Detailed Directions for Application

- 1** Developed for use with the Youthbomb™ Nanomist Activator device.
- 2** Gently shake before using.
- 3** Squirt one full dropper of Nanomist Activator Concentrate into the device water well after filling with water.
- 4** Use throughout the day, refill as often as needed.

Do not apply Nanomist Activator Concentrate directly onto skin in concentrated form.

Always dilute with water as directed.

Store at room temperature.

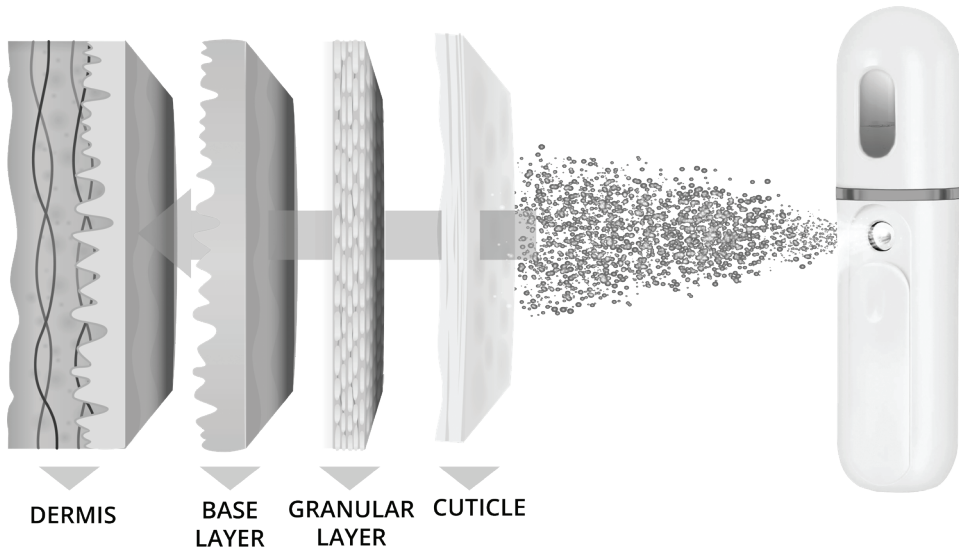

Use only as directed.

Discontinue use if irritation or discomfort occurs.

MORE THAN SKIN DEEP

Nano Delivery Puts the Power of Anti-Aging in Your Hands

Our Nano Atomization technology Nano-Amplified™ the most potent anti-aging ingredients to deliver the youthful benefits of millions of micro particles (300-500 nanometers) with targeted precision and instant skin absorption.

Key Ingredients

Nanosomal™ Skin Active CBD

(from Hemp) High-Performance, Anti-Aging, Time-Released CBD

Phytocannabinoids like CBD are a growing beauty essential when it comes to ageless looking skin. Research shows our body has an Endocannabinoid System (ECS) with a network of receptors internally and externally that functions to keep our mind, body and skin healthy, vibrant, glowing and ageless. A powerful antioxidant, CBD reduces inflammation both internally and externally, and reduces free radical damage to promote more radiant and youthful skin. Our patent-pending, time-released antioxidant-rich CBD goes way beyond a normal CBD-infused product. Our Nanosomal™ Skin Active CBD releases tiny, potent nanosomes filled with pure CBD that penetrate the skin instantly and deeply to bring skin back to its youthful bliss in seconds. Several studies suggest that CBD could actually slow down the visible signs of aging, and with its anti-inflammatory effects it may be helpful for relieving skin conditions such as acne, psoriasis, and eczema.

Stabilized Vitamin C

“C” the Difference It Makes

It's a fact that the natural vitamin C levels in both the surface and deeper layers of the skin decrease

as we age, which directly results in less collagen levels in our skin. It's also a fact that stabilized vitamin C is one of the best things you can put on your skin to dramatically reduce the signs of aging. It really does it all as an anti-aging ingredient! A potent antioxidant, it neutralizes free radical damage at the cellular level and protects the skin against photodamage. Studies show stabilized vitamin C has the ability to slow the production of melanin in such a way to prevent and reduce the appearance of dark circles, sun spots and pigmentation. Combine that with its amazing skin brightening properties and it's easy to see why experts call it a must-have for ageless skin. It's also a natural collagen booster and has been proven to enhance the overall texture of the skin leaving it feeling firmer and smoother.

