Automation Fair 2021

Automation Fair®

**SAVE
THE DATE**

NOV 10-11, 2021 • HOUSTON, TEXAS & ONLINE

With your health and safety top of mind, we are excited to welcome you to participate in the 2021 Automation Fair® event in-person in Houston, Texas or online in our hybrid experience.

The Automation Fair experience will feature engaging keynote presentations, interactive hands-on labs and technical sessions, industry-centric panel discussions, an exciting show floor showcasing the latest innovations and solutions from Rockwell Automation and members of our PartnerNetwork™, and the opportunity to participate in networking activities with your peers in the field.

Join us this November to experience the value and power of our IT/OT expertise.

Increased Protection, Performance, & Features

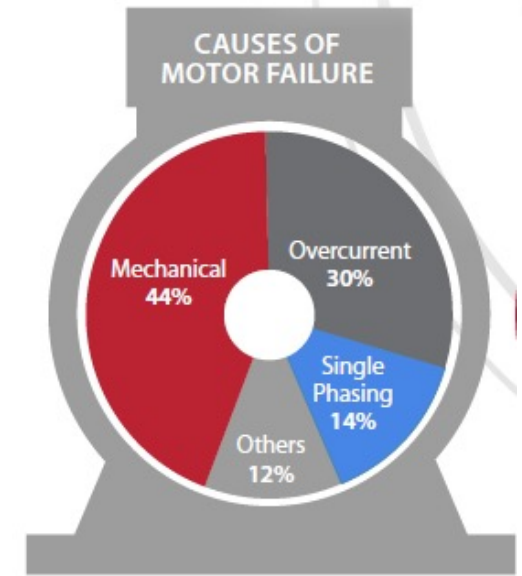

E300 – Advanced Electronic Overload Relay

Overview

The E300™ Electronic Overload Relay is the latest technology for motor protection that will help reduce your motor control investment and keep your plant running.

- Intelligent Motor Control
 - Native EtherNet/IP & DeviceNet connectivity with easy commissioning, control, and monitoring.
- Scalable Solutions
 - Modularity in the design provides the right solution to fit the target application.
- Diagnostic Information
 - Motor diagnostics to reduce troubleshooting and unplanned downtime.

Simultaneous real-time control, configuration, and data acquisition

Intelligent Motor Control and Diagnostics

The conventional approach

Many devices are still hard wired and unable to communicate with higher level control systems and are therefore unable to provide access to real-time data.

