

PROTOCOL USAGE

PHASE 4

Key Functions

- Aids the body's normal detox processes by binding and removing environmental toxins and other unwanted elements
- Provides nutritional factors to help maintain the structure and function of cells
- Supports long-term health maintenance by addressing common, daily exposures to toxins

Details

As part of our comprehensive protocol lineup, HM-ET Binder is the proverbial “cleanup” batter. This product is designed to focus on chelating both heavy metals and environmental toxins from the system, while the BioActive Carbon molecules provide the biological building blocks to heal your system.

How it Works

- The liver and kidneys work continuously to filter, detoxify, and remove harmful factors. HM-ET Binder supports these routine detox functions.
- At the same time, this BioActive Carbon-based binder supplies needed materials to the cells to support their structure and function. Plus, it promotes the integrity of the gut lining and microbiome health.
- The half-life of HM-ET Binder is 12-18 hours, so it's ideal to take the product at least twice a day. The capsules can be opened, and the contents readily dissolve in water.

Ingredients

Humic Acid
Polyelectrolytes of Fulvic Acid
Polysaccharides of Fulvic Acid
Dibasic Acid of Fulvic
Micronized Zeolite Clinoptilolite
