

PROTOCOL USAGE

PHASE 5

Key Functions

- Promotes normal immune cell activity and antioxidant status to help protect tissues
- Contains herbs that support cellular Nrf2 pathways, promoting inflammatory balance
- Supports digestive health and detoxification pathways, aiding liver health and bile flow

Details

IS-BOOST is a tincture of 14 herbs. The product is designed to support the immune system's normal function and balance.

How it Works

- IS-BOOST is a potent blend of herbs to supercharge your detox protocol. It's the perfect add-on to any pathogen and parasite cleansing protocol, offering adaptogenic properties, reducing inflammation, supporting the immune system, protecting your drainage organs, and inhibiting pathogens systemically in the body.
- Whether taken on its own or with other immune support products, IS-BOOST can promote normal immune cell activity. It can help maintain microbiome health and deter unwanted microbes, too.
- In addition, some of the product's herbs, such as cilantro leaf and licorice root, can help aid inflammatory balance and tissue health. That includes supporting cells' Nrf2 pathway, a key regulator of antioxidant status and inflammation.
- Herbs such as dandelion root and quassia bark in IS-BOOST also support detox protocols. They promote digestive health, normal liver function, and bile flow.

Ingredients

Black/Green Walnut Hulls
Boneset
Cilantro
Dandelion Root
Licorice Root
Oregano
Oregon Grape Root
Pau D'Arco Bark
Quassia Bark
Suma Root
