

GRILL BTU RATINGS

DISCONTINUED MAGMA® PRODUCTS

As a rule, MAGMA® does not promote the BTU rating of our grills, as it indicates only the fuel consumption and not necessarily the actual heat output performance to the cooking surface. Analogous to automobiles that use a large quantity of gas while producing very little horsepower, most grills are rated with high BTU output but are inefficient in directing the energy to the cooking area. MAGMA® grills are engineered to be extremely fuel efficient, as fuel is limited to what is carried on-board.