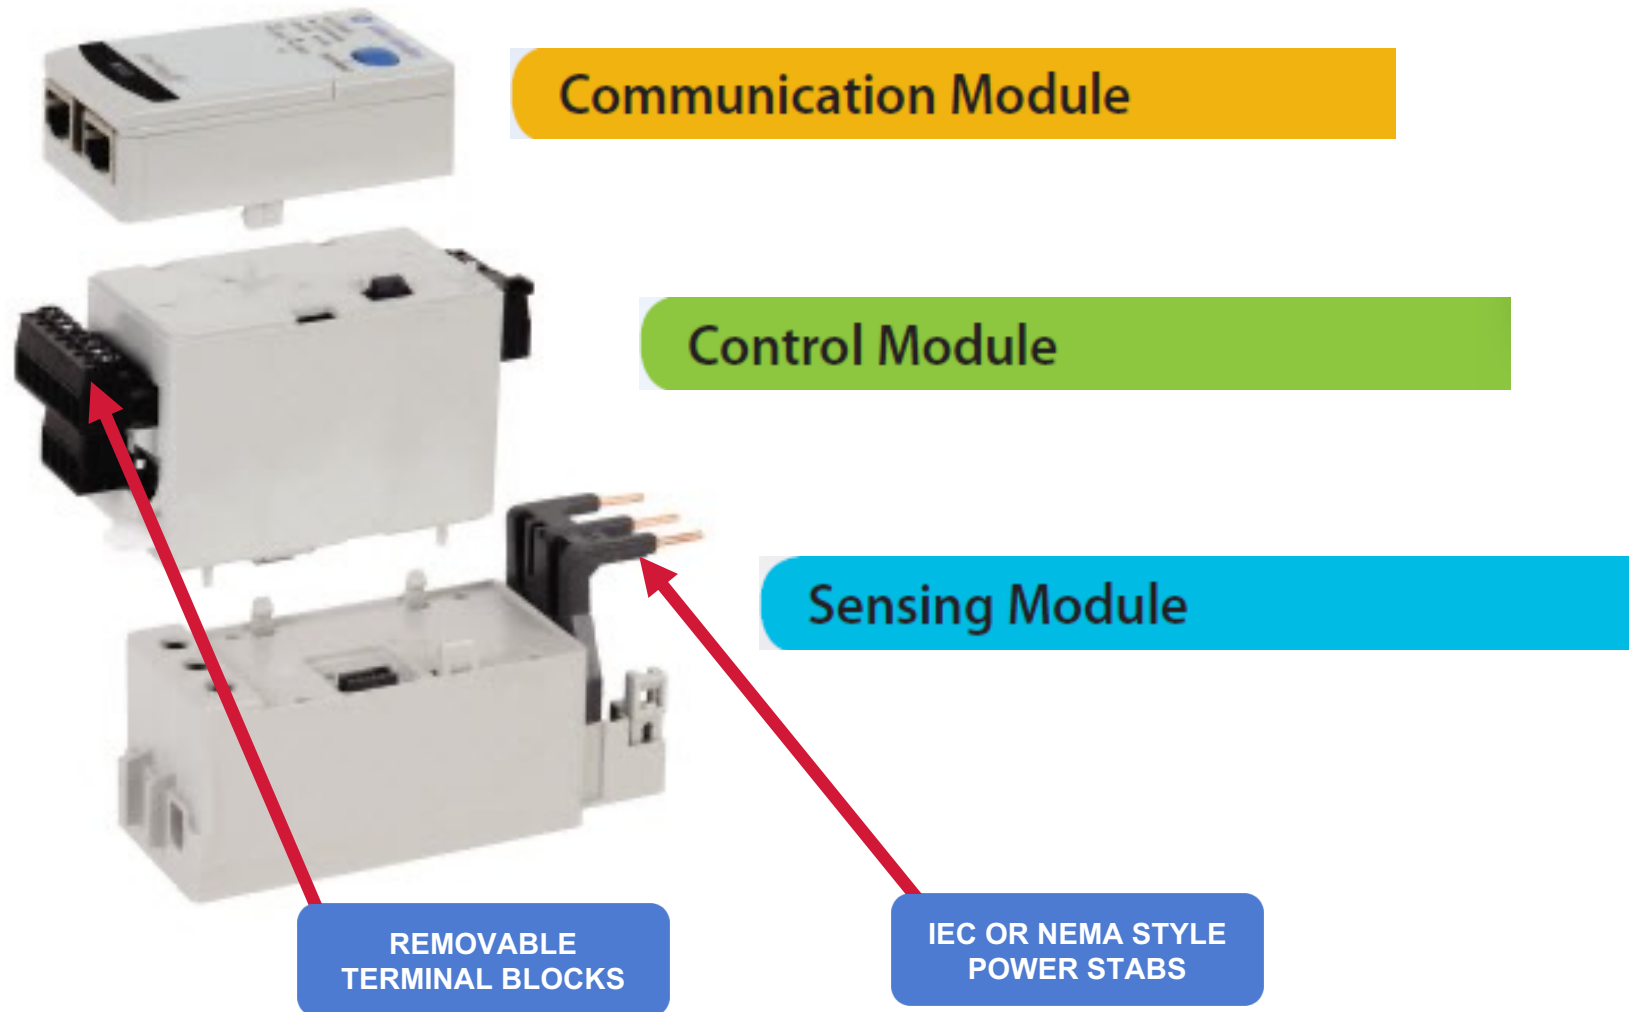

- No access to real-time data
- ON, OFF and Tripped - no pre-warnings possible
- User manual fault finding process - no diagnostic data
- Unnecessary downtime periods
- Higher maintenance costs possible
- Changing parameters requires a specialist engineer
- Hard to track and record energy costs

Today's intelligent approach

- Seamless communication and system visibility for increased performance and flexibility
- Operate and maintain motor performance through intelligent equipment and networks
- Reduce unplanned downtime with alarms and advanced diagnostic information
- Monitor energy consumption
- Remote monitoring helps keep personnel away from potential hazards
- Simplified troubleshooting and reduced start-up times

E300 – Advanced Electronic Overload Relay

Modular Design

E300 Overload Relay modules easily snap together and are secured with locking tabs.

