1,2 Kg.
38 mm.

Our EVESCO diaphragm hand bilge pumps has been designed for yachtsmen by yachtsmen. Only the very best materials has been used to give absolute best performance and long trouble free life.

The pump-body, rear body , rocker-arm and inspection screw-cover are made of strong tough plastics. All rubber parts are made of tough oil resistant Nitrile rubber. All bolts, nuts and the pump handle are made of stainless steel AISI-329

We have constructed our pumps to be used in all Pleasure crafts and Life boats where high output is required. The pumps are used as bilge pumps, wastetankpumps, diesel pumps etc.

All pumps are cleaned inside in seconds without any use of tools—just unscrew the inspection front cover by hand.

Flow direction can be altered in 8 different directions. Just unscrew the 8 bolts and nuts and turn the Flow direction as wanted and fix the bolts and nuts again.

EVESCO PUMP EVS1000.: Can be installed on deck, on bulkhead or under deck.

EVESCO PUMP EVS2000.: Can be fitted on deck or bulkhead.

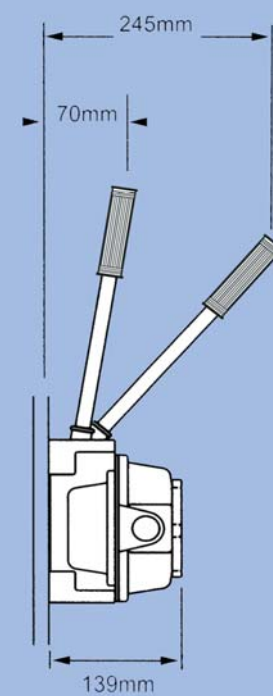

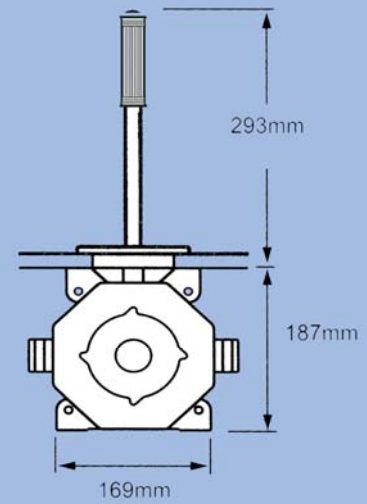

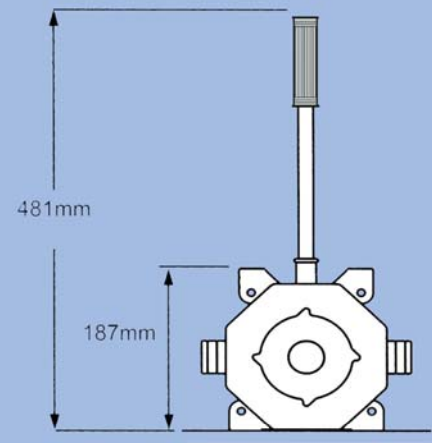

EVESCO PUMP EVS3000.: Can be fitted behind bulkhead, with only the handle being visibly.

EVESCO SEAL EVS3005.: Is a watertight cover easy fitted EVS3000 pump.

EVESCO KIT EVS9000.: Sparepartkit in Nitrile rubber with screws

BILGE / TOILET / WASTETANKPUMP.

	4008 = 12 volt dc.	4008A = 24 volt dc.
Powerconsumption. max.amp.	6	3
Suction, mtr.	4	4
Delivery, mtr.	8	8
Capacity, ltr/min.	40	52
Rpm,	50	62
Weight.	3,6	3,6

EVESCO can't rust – body made of tough nylon and delrin – back made of seawater resistant aluminium covered with nylon – ball-bearing, bolts and nuts made of stainless steel excentric made of special brass – motor from bosch – diaphragm and valves made of oilrecistant nitrile rubber.