Alpha Arbutin

The Secret Ingredient to Ultra-Bright Skin

Dermatologists love this skin care ingredient, but most people may have never heard of it...that's soon to change. This secret ingredient is "berry" good for skin brightening and evening out skin tone, one of the most annoyingly visible signs of aging. Some experts say Alpha Arbutin's ultra skin brightening benefits are even better than stabilized vitamin C and when combined with Vitamin C and Nanosomal™ CBD, the result is a powerful triple threat against aging. A molecule extracted from plants like blueberries, cranberries, and bearberry, this powerful botanical extract helps to visually reduce the look of hyperpigmentation, breakouts, sun damage and even scarring. Alpha Arbutin

blocks enzymes in the skin called tyrosinase to lighten and brighten skin. Hyperpigmentation and dark spots are produced in cells called melanocytes, which contain tyrosinase and are activated by sun exposure. The beauty of Alpha Arbutin is that it offers superior skin-brightening benefits and is completely safe for all skin types, even those with sensitivities. It's a safe, effective, and natural alternative to the popular yet highly controversial and internationally banned ingredient, Hydroquinone.

Organic Silanols from Sea Kelp Extract (Methylsilanol Mannuronate)

The Sea Algae that Keeps YOU Ageless

Organic Silanols (Methylsilanol Mannuronate) is an organic derivative of seaweed, a powerful skin antioxidant known to actively prevent premature aging and free radical damage at the cellular level. According to research, Organic Silanols may have the ability to promote skin regeneration through collagen production by increasing what's called "fibroblast proliferation." Fibroblasts are cells in the connective tissue that produce collagen. By increasing fibroblast proliferation, Organic Silanols appear to boost collagen production resulting in visibly firmer, smoother and more youthful skin. In other research, Organic Silanols have been shown to protect structural proteins, preserve youthful collagen and elastin fibers from what's called Advanced Glycation End Products (AGEs), which causes healthy collagen and elastin fibers to break down... think sagging skin. Healthy collagen production is the key to visually restoring skin to youthful per-

fection. There's more, rich in skin-reviving amino acids and minerals it promotes advanced moisture release to plump the skin and diminish fine lines. It's also been shown to have incredible detoxifying properties. When it comes to anti-aging, you might ask, what doesn't it do?

Amino Acid Complex

The Ultimate Building Blocks for Younger Skin

Amino Acids are probably the most essential components to any anti-aging skincare routine. They are naturally present in the skin in the way of natural moisturizing factors (NMFs), and they support cell growth and renewal when it comes to collagen (protein) production. Unfortunately, aging can take a toll on our skin. When we are younger, cells renew every 28 days. By age 40, cell renewal slows down to 30-40 days with collagen and elastin production starting to decline as young as age 25. That's why Amino Acids are super important to keep skin looking and feeling ageless at any age. These potent skin care superstars work with our skin's aquaporins to hydrate and propel moisture to all the right spots. When our skin is properly hydrated it always looks more youthful and supple. Even better, Amino Acids work in harmony with our skin to form peptides (protein fragments) and stimulate collagen production for smoother, firmer, more flawless, and less wrinkled skin. These tiny peptide powerhouses also play a supporting role in helping our skin create more of its own antioxidants, creating a natural defense against free radical damage that results in premature aging.

FAQs

Can I use the Nanomist Activator Concentrate without the Nanomist Activator?

The Activator Concentrate is not intended to be applied directly to the skin and should be diluted before use. The special blend of ingredients found in the Activator concentrate were chosen for delivery via the Nanomist Activator. For optimal results, these two products should be used together. The nano atomization technology of the Nanomist Activator creates an ultra-fine, cloudlike mist which provides for superior penetration and absorption of all the key ingredients.

Can I use more than one dropper full of Activator Concentrate?

No. The Nanomist Activator uses a very delicate and sophisticated technology to generate a nano atomized mist. Adding too much Activator Concentrate to the device water well may leave the solution too viscous to process causing the device to clog and/or cease to function. If this occurs,

see the FAQ below for troubleshooting tips. Please use as directed.

Help! I added too much Activator Concentrate to the Nanomist Activator and now the device won't mist.

If this happens, reclose the cap on the Activator and try tilting the device upside down 4-5 times to allow the solution to mix and disperse. Turn on and test the device. If the mist effect is low but working, turn off the device and spill half the contents of the device well. Refill with purified water and mix again to disperse. Turn the device on. If the device still does not mist, it may be clogged. Follow the device care instructions to clean the device atomization plates.
