with input shaft.

Instrucciones de montaje y mantenimiento

Operation & Maintenance

Durante la instalación deben respetarse las siguientes instrucciones

- Asegurar una alineación correcta entre motor y reductor y entre el reductor y la máquina.
- Instalar el reductor de manera que no sufra vibraciones.
- Observar que los componentes a instalar sobre los ejes cumplan las tolerancias correctas sin correr el riesgo de dañar los rodamientos o las partes externas del reductor.
- Si se prevén sobrecargas, golpes o bloqueos durante el funcionamiento hay que prever la instalación de acoplamientos de seguridad.
- Si se aplican pinturas sobre el reductor se debe proteger el borde exterior de los retenes para evitar que el caucho se deteriore y cause pérdidas de lubricante.
- Pulir completamente la superficie donde se debe fijar el reductor y tratar con sustancias protectoras las partes metálicas en contacto antes del montaje para evitar oxidaciones y bloqueos.
- Verificar en el momento de la puesta en funcionamiento que las partes eléctricas llevan las protecciones necesarias.
- Verificar que la tensión de alimentación indicada en las placas de los motores sea la correcta.

Durante el funcionamiento

- Los reductores son llenados con lubricante semi-sintético y no requieren ningún tipo de mantenimiento.
- Debe verificarse la cantidad de aceite necesaria en función de las posiciones de montaje indicadas en las tablas.
- En caso de temperaturas ambiente inferiores a -20°C o superiores a 40°C rogamos ponerse en contacto con nuestro departamento técnico.
- Durante la fase de rodaje la temperatura del reductor puede ser un poco más elevada de lo normal.

During the installation, the following instructions must be followed:

- Ensure correct alignment between the motor and the gearbox and between the gearbox and the machine.
- Mount the gearbox so that it is not subject to vibrations while operating.
- Note that the components to be installed on the shafts meet the correct tolerances, to avoid the risk of damages or the outer parts of the gearbox.
- If overloads, shocks, or blocking are expected, safety couplings must be fitted.
- If paint is applied on the gearbox, the outer edges of the oil seals must be protected to prevent the rubber from deterioration and causing oil leaks.
- Clean the surfaces where the gearbox should be fixed and treat with suitable protective substances before assembly to prevent oxidation.
- Check at starting up, that the electrical parts have the necessary protections.
- Check that the information shown in the plate of the motor is correct.

During operation

- The gearboxes are filled with semi-synthetic oil and do not require any maintenance.
- The oil quantity required must be checked depending on the mounting position indicated in the tables.
- If ambient temperatures below -20°C or above 40°C please contact our technical department.
- During the early stages of service the gearbox temperature may be slightly higher than usual.

Cargas radiales y axiales

Radial and axial loads

Cuando la transmisión del movimiento pueda provocar cargas radiales o axiales en el extremo de los ejes, se debe verificar que estas nunca superen en las condiciones más desfavorables a los máximos permitidos. En la siguiente tabla se indican los valores de las cargas radiales admisibles para los ejes de entrada Fr1. La carga axial se obtiene: $Fa1 = 0.2 \times Fr1$

Transmission movement can produce radial or axial loads on shaft ends, it is necessary to be sure that resulting values, in most unfavourable conditions, do not exceed the maximum allowed values.

In following table, permissible radial loads Fr1 for input shaft are listed. The permissible axial load is obtained as follows: $Fa1 = 0.2 \times Fr1$

| nv Rpm | Fr1 (daN) | | | | | | | |
|-----------|-----------|-----|-----|-----|-----|-----|-----|-----|
| | RD - IRD | | | | | | | |
| | 030 | 040 | 050 | 063 | 075 | 090 | 110 | 130 |
| 1400 | 6 | 22 | 32 | 42 | 50 | 70 | 100 | 160 |
| 900 | 6 | 25 | 35 | 46 | 53 | 80 | 120 | 180 |
| 700 | 7 | 28 | 40 | 50 | 57 | 90 | 130 | 200 |
| 500 | 7 | 31 | 45 | 53 | 60 | 100 | 145 | 220 |

En la siguiente tabla se indican los valores de las cargas radiales admisibles en el eje de salida Fr2. La carga axial admisible se obtiene: $Fa2 = 0.2 \times Fr2$

Admissible radial loads Fr2 for output shaft are listed in the next table. The permissible radial load is obtained as follows: $Fa2 = 0.2 \times Fr2$.

