

PROTOCOL USAGE

PHASE 3

Key Functions

- Supports immune cell activity, inflammatory balance, and microbiome health
- Offers an optimal blend of herbs in a tincture format to maximize potency
- Provides phytochemicals to support liver and digestive system health

Details

Take your immune-boosting protocol to the next level. Para 3 is not just a new combination of herbs to fight pathogens. This new tincture format contains biomolecular oxygen to absorb quickly--even before it hits the digestive tract. Para 3 is designed to absorb deep into tissues to address pathogens other products can't.

How it Works

- Designed to absorb deep into the tissues, Para 3 is a synergistic blend of herbs to provide powerful immune support.
- Para 3 consists of seven herbs in a tincture made with certified organic cane alcohol. That extracts beneficial compounds from the herbs, increasing their concentration and potency.
- The herbs in Para 3 include sage leaf, tansy, thyme leaf, epazote, black walnut hull, holy basil leaf, and clove bud. Holy basil functions as a driver for the systemic distribution of the herbs in the body.
- The liquid format of Para 3 offers dosing flexibility and usage versatility. Due to its potency, cycle Para 3 by taking it for three weeks, then take one week off. Besides taking it orally, use Para 3 in a nasal rinse with distilled water to support sinus health.

Ingredients

Sage Leaf

Tansy Herb

Thyme Leaf

Epazote Herb

Black Walnut Hull

Holy Basil Leaf

Clove Bud