54 Pre-Configured Operating Modes

- Overload
- Non-reversing Starter
- Reversing Starter
- Wye/Delta Starter
- Two-speed Starter
- Monitoring Device

Scalable Solutions

The modular design allows users to have choices in each of the sensing, control, and communications modules with additional accessories to tailor the E300 overload relay for the exact needs of the application:

- Multiple Communication Options (*EtherNet/IP, DeviceNet, USB Type B*)
- Multiple Sensing Capabilities (*Current, Ground Fault Current, and Voltage and Power*)
- Simplified Control Wiring (*120V AC, 240V AC, and 24V DC*)
- Wide Current Range (*10:1 and Higher*)
- Expansion I/O (*Digital and Analog I/O*)
- Operator Interfaces (*Multiple Languages*)
- Modular Configuration for Fast Replacement

E300 Sensing Modules

- Consists of Three Styles
 - Voltage / Current / Ground Fault (VIG)
 - Current / Ground Fault Current (*I*G)
 - Current (*I*)
- Each has **Four** Current Ranges
 - 0.5 – 30 A
 - 6 – 60 A
 - 10 – 100 A
 - 20 – 200 A

New 100-E Contactor
Mounting (20-200 A)

Terminal Covers

193-ESM-VIG-200-A-T
with Terminal Covers

200 A Pass-thru
(up to 1000V rated)₁₃

E300 New Current Transformer (CT) Kits

- Consists of Two Types

- UL – 300 A and 600 A
- CE – 300 A and 400 A

Catalog Number	Current Ratio	Accuracy (60 Hz)	Burden VA
193-CT-UL-300A	300:5A	± 1 %	8.0
193-CT-UL-600A	600:5A	± 1 %	30.0

Catalog Number	Current Ratio	Accuracy (60 Hz)	Burden VA
193-CT-CE-300A	300:5A	± 1 %	1.5
193-CT-CE-400A	400:5A	± 1 %	1.5

E300 Control Modules

- I/O Only

- 4 Inputs 240V AC / 3 Outputs
- 4 Inputs 120V AC / 3 Outputs
- 6 Inputs 24V DC / 3 Outputs
- 2 Inputs 240V AC / 2 Outputs
- 2 Inputs 120V AC / 2 Outputs
- 2 Inputs 24V DC / 2 Outputs

New Reduced I/O
Count Control
Modules w/ Series B

- I/O and Protection

- 2 Inputs 240V AC / 2 Outputs / PTC / GF
- 2 Inputs 120V AC / 2 Outputs / PTC / GF
- 4 Inputs 24V DC / 2 Outputs / PTC / GF

(Series B Only)

Series B Change from Series A

- Highlighted Changes

- No change to form factor or fit in E300 stack
- Parameter back-up/restore via web server
- Exida SIL2 Certification (EN61508)

E300 Communication Modules

- Consists of Three Styles

- EtherNet/IP
- DeviceNet
- Parameter Configuration Module (E200/PCM)

- Dual RJ45 Ports
- Supports Star, Linear, & Ring Topologies
- Embedded Web Server
- Add-on Profile (AOP) & HMI Faceplate Objects

- Single 5-pin DeviceNet connector
- E3/E3+ Emulation Mode (Ser. B Only)
- Automatic Device Replacement (ADR)
- Rotary Dials to set Node Address

