Features & Care instructions

WOOD

The wooden boards comply with the applicable hygiene regulations and are food safe. Not suitable for dishwashers.

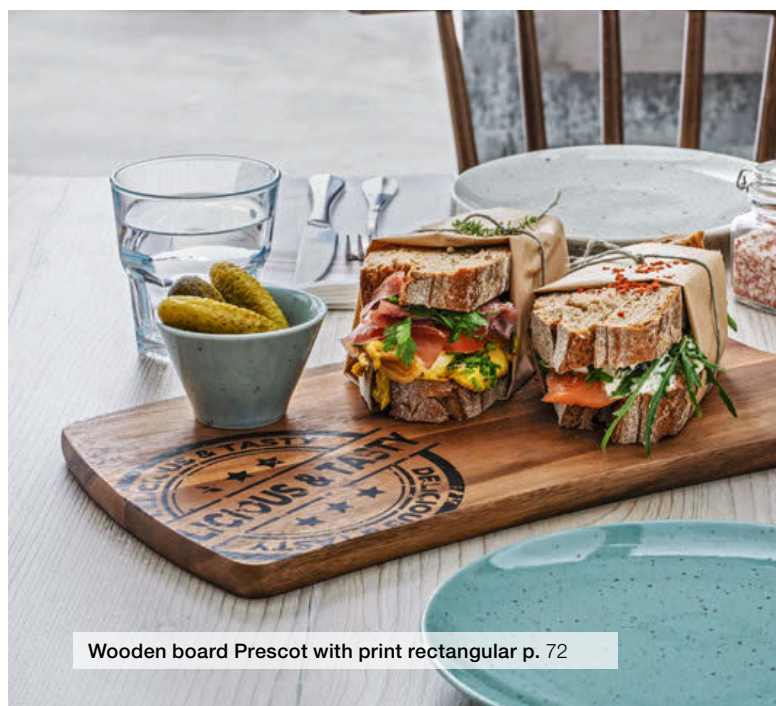

NATURAL SLATE

Platters made of natural slate are suitable for all types of food presentation.

- Insensitive in contact with hot or cold surfaces
- Food safe
- Versatile: Suitable for refrigerator and freezer, not oven proof and not microwaveable

Care instructions:

To ensure that the natural slate retains its original noble luster, it should be polished with olive oil every now and then. Not suitable for dishwashers, hand wash only.

Material & Features

FABRIC

Our fabric upholstery covers are made of pure synthetic fibers. Polyester is high quality synthetic fibers. This makes the fabric tear and abrasion resistant, making it ideal for the horeca industry.

Benefits:

- Hard-wearing, easy-care, long service life

Care instructions:

Against stains and dirt we recommend a sponge moistened with soapy water. Carefully rub with a cloth in one direction. To make the fabric dry faster, a hair dryer helps.

IMITATION LEATHER

Imitation leather upholstery covers are now almost indistinguishable from genuine leather. The material is natural fibers or synthetic fibers coated with a soft PVC surface.

Benefits:

- Hard-wearing & robust
- Dimensionally stable and UV-resistant
- Easy-care

Care instructions:

The easy-care and robust imitation leather can easily be cleaned from dirt. The surface only needs to be wiped clean. For heavier soiling, mild detergent or soapy water is sufficient for cleaning. If necessary, wipe with a dry, lint-free cloth.

SOLID WOOD

Natural material cut from trees. The individual lamellas can also be glued to panels. Real wood veneer is made of very thin, cut wooden lamellas, which can be glued to large leaves. Due to the natural growth habit of the tree each piece of wood gets its special grain and can also contain branches. Thus every solid wood furniture is a distinctive single piece.

Benefits:

- Stable, robust and durable
- Wide selection of wood types and natural or colored surface treatments
- Easy-care

Care instructions:

Wipe with a damp, soft cloth. Dry quickly.

Please note: Some types of wood can change their color over time with the influence of UV-rays.

STEEL

Very robust and stable metal material, which can be coated with various surface processes.

