

# Inflamma Control

## PROTOCOL USAGE

PHASE 1

PHASE 4

## Key Functions

- Promotes Nrf2 activity, a pathway that aids detox and antioxidant protection systems
- Supports inflammatory balance, such as in response to mild stressors and toxins
- Encourages homeostasis in the body, which is especially helpful for sensitive individuals

## Details

Inflamma Control also provides plant compounds that can help to protect the liver and nurture microbiome health. In addition, the product's plant extracts could support mitochondrial function.

## How it Works

- Sometimes inflammation can get stuck in the “on” position, preventing your body from functioning like it was designed to. Help fuel your body with the natural anti-inflammatories in Inflamma Control. These 11 plant-based inflammation tamers help quiet rogue inflammation levels back to healthy levels. This can help your body reset, promote detox, and put you on the path to optimum health.
- New research suggests that chronic inflammation is a contributing factor to chronic illness. The inflammation switch gets “flipped on” in order to stimulate the healing process, but as a result gets stuck in the “on” position, causing a cascade of uncomfortable symptoms. Inflamma Control helps to move that switch by stimulating your own natural anti-inflammatory pathways.
- Together, these powerful plant extracts soothe chronic inflammation which helps your body function of an optimal level.

## Ingredients

Broccoli Sprouts

Mulberry

Artichoke leaf

Blueberry

Wheatgrass

Acai

Pineapple Bromelain

Olive Leaf

Citrulline

Pomegranate

Astaxanthin