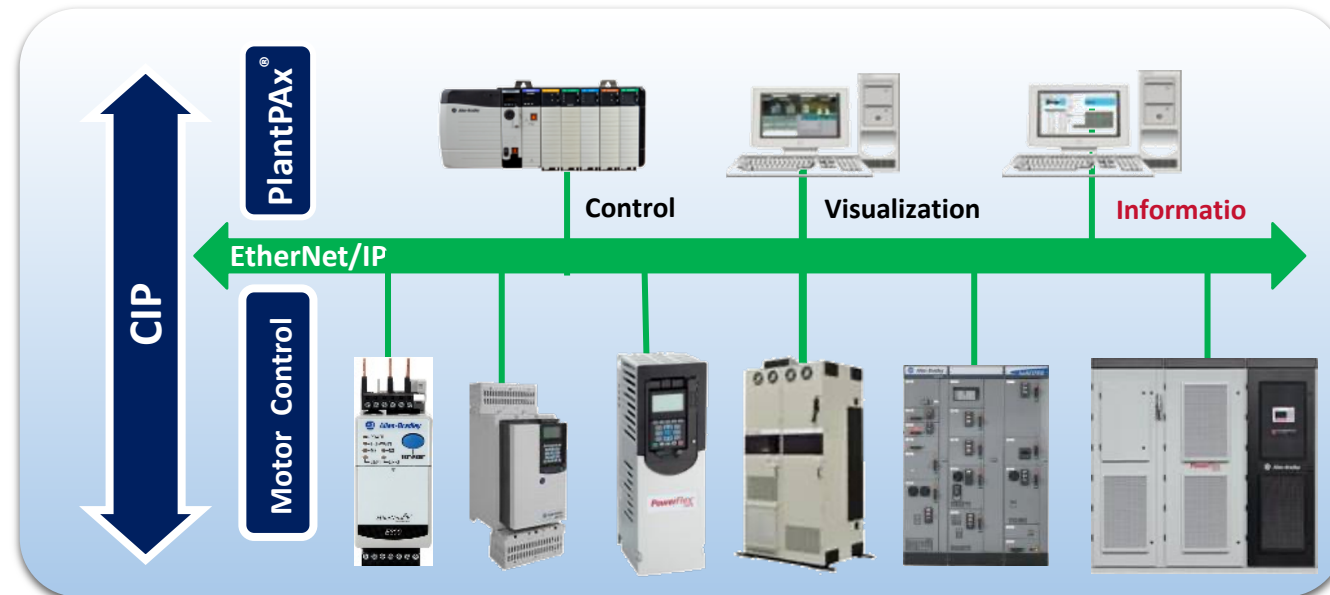

- Non-networked Configurable with CCW
- 8-pos DIP switch for protection feature selection
- Rotary Dials to set Motor FLA

Intelligent Motor Control

The E300 is fully integrated into the Integrated Architecture®

- Network connectivity - *Native EtherNet/IP and DeviceNet reduces hardware and engineering cost*
- Integrated into Logix – *Device profiles and faceplates help reduce engineering time and project development*
- Automatic Device Configuration – *Reduces time to repair*

Simultaneous real-time control, configuration, and data acquisition

E300 Overload Relay Modbus TCP/IP Communication Module

- ✓ HMS-branded E300 communication module with native Modbus TCP/IP communication
- ✓ No change in form factor within the MCC – maintains existing Ethernet cabling, control wiring and mounting
- ✓ Maintain existing network Stratix 5700 switch infrastructure
- ✓ Reduces commissioning time and effort with predefined Modbus registers for complete overload relay functionality
- ✓ Embedded webserver for complete parameter access and configuration

Easy Integration **Into** Logix

The E300 has an Add-on Profile for RSLogix 5000® and Studio 5000 Logix Designer® environments.

- Creates meaningful tag names
- Configures the E300 (supports ADC)
- Tested to v16 of RSLogix 5000

The image shows two overlapping windows from the Rockwell Studio 5000 software. The top window is the 'Module Properties: Local (193-ECM-ETR 3.1)' dialog, with the 'General' tab selected. It displays the following information:

