

MÖDERE® FAQs

MODERE CELLPROOF SUNLESS TANNING FOAM

Personal Care | Skin

What makes CellProof Sunless Tanning Foam unique?

- CellProof Sunless Tanning Foam is the only sunless tanning foam that features BioCell Collagen® CG backed by Collagen/HA Matrix® Technology. It delivers authentic-looking, true color results plus anti-aging benefits from Bio-Optimized™ collagen and hyaluronic acid.

Does Modere CellProof Sunless Tanning Foam have a “fake tan” smell?

- No. It is formulated with natural coconut and vanilla extracts.

How do I get an even, streak-free application with CellProof Sunless Tanning Foam?

- Sunless tanners may streak when application gets concentrated where skin is driest or creased. To optimize your application, begin by thoroughly exfoliating any areas you wish to apply CellProof Sunless Tanning Foam. Apply Modere Hand & Body Lotion or Modere Body Butter to moisturize very dry and/or textured areas like hands/cuticles, elbows, knees, wrists and ankles, but do not moisturize head to toe. (Sunless Tanning Foam contains natural moisturizers and hyaluronic acid to promote an even application.) Apply foam in circular motions and thoroughly wash hands when you're finished

Is a tanning mitt necessary for application?

- CellProof Sunless Tanning Foam was formulated for an easy, mess-free and streak-free application without a tanning mitt, but you may use a tanning mitt if you like.

Can Modere CellProof Sunless Tanning Foam be used on the face and neck area?

- Yes, it is formulated to be safe for most skin types, and may be used on the face and neck area. A patch test is recommended for extremely sensitive skin. Apply a small quantity of foam to a discreet area that will be hidden under clothing, and allow 24 hours to test for a reaction. If any redness or irritation occurs, wash off product with soap and water and discontinue use.

Can Modere CellProof Sunless Tanning Foam be applied over tattoos?

- Yes, tattoos will appear the same as if skin had a natural tan from the sun.

Is Modere CellProof Sunless Tanning Foam a one-time application?

- CellProof Sunless Tanning Foam delivers natural looking color after one application and will develop within 4-8 hours. For darker color, wait 4-8 hours between additional layers of application to allow full development time and a true color result, repeating until desired color is achieved. Color will fade naturally within a week without reapplication.

How can I make my CellProof Sunless Tanning Foam application last?

- The duration of application can vary person to person, based on your skin's natural exfoliation. For best results, moisturize daily and reapply CellProof Sunless Tanning Foam every 5-7 days to maintain desired color.

If I miss an area on first application, can I reapply to the missed area?

- Yes, apply CellProof Sunless Tanning Foam to the missed area. A Modere moisturizer can be used to help blend over the top of the area where your applications overlap for a more even appearance.

I accidentally over-applied my CellProof Sunless Tanning Foam and my color is too dark/uneven. Can I remove excess color?

- To help remove excess color, gently exfoliate any over-applied areas with Modere Exfoliant or a dry body brush.

How do I use both Modere CellProof Body Firming Foam and Modere CellProof Sunless Tanning Foam?

- Once CellProof Sunless Tanning Foam has been applied and dried completely you may layer and continue regular use of CellProof Body Firming Foam. With twice daily use, Body Firming Foam helps promote firmer looking, toned skin and will increase the longevity of your CellProof Sunless Tanning Foam application.

Can I go swimming or shower after Modere CellProof Sunless Tanning Foam application?

- To achieve full color, do not get skin wet until CellProof Sunless Tanning Foam has developed, 4-8 hours after application. Once color has developed, you can swim, bathe or shower.

Will the color come off on my white clothes or sheets?

- CellProof Sunless Tanning Foam features a quick-dry, transfer-resistant formula designed to prevent discoloration of clothes or sheets. Allowing foam to dry thoroughly prior to dressing will help keep application even.

Is Modere CellProof Sunless Tanning Foam colorless when applied, or does it contain a bronzing agent?

- CellProof Sunless Tanning Foam is colorless when applied to alleviate messy transfer to clothing. It does not contain a bronzing agent.

How many applications are in each bottle?

- Modere CellProof Sunless Tanning Foam contains approximately 8-10 full body applications per 200mL bottle.

Is Modere CellProof Sunless Tanning Foam gluten-free?

- Yes, CellProof Sunless Tanning Foam is gluten-free.
