SAFETY WARNING

The connection and installation of electrical devices must be performed by a skilled electrician only. Any intervention into or modification of the appliance shall lead to the lapse of all warranty rights. Comply with your national regulations and all relevant safety stipulations.

Assemble the cover and secure to the base. For the first installation ensure that the larger part of the cover is used on the incoming, power supply side. A safety screw is provided which allows a wire / security deal to be installed.

When installing the security seal, feed the wire through the head of the screw and the boss on the cover.

Use fixing screws to secure the base to the surface, the switch can be removed by pulling back the black clips on the bottom edge of the Main Switch. Note: - fixing screws not provided.

Prepare the incoming supply cable, a maximum diameter of 35mm² can be accepted by the terminals in the Main Switch.

Insert the cables into the terminals on the bottom edge of the Main Switch. Ensure that they are fully inserted and the screws tightened to 2.5Nm of torque.