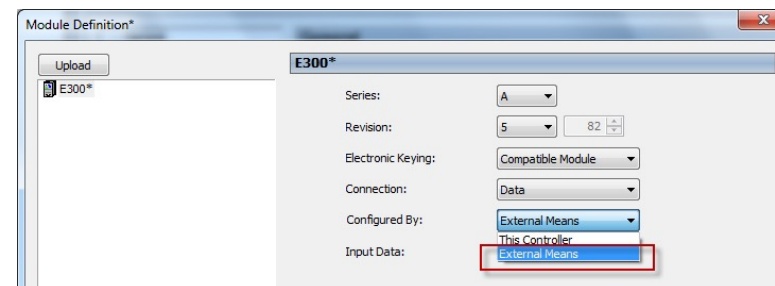

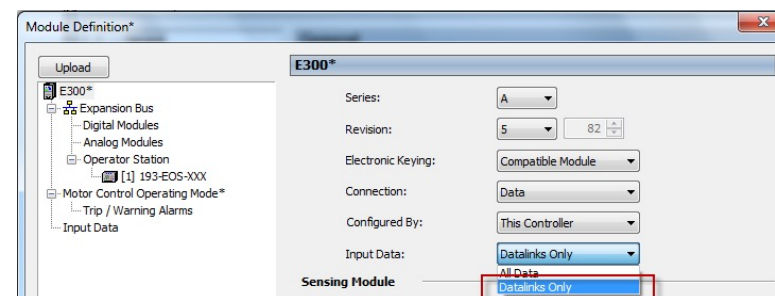

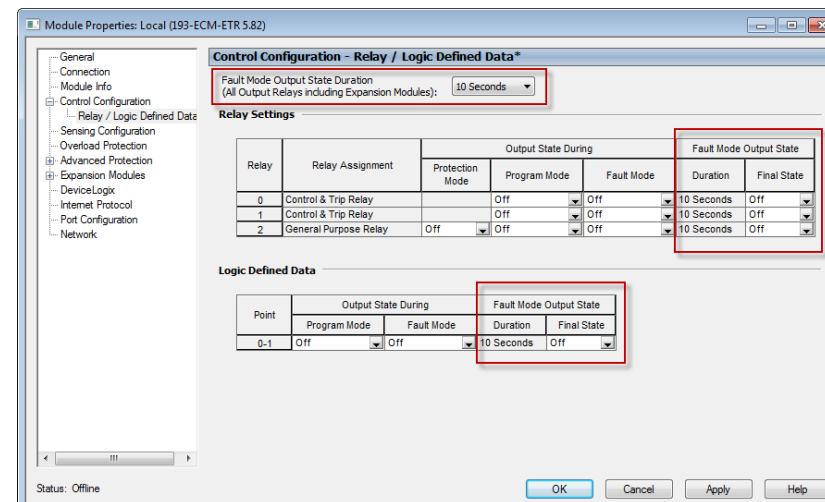

- Type: 193-ECM-ETR E300 Electronic Overload Relay, 2-Port
- Vendor: Allen-Bradley
- Parent: Local
- Name: E300
- Description: (empty)
- Ethernet Address: Private Network: 192.168.1. 11
- Module Definition: Series: A, Revision: 3.1
- Electronic Keying: Compatible Module
- Digital Module 1: Undefined, Analog Module 1: Undefined
- Digital Module 2: Undefined, Analog Module 2: Undefined
- Digital Module 3: Undefined, Analog Module 3: Undefined
- Digital Module 4: Undefined, Analog Module 4: Undefined
- Control Strategy: Overload, Operator Station: 193-EOS-SCS

The bottom window is the 'Motor Control' configuration dialog. It shows a tree view on the left with 'E300' expanded to 'Motor Control'. The 'Control Strategy' is set to 'Overload'. The 'Mode' is set to 'Control & Trip Relay'. A schematic diagram shows a control module containing a relay (Relay 0) connected to terminals R03 and R04, which are connected to a motor (M1). A note at the bottom states: 'The diagram elements are for reference purposes only and may not represent actual field wiring.'

Easy Integration **Into** Logix

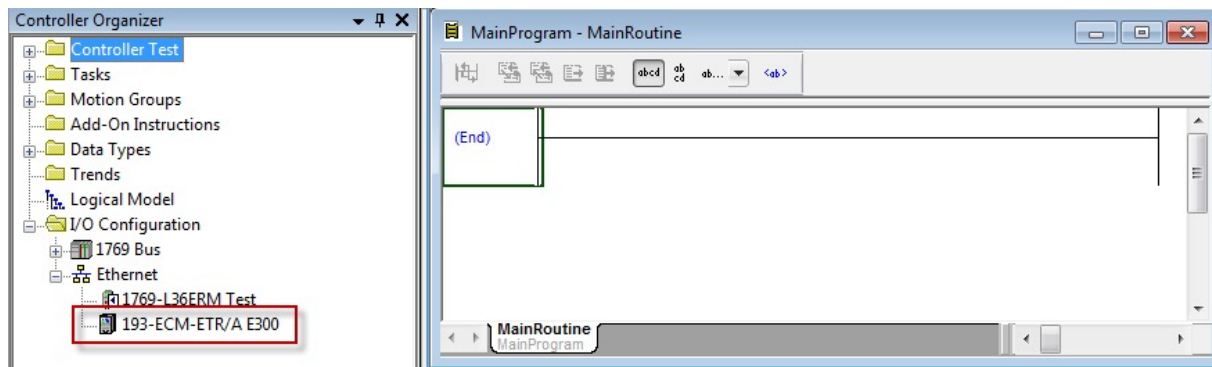

The E300 has a new Add-on Profile (v6.02) for RSLogix 5000 and Studio 5000 Logix Designer environments.