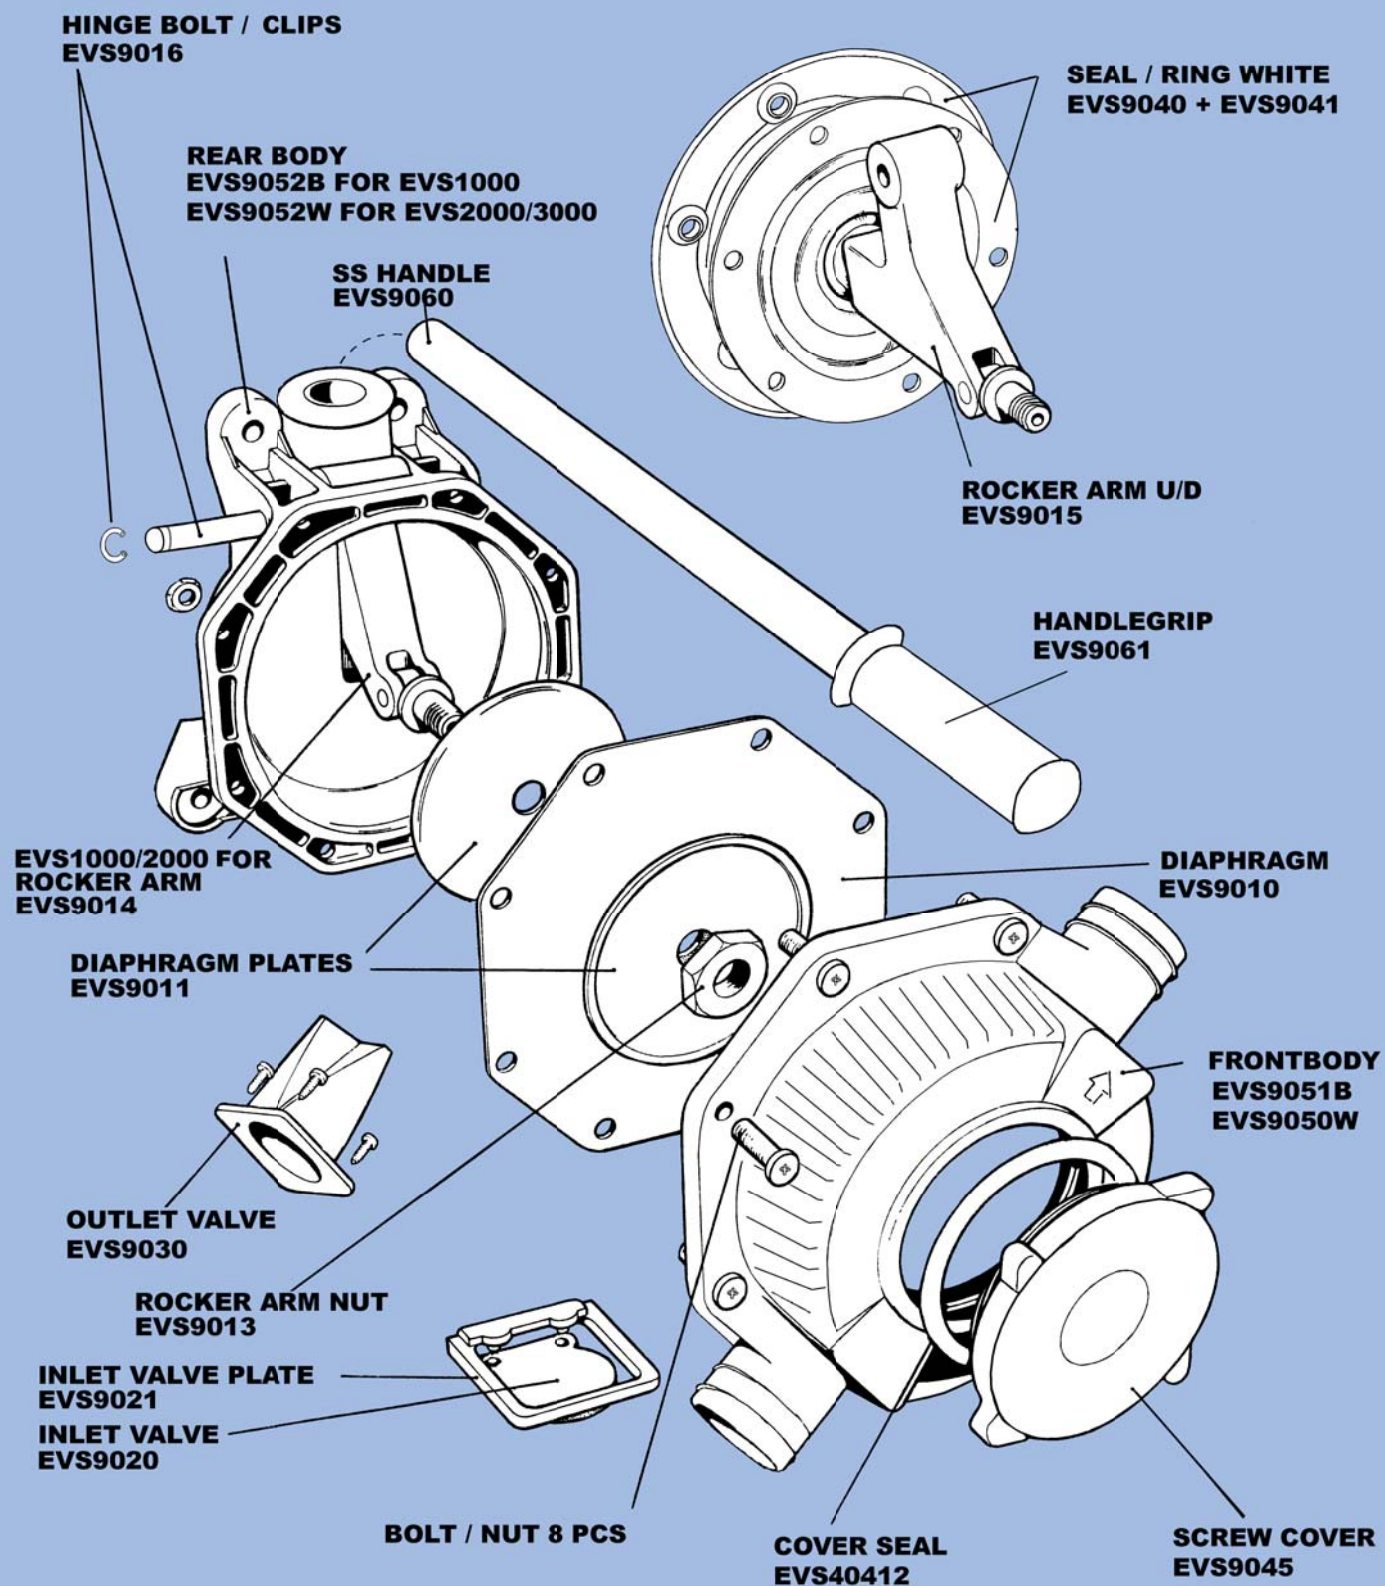

EVESCO is constructed as bilge-, toilet- and wastetankpump and allows dirt etc. To pass through the pump without any notice in capacity.

