

PROTOCOL USAGE

PHASE 3

PHASE 4

Key Functions

- Helps bind and remove unwanted microbial and environmental factors
- Supports detoxification and nourishment at the cellular level
- Promotes normal microbiome health and immune system function

Details

ViRadChem Binder from CellCore is a game-changer. It is designed to get to the source of chronic symptoms by targeting viruses, retroviruses, radiation, and chemical toxins.

How it Works

- At the heart of the binder are humic and fulvic acid extracts. These BioActive Carbon molecules are formulated at a nanoparticle level. This microscopic size enables them to travel deep within the body and bind unwanted environmental and biological factors.
- In addition, the BioActive Carbons can provide cellular building blocks where they're needed in the body. Supporting cell health is foundational for a detox protocol.
- ViRadChem also supports microbiome health and helps maintain normal immune function. Consider this product as a tool for health maintenance, as well as detox.

Ingredients

12 Amino Acids

BioActive Carbon (Extracts of Humic and Fulvic Acid)

Plant-Based Organic Acid Extracts