- Output duration timer for redundant control applications
- User selectable input tags
- Enable/disable Automatic Device Configuration
- Additional analog output mode selections

Easy Integration **Into** Logix

Pre-Configured Operating Modes (embedded DeviceLogix programs) allow the Control Station or Diagnostic Station to be used as an operator interface for hand / auto (local / remote) motor control with no ladder logic

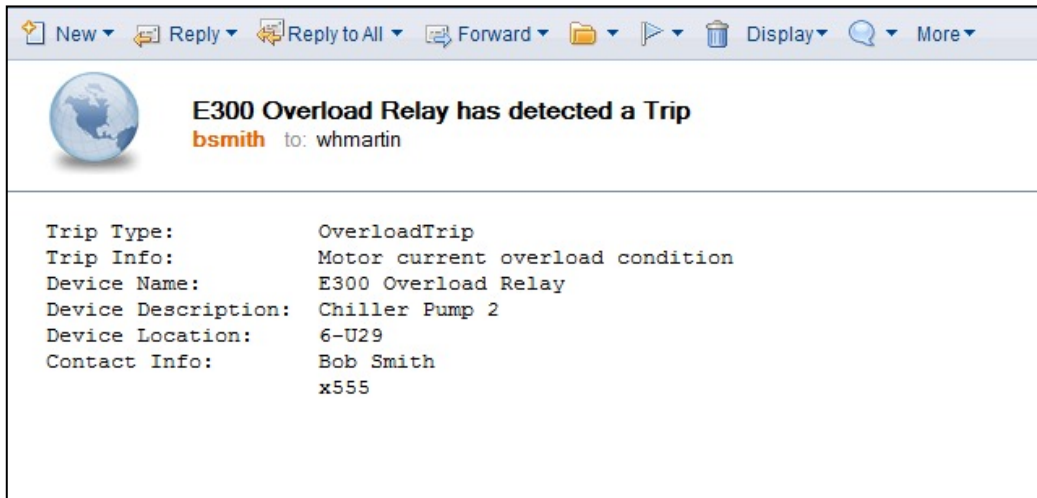

Name	Value	Force Mask	Style

E300.O.EmergencyStartEn	0		Decimal
E300.O.RemoteTrip	0		Decimal

New Series B Diagnostic Station “CopyCat” feature now includes back-up of any custom DeviceLogix program.