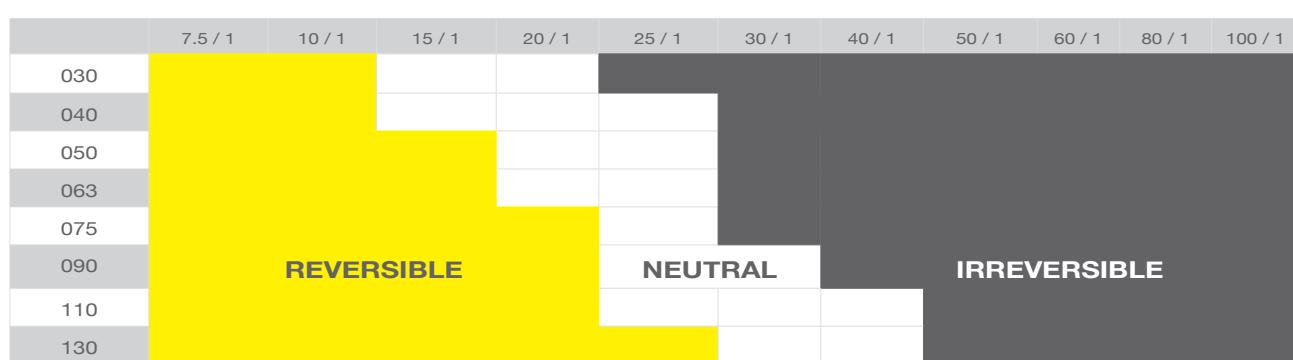

| nl Rpm | Fr2 (daN) | | | | | | | |
|-----------|-----------|-----|-----|-----|-----|-----|-----|------|
| | SF - RD | | | | | | | |
| | 030 | 040 | 050 | 063 | 075 | 090 | 110 | 130 |
| 187 | 65 | 128 | 177 | 233 | 275 | 305 | 386 | 506 |
| 140 | 73 | 141 | 195 | 256 | 301 | 336 | 424 | 556 |
| 94 | 84 | 162 | 224 | 295 | 346 | 384 | 486 | 638 |
| 70 | 91 | 178 | 247 | 325 | 383 | 424 | 536 | 702 |
| 56 | 100 | 194 | 266 | 349 | 414 | 456 | 577 | 756 |
| 47 | 105 | 205 | 284 | 370 | 439 | 486 | 614 | 804 |
| 35 | 115 | 225 | 313 | 408 | 484 | 534 | 677 | 885 |
| 28 | 125 | 244 | 336 | 441 | 520 | 576 | 729 | 954 |
| 24 | 134 | 259 | 357 | 467 | 554 | 612 | 774 | 1015 |
| 18 | 146 | 286 | 394 | 515 | 610 | 674 | 853 | 1117 |
| 14 | | 308 | 425 | 555 | 656 | 727 | 920 | 1202 |

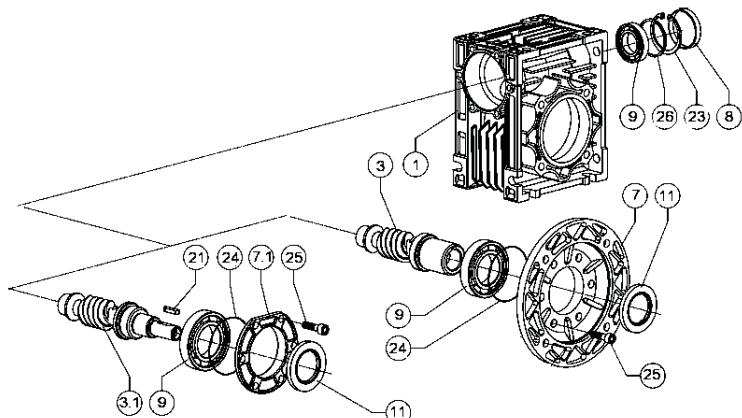

* Los valores indicados se refieren a las cargas situadas en el centro de los ejes.

* Values shown in the tables are related at loads in the shafts center line.

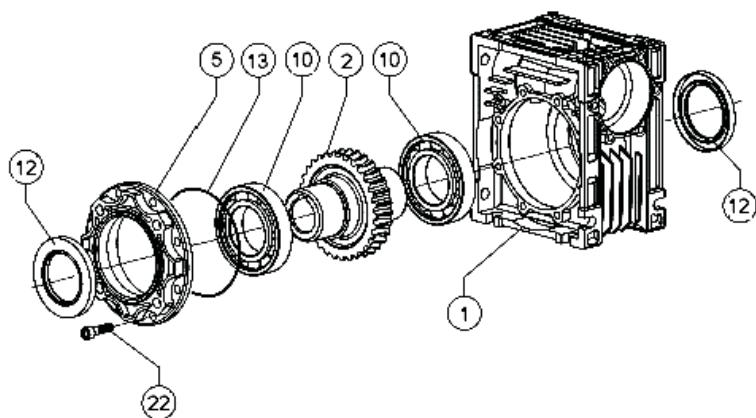

Una de las características de algunos reductores de vis sin fin es la irreversibilidad, es decir que no pueden ser accionados desde el eje de salida. A modo orientativo se muestra la siguiente tabla.

Irreversibility is a characteristic of some worm gear reducers, it can not be operated from the output shaft. For orientation purposes, see the following table.

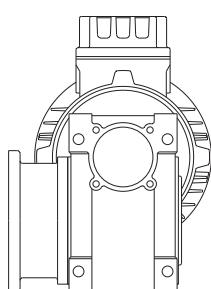

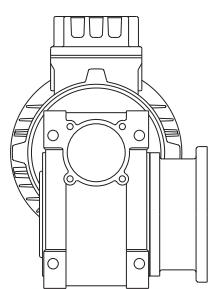

| Nº | Pieza | Part |
|-----|------------------|--------------------|
| 1 | Carcasa | Frame |