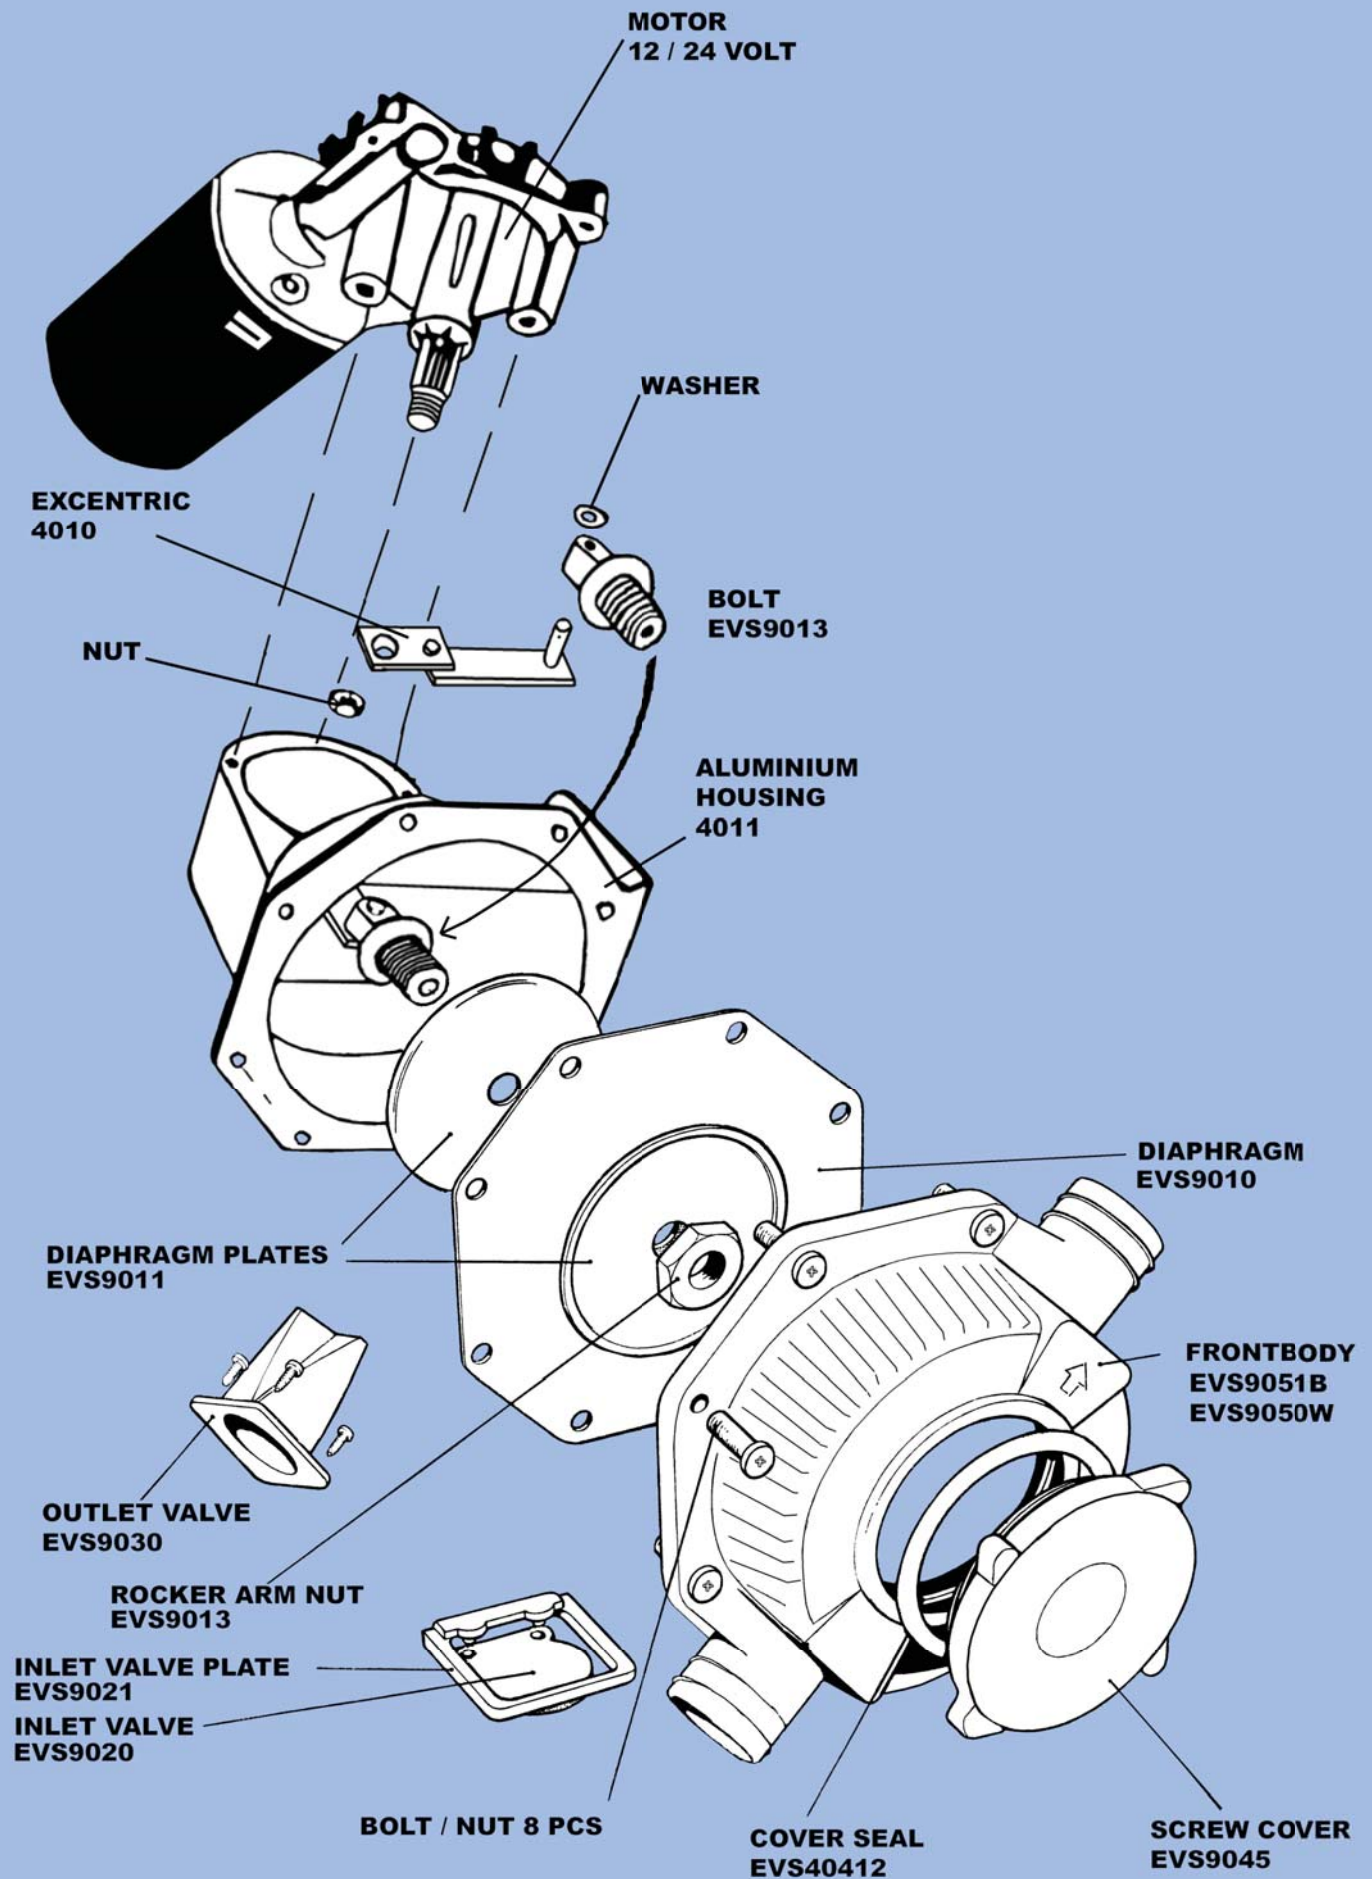

EVESCO is cleaned inside in seconds without any use of tools – just unscrew the front cover by hand.

EVESCO is a robust pump which can be run with or without water.

EVESCO can be supplied with an automatic switch which will start the pump at high waterlevel and shut the pump again at low waterlevel. We can recommend this switch installation for your safety.

EVESCO is as standard supplied with horizontal flow, but the construction allows to alter this by loosening bolts and nuts and turning the body the way you want. Motor must always be mounted in top. If the pump is used in connection with a toilet or a waste tank, the flow direction must be vertical with suction from below.

This image shows a full page of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.