Network Connectivity – EtherNet/IP

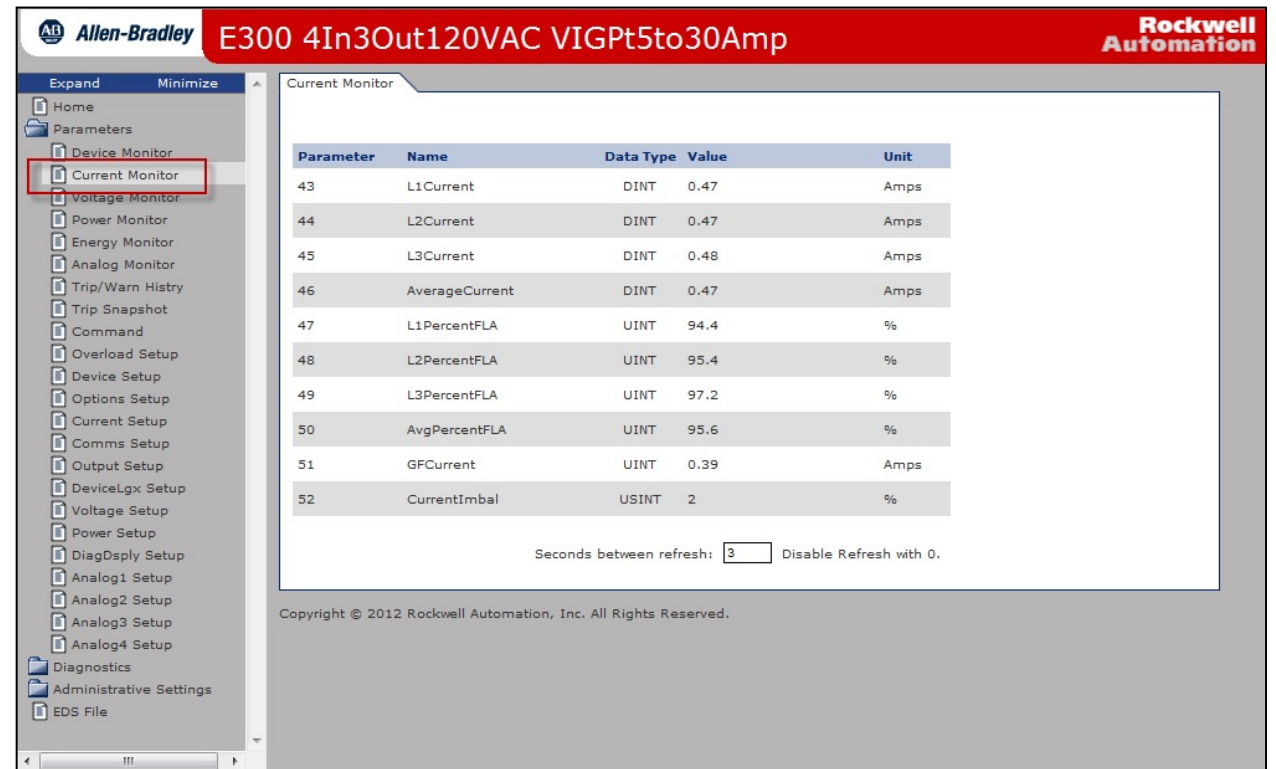

- Two Ethernet ports that operate as an Ethernet switch
 - Star Topology
 - Linear Topology
 - Ring Topology (DLR)
- Embedded web server
- Supports SMTP messaging

Network Connectivity – DeviceNet

- The E300 now supports DeviceNet as a communication option
 - Provides modernization path for older E3/E3+ products
 - Interface supported in RSNetWorx™ for DeviceNet
 - E3/E3+ Emulation mode for easy and simpler interface experience