Benefits:

- For the interior, the surface is mainly powder-coated and chromed. Since this does not come in contact with the weather, this type of surface treatment is sufficient.
- For outdoor use the surface must be galvanized before the powder-coating. This results in adequate protection against corrosion.
- For stainless steel, there are different quality levels, which are suitable for outdoor use

Care instructions:

Clean occasionally with water and mild soap and dry quickly.

Material & Features

SOLID WOOD

Natural material cut from trees. The individual lamellas can also be glued to panels. Real wood veneer is made of very thin, cut wooden lamellas, which can be glued to large leaves. Due to the natural growth habit of the tree each piece of wood gets its special grain and can also contain branches. Thus every solid wood furniture is a distinctive single piece.

Benefits:

- Stable, robust and durable
- Wide selection of wood types and natural or colored surface treatments
- Easy-care

Care instructions: Wipe with a damp, soft cloth. Dry quickly.

Please note: Some types of wood can change their color over time with the influence of UV-rays.

PLYWOOD

This material consists of several layers of veneer, which are always glued transversely to the wood fiber. This results in a very high static strength. You can place plywood invisible or visible in any wood construction.

Benefits:

- Excellent mechanical strength and high stiffness

Care instructions: Clean laminated or sealed surfaces with a soft cloth and a mild detergent and wipe with a damp cloth. Clean the real wood veneer with a soft, damp cloth.

HPL (HIGH PRESSURE LAMINATE)

High pressure laminate boards (HPL PRINT) consist of several layers of kraft paper which are compressed and heated with high pressure to obtain a robust and resistant product.

Benefits:

- Lightweight and easy-care
- Non-flammable
- Heat resistant (up to +180°C), abrasion and scratch-resistant and resistant to chemical and organic substances

Care instructions: Clean with a soft cloth and mild detergent and wipe it with a damp cloth.

Material & Features

MONOBLOCK LAMINATE

Monoblock laminate consists of a mixture of wood chips and special synthetic resins. It is extremely resistant to weathering, chemical substances and mechanical stress.

Benefits:

- Stable and robust
- Smooth, waterproof and easy-care surface
- Extremely weather and heat resistant, scratch resistant and resistant to acidic food, grease and ashes

Instructions for use and care: Suitable for indoors and outdoors. Clean with a cloth soaked in mild detergent and wipe off quickly. Do not use aggressive products.

SOLID WOOD

Since solid wood is a natural material, the table tops may have grains and knot-holes.

Benefits:

- Stable, robust and durable
- Wide selection of wood types and natural or colored surface treatments
- Easy-care

Care instructions: Wipe with a damp, soft cloth. Dry quickly.

HPL

(High pressure laminate)

High pressure laminate boards (HPL PRINT) consist of several layers of kraft paper which are compressed and heated with high pressure to obtain a robust and resistant product.

Benefits:

- Lightweight and easy-care
- Non-flammable
- Heat resistant (up to +180°C), abrasion and scratch-resistant and resistant to chemical and organic substances

Care instructions: Clean with a soft cloth and mild detergent and wipe it with a damp cloth.

REAL WOOD VENEER

Chipboards consist of wood particles or fibers, which are pressed with a synthetic resin under heat. The finished panels are then finished with real wood veneer provided.

Benefits:

- Stable, robust and resistant to deformation
- Wide selection of wood types for the veneer
- Surface treatment as for real wood possible (dyeing, varnishing or waxing)

Instructions for use and care: For indoors only. Furniture with wood veneer must be protected from moisture.

COMPACT TABLE TOPS

Compact table tops are suitable for indoors and outdoors. In addition, our table tops meet the requirements of the DIN EN 438 standard for consistently high quality.

Benefits:

- High resistance to UV-rays
- Special weather, cigarette glow and heat resistance:
- Extraordinary scratch, abrasion and impact resistance
- Stain resistant and easy-care

TABLE BASES FOR STANDARD TABLES

FOLDING BASES FOR STANDARD TABLES/ BAR TABLES

Material & Features

CAST IRON

Coated iron furniture is durable, easy to clean and stable.

