

PROTOCOL USAGE

PHASE 1

PHASE 2

PHASE 3

PHASE 4

Key Functions

- Supplies minerals and amino acids to support routine detoxification
- Promotes cellular uptake at any pH level due to its formulation with fulvic acid extracts
- Provides building blocks for cellular energy production, which is needed for detox

Details

With over 70 naturally occurring, plant-derived trace minerals and twelve amino acids, this supplement is highly bioactive and can perform numerous biochemical and metabolic detoxification functions.

How it Works

- At the heart of this mineral product are naturally sourced, highly purified, and precisely formulated polyelectrolyte and polysaccharide extracts of fulvic acid. These are nano-sized molecules designed to penetrate human tissues and cells easily.
- The fulvic acid molecules help deliver the minerals and amino acids to tissues and cells in the needed form. Several of these nutrients—including zinc, magnesium, and methionine—are used to support liver detox processes and energy metabolism.
- The liquid format makes it simple to fine-tune dosages and facilitates absorption. And, the fulvic acid-based formulation promotes mineral balance in the body.

Ingredients

BioActive Carbon (Extracts of Humic and Fulvic Acid)

Plant-derived Minerals

12 Amino Acids