RSNetWorx™
For DeviceNet®

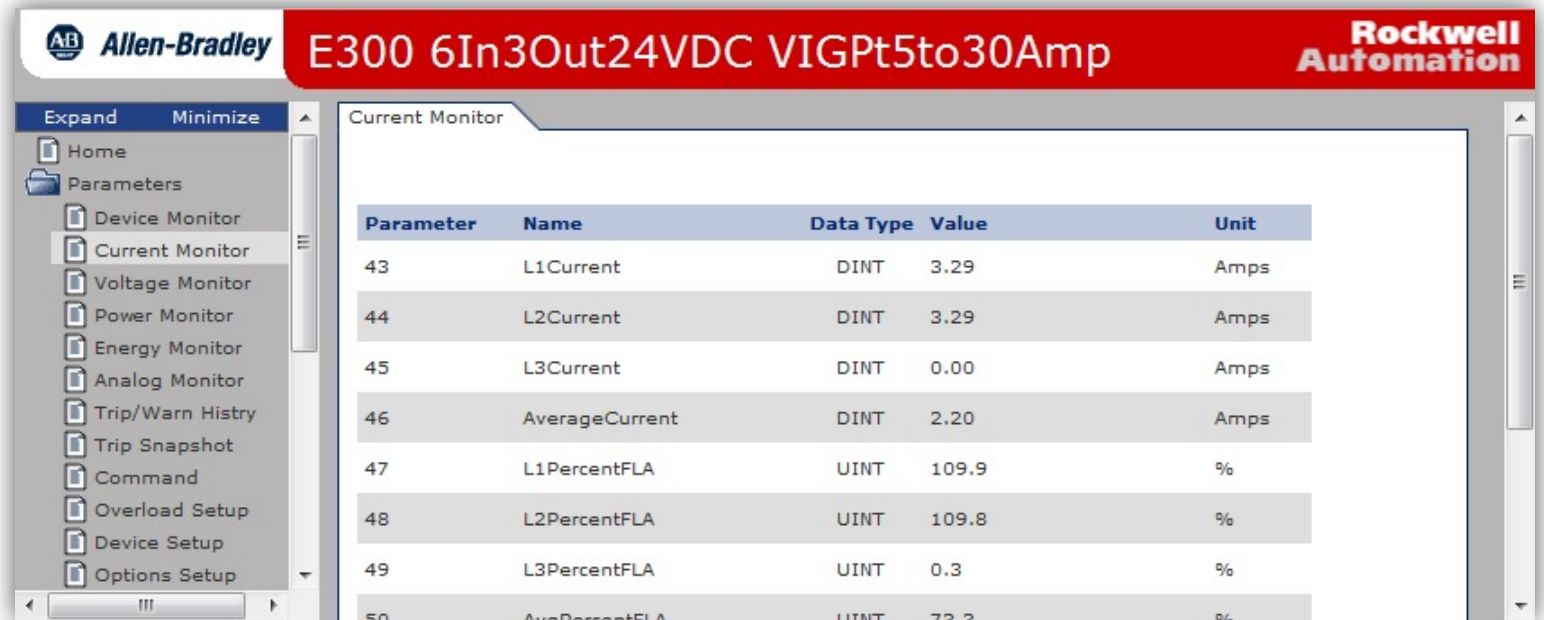

E300 Expansion Modules

- Digital I/O (4 In / 2 Out – Add up to 4)
 - AC (120V)
 - AC (240V)
 - DC (24V)
- Universal Analog I/O (3 In / 1 Out – Add up to 4)
 - 0-10V DC
 - 0-20mA DC
 - RTD Sensors
- Power Supply
 - Supplemental power for the expansion bus
- Operator Stations
 - Control Station
 - Diagnostic Station (Multiple Languages)

Motor Diagnostics

- The E300 provides a wide variety of diagnostic information to monitor motor performance and proactively alert users to potential operational issues
- This information can trigger either manual or automatic intervention before the occurrence of an unplanned shutdown
 - Voltage, Current, and Energy
 - CIP Energy Enabled
 - Trip / Warning Histories
 - % Thermal Capacity Utilization
 - Motor Winding Temperature
 - Trip Snap Shot
 - Time to Trip
 - Time to Reset
 - Operational Hours
 - Number of Starts

The screenshot displays the Rockwell Automation interface for an Allen-Bradley E300 6In3Out24VDC VIGPt5to30Amp motor. The interface includes a navigation pane on the left with options like Home, Parameters, Device Monitor, Current Monitor, Voltage Monitor, Power Monitor, Energy Monitor, Analog Monitor, Trip/Warn Histy, Trip Snapshot, Command, Overload Setup, Device Setup, and Options Setup. The main area shows a 'Current Monitor' table with the following data:

Parameter	Name	Data Type	Value	Unit
43	L1Current	DINT	3.29	Amps
44	L2Current	DINT	3.29	Amps
45	L3Current	DINT	0.00	Amps
46	AverageCurrent	DINT	2.20	Amps
47	L1PercentFLA	UINT	109.9	%
48	L2PercentFLA	UINT	109.8	%
49	L3PercentFLA	UINT	0.3	%
50	AvgPercentFLA	UINT	73.2	%

Reduced Wiring and Installation Costs

E300 Overload Relay modules easily snap together and are secured with locking tabs.

Simplified wiring between E300 Overload Relay and 100-C Contactor

Operator Stations feature a standard 22 mm push button cutout

Flexibility and Functionality

The E300 can be applied to three styles of motor starters

- Panel / DIN Rail
- 100-C IEC Contactors
- 300/500 NEMA Contactors

NEW! E3 Plus to E300 Migration Guide

Migration Solutions

E3/E3 Plus to E300/E200 Electronic Overload Relay

Why Upgrade or Migrate

While the E3/E3 Plus Overload Relay has been a valuable part of our portfolio for the past twenty years, this product will no longer be available for sale after October 2019.* Now is the time to migrate to the E300™ or E200™ Electronic Overload Relay. As the latest state-of-the-art electronic overload relay offering, the E300/E200 Electronic Overload Relay offers many modular features designed to help improve your motor control and protection needs.

E300/E200 Basic Product Overview

- Modular design for application customization with various sensing, control and communication module options
- Diagnostic information to monitor motor performance
 - Current, voltage, power and energy
 - % Thermal capacity utilization
 - Time to trip/reset
 - Trip snapshot
 - Trip/warning histories
- Logix integration with add-on profiles, add-on instructions and pre-configured operator faceplate objects

Why Upgrade or Migrate?

Rockwell Automation understands that your overload relays are a critical asset in your automation system, and we support that by providing you with the latest technology to maximize your investment. New technologies can improve and extend the operation of existing equipment and provide an immediate boost to productivity. By migrating from your legacy E3/E3 Plus™ Overload to a new E300/E200 Electronic Overload Relay, you can help to decrease downtime, increase speed to market, and optimize operations well into the future.

We will help you to meet this demand to innovate by proactively planning and managing your transition every step of the way to help you get the highest possible return on your automation investment.
