POWERSIDE®

QubeScan

A Power Quality Analytics & Fleet Management Platform

Simple, Secure Power Quality Monitoring

QubeScan is a cloud-based, always-on, remote monitoring solution for your Powerside PQ Edge® and PQube® 3 power analyzer fleet. Watch over your systems 24/7—no matter where you are—to make quick, precise decisions and take action when needed.

QubeScan monitors power quality to help create operational efficiencies for a variety of industries, including:

- **Commercial & industrial**
- **Utilities**
- **Data centers**
- **Renewables/EV**

Fleetwide Compliance & Analytics Tools

KEY QUBESCAN FEATURES

- **Real-Time Data Access**
  Monitor live power quality metrics for commissioning, diagnostics and real-time visibility
- **Intuitive Dashboards**
  Visualize events, trends, power and energy disruptions with ease
- **Custom Trend Alerts**
  Configure alarms to quickly identify power quality issues before they disrupt operations
- **Automated Compliance Reports**
  Configure power quality reports on an automated, recurring basis for continuous health and compliance checks
- **Fleet Disturbance Analytics**
  Proactively identify problematic circuits fleetwide or sites experiencing recurring disturbances
- **Notification Center**
  Customize how you, your team and even external parties receive QubeScan notifications

Make Sub-Optimal Power Quality a Thing of the Past

QubeScan is an easy way to capture and convert real-time and trended power quality data into actionable insights.

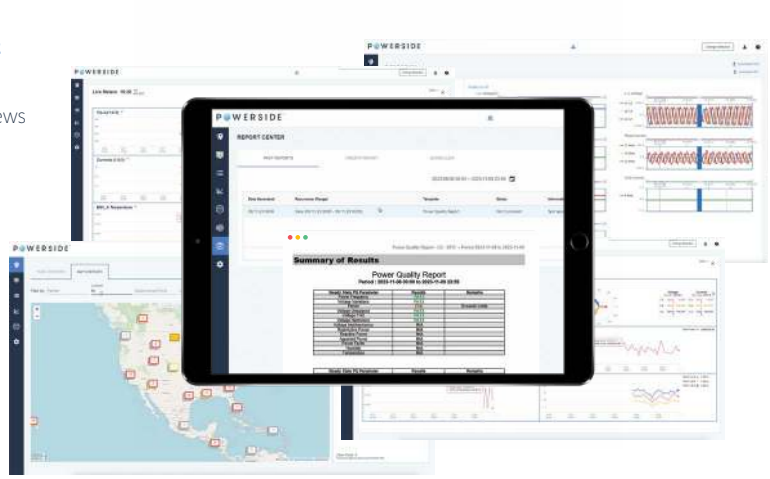

With QubeScan, you get:

- Unlimited data storage that empowers data-driven decision making
- Proactive maintenance that helps maximize performance and reduce disruptions
- Fleetwide views and analysis that help ensure your systems are running optimally long-term

QubeScan can help boost efficiencies and productivity, prevent unplanned downtime and save money along the way.

QubeScan Offers an Array of Benefits

Scalable Fleet Management
Monitor a diverse range of devices with customizable views and historical data access.

Proactive Detection
Identify power disturbances (voltage sags, surges, harmonics issues, etc.) before they have the chance to escalate.

Easy Reporting
Automatically generate and schedule reports and precisely log events.

Root Cause Identification
Pinpoint the underlying causes of power problems using advanced analytical capabilities.

Regulatory Compliance
Easily adhere to power quality standards to avoid fines.

Advanced Insights
Utilize tools for detailed analysis, assessment and tracking of waveforms, harmonic distortions and multi-circuit energy consumption.

Maximize the value of your power quality monitoring—with the only solution that gives you real-time access to the actionable data you need, when you need it.
