

WESTBURY WRAPS: A SIMPLE WAY TO ELEVATE EXISTING STRUCTURAL POSTS

What are Westbury Wraps?

Westbury Wraps are non-structural aluminum staves designed to wrap around existing structural posts or columns. They provide a clean, finished, architectural look while maintaining the strength of the original support.

Key Features

Aluminum Stave System

Precision-formed aluminum staves create a seamless wrap

Designed for Existing Structures

Wraps wood or steel posts without removing them

Non-Structural Design

Enhances appearance without altering load-bearing components

Clean, Finished Look

Conceals weathered, mismatched, or aging posts

Low-Maintenance Material

Won't rot, crack, or warp

Color-Matched Options

Coordinates with Westbury Aluminum Railing and outdoor living products

Professional Appearance

Elevates decks, porches, and outdoor living spaces

Benefits

Upgrade Without Replacement

Improve the look of existing support posts or columns without replacing them

Save Time on the Jobsite

Faster than replacing structural posts or columns

Consistent, Polished Design

Creates a cohesive look with other Westbury products

Long-Term Durability

Aluminum stands up to the elements year after year

Lower Maintenance for Homeowners

No sanding, painting, or sealing required

Increased Curb Appeal

Transforms basic posts into architectural features

Examples / Uses

- Elevated back yard decks
- Porch columns
- Covered patios
- Outdoor living structures
- Remodeling and refresh projects

Designed to install around an existing, code-compliant structural post or column.

IMPORTANT REMINDER

Westbury Wraps are non-structural and must only be installed around a properly engineered, load-bearing post or column.