Benefits:

- Extremely stable & sturdy for more safety in your ambience
- Durable & robust: an investment that pays off
- Easy to clean: saves time

Care instructions: Powder-coated parts can be cleaned with a soft sponge, clear water and some dish-washing detergent and then dried with a dry cloth.

STEEL

Very robust and stable metal material, which can be coated with various surface processes.

Benefits:

- For the interior, the surface is mainly powder-coated and chromed. Since this does not come in contact with the weather, this type of surface treatment is sufficient
- For outdoor use the surface must be galvanized before the powder-coating. This results in adequate protection against corrosion
- For stainless steel, there are different quality levels, which are suitable for outdoor use

Care instructions: Clean occasionally with water and mild soap and dry quickly.

ALUMINUM

Aluminum furniture is lightweight and therefore also very handy to transport. At the same time, they are very robust and can be easily left out even in the rain, also ideal for regions along the sea.

Benefits:

- Weather-resistant
- Lightweight and stable
- Absolutely corrosion-resistant

Care instructions: Aluminum furniture is very easy to care for. To clean the surfaces, we recommend clear water or a gentle lye along with a soft cloth.

Important notice for the purchase of table tops and table bases

Our table bases, together with the table top sizes recommended by us, meet the requirements for stand and tilt safety. Please pay attention to our recommendations! Prerequisite is a proper installation according to our assembly instructions. In the case of deviating combinations, stability and safety against tilting can be impaired. The recommended table top size can be found on the indicated page.

Material & Features

BATYLINE®

BATYLINE® is a high-quality, PVC coated micro grid fabric. The material is characterized by an air-permeable, resistant and easy-care fiber-fabric structure, which is particularly tear-resistant. It is resistant to UV-rays, does not deform and is easy to clean. Because of its structure, the fabric dries very quickly.

Benefits:

- Extremely tear and abrasion-resistant
- Particularly water and dirt-repellent
- Dimensionally stable

Care instructions: BATYLINE® can be cleaned with soapy water. A sponge with water is sufficient in most cases. Do not use scouring or bleaching agents!

ALUMINUM

Aluminum furniture is lightweight and therefore also very handy to transport. At the same time, it is very robust and can be easily left out even in the rain, also ideal for regions by the sea.

Benefits:

- Weather-resistant
- Lightweight and stable
- Absolutely corrosion-resistant

Care instructions: Aluminum furniture is very easy to care for. To clean the surfaces, we recommend clear water or a gentle lye along with a soft cloth.

PLASTIC WICKERWORK

Plastic wickerwork consists of an artificially produced fiber, which is characterized by high flexibility and tear strength. No color changing over time due to fully dyed fiber. They do not absorb moisture and the furniture is quickly drying after rain showers.

Benefits:

- Weather & UV-resistant
- Colorfast
- Extremely durable

Care instructions: Soiling can be cleaned with a damp cloth or soft brush and, if necessary, with soapy water. Hard brushes should never be used. For a longer life, we recommend wintering in sheltered rooms or the use of protective covers.

POLYPROPYLENE

Polypropylene is a very stable and reliable plastic and is characterized by a high strength.

Benefits:

- Durable and robust
- Resistant to weather and environmental influences
- Antistatic

Care instructions: Plastic furniture should occasionally be cleaned with water and a mild detergent. Strong agents can attack the plastic surface.

LOUNGE TABLES AND STOOLS

Material & Features

TEAKWOOD

Teak is a durable and high-quality planting wood, which is very well suited for outdoor furniture because of its unique stability and resistance.

Benefits:

- Weather-resistant
- Robust & durable

Instructions for use and care: Teak has a naturally high oil content and can withstand extreme weather conditions even without great maintenance. However, due to the influence of rain and sun, a natural weathering process arises. To keep the original color, we recommend to use our care kit (SKU 10090379) once per season. Teak furniture should be stored in winter in sheltered rooms. Avoid storing this furniture in heated rooms because the wood dries out quickly. We recommend tightening the screws regularly.

