CONTROL YOUR LIVING SPACE

From the first one invented in America by Hubbel in 1904  
to the German-made Schuko dated 1926, the socket has come  
down to us as the silent player in our electrical systems.

**EKINEX HAS GIVEN THEM A NEW LEASE OF LIFE.**

# CONCEPT & CONTEXT

## Family feeling

Products designed and created following a strictly harmonious stylistic line, focusing on the smallest details, to ensure that the interaction with the environment is beautiful, clean, essential.

## Multiple combinations and alternatives

The need to connect to the electricity network has increased in recent years; the list of devices that require a plug-in power supply is virtually endless. Ekinex offers an extensive range for the Italian and international markets.

## Traditional installations

Limited and not very well integrated with its surroundings, the socket has always been considered an essential element, but one with limited appeal.

The focus has always been on functionality and little on aesthetic impact. The limited range of colours did not contribute to the image of chromatic coherence that contemporary installations require.

## The Ekinex style

Ekinex has paid particular attention to this detail with a special painting process that allows the socket to be colour matched to the other wall elements in its range.

The inclusion of a USB output responds to the increasingly pressing need to connect to numerous devices for home or work use.

VERSIONS

## Italian version (standard and USB A-C)

The new Ekinex Italian standard sockets are available in a dual-step version (10-16A) with and without USB, bringing them in line with the latest charging standards with A and C ports and a maximum of 3.5A.
