

BUILDING OF API'S FOR EASY INTEGRATION WITH THIRD PARTY PARTNERS

CLIENT BACKGROUND

The client is a leading Indian health insurance firm established in July 2012. The company is headquartered in Gurgaon, Haryana and operates out of 146 offices across India with 6000+ employees. The company currently offers products in the retail segment for Health Insurance, Critical Illness, Personal Accident, Top-up Coverage, International Travel Insurance and Maternity along with Group Health Insurance and Group Personal Accident Insurance for corporates.

PROBLEM STATEMENT

The client wanted a portal to be built wherein all its 3rd party partners like aggregators, banks, wallets, etc use all its API's.

CHALLENGES

The partners request the insurance client to:

1. Build the API's both on the front end and back end
2. Expose the API's as they already have an in-house development team

OUR APPROACH

Monocept developed the end-to-end API portal from back end to front end. Some partners just use their backend API's if they do not want to use the front-end API's.

BENEFITS

Easy integration with different partners of the insurance company