PLASTIC WICKERWORK

Plastic wickerwork consists of an artificially produced fiber, which is characterized by high flexibility and tear strength. No color changing over time due to fully dyed fiber. They do not absorb moisture and the furniture is quickly drying after rain showers.

Benefits:

- Weather and UV-resistant
- Colorfast
- Extremely durable

Care instructions: Soiling can be cleaned with a damp cloth or soft brush and, if necessary, with soapy water. Hard brushes should never be used. For a longer life, we recommend wintering in sheltered rooms or the use of protective covers.

ALUMINUM

Aluminum furniture is lightweight and therefore also very handy to transport. At the same time, it is very robust and can be easily left out even in the rain, also ideal for regions by the sea.

Benefits:

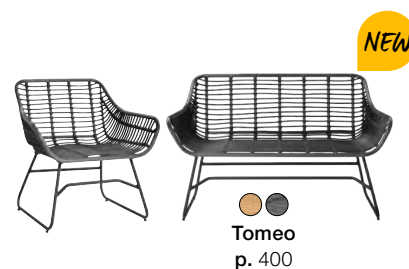

- Weather-resistant
- Lightweight and stable
- Absolutely corrosion-resistant

Care instructions: Furniture made of aluminum does not require any special maintenance. Clear water or a soft lye together with a soft cloth are sufficient for the cleaning of the surfaces.

The different ISO standards

- The ISO 12947-2 standard specifies the abrasion resistance of an upper material using the Martindale process, simulating a natural use of the upper material by friction.
- The ISO 105 B02 standard specifies the light fastness of an upper material by exposing it to an artificial light source.
- The ISO 105 X12 standard specifies the abrasion resistance and solvent resistance of an upper material. Two tests are planned, one by rubbing with a dry fabric and the other by rubbing with a damp fabric.
- The ISO 12945-2 standard specifies pilling resistance using a device that simulates linting of the fabric.

PRODUCT INFORMATION

Product features

Material

Fit

Service

Care

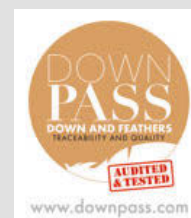

Tencel™ environmentally friendly fiber

Tencel™ fibers have high dry and wet strength, are soft and absorb moisture very well. Textiles made from it have a smooth and cool feel with a flowing drape, are wrinkle-resistant, softer and gentler than silk and are easy-care.

DOWNPASS for dreamlike sleep

The DOWNPASS seal recognizes bedding whose feather and down fillings have been ethically sourced. Feathers and downs do not come from live animals, are not by-products of foie gras production and are traceable back to the rearing area. So you can be sure that your product was made according to strict animal welfare criteria.

WERIN® TEC for relaxed working

WERIN® TEC ensures pleasant working conditions in the kitchen. The innovative functional material offers a comfortable fit, best comfort and thus optimal freedom of movement. Thanks to the active moisture management and cooling effect for the skin, you stay cool even in stressful situations.

Sanitized® neutralizes odors

The Sanitized® hygiene function is a registered quality seal and offers optimum protection against perspiration and odors. Even after intensive use, the development of unpleasant odors is inhibited. Products with Sanitized® function remain hygienically clean longer than other products.

TABLE LINEN

Table shape	Table size in cm	Tablecloth size in cm
	70x70 80x80	40x130 80x80 100x100 130x130

	80x170 90x180	130x220
	80x200 90x210	130x250
	80x230 90x240	130x280
	Ø 100	Ø 140 Ø 160
	120x180	160x220
	Ø 110	Ø 170

It's easy to determine how big your custom table linen needs to be: take the measurement of your table and add 20-25 cm overhang on each side. For example, if your table is 80x80 cm, you will need a tablecloth in a size of 120x120 cm to 125x125 cm. In addition, we add shrinkage allowances.

EVERYTHING

fits

How to find the right size

① Collar

Measure the neck circumference loosely below the larynx.

② Chest

Measure the strongest point horizontally around the chest.

③ Waist

Measure loosely at the narrowest point of the upper body, such as on belly button height.

④ Hip

Measure at the widest point of the buttock when dressed.

⑤ Inseam

Measure from crotch down to the floor.
