

PROTOCOL USAGE

PHASE 2

Key Functions

- Helps strengthen and restore the body's ability to drain, filter and detoxify itself.
- Helps flush unnecessary or unwanted buildup, infection, dysfunction and more.
- Promotes proper kidney and liver function.

Details

This unique blend of natural ingredients is designed to help strengthen and restore the body's natural ability to drain, filter, and detoxify itself. Whether the issue is heavy metal build-up, metabolizing fat, bladder dysfunction, or chronic infection, Kidney & Liver Support can help flush the body's systems and promote proper kidney and liver function.

How it Works

- Through a unique blend of natural ingredients, this product supports and promotes healthy kidney and liver function. As an integral part of the body's cleansing and filtering system, proper kidney function is essential to any detox protocol.
- Multiple studies have shown that parsley gynostemma promotes antioxidant production, helping aid in heavy metal detoxification. Additionally, it assists the liver by modulating fat metabolism, and protects and improves kidney function by decreasing blood fats.
- Collinsonia root supports urinary tract symptoms, including bladder pain. The betaine in beet root may help prevent or reduce fatty deposits in the liver and may also help protect the liver from toxin buildup. Studies indicate that marshmallow root has diuretic properties, and anti-inflammatory and antibacterial characteristics, specifically in the urinary tract.
- Our BioActive Carbon complex helps to bind to toxins that are removed, allowing your body to flush them out. As with all BioActive Carbon products, you can take Kidney & Liver Detox with or without food. Simply add it in earlier in the day and later in the day for best results.

Ingredients

N-Acetylcysteine (NAC)

Milk Thistle

Marshmallow Root

Gynostemma

Collinsonia Root

Beetroot

Parsley
