

PRE-OPERATIVE INSTRUCTIONS

For any patients planning for or anticipating IV anesthesia:

- No eating or drinking at least 6 hours before the procedure.
- Your regular medications, including blood pressure and heart medications, should still be taken with sips of water unless otherwise directed by our doctors. Please call us for further instructions.
- If you were given a pre-operative antibiotic, be sure to take it as prescribed.
- A driver is required to take you to and from our office.
- Wear a short-sleeved shirt and comfortable clothing to allow for your comfort and access to your arms for the IV.
- Do not wear contact lenses.
- Do not wear heavy makeup, lipstick, perfumes, or cologne.
- If you are prescribed a rescue inhaler for asthma, please bring this with you on the day of your surgery.
- If you are a diabetic, please bring your glucose or glucometer with you and your regular insulin medications and syringes.
- If you take nitroglycerin for chest pain, please bring this with you.
- If you are coming down with a fever, cough, sore throat, cold, or flu, please call us as soon as possible.

Please call us with any questions regarding your procedure or the anesthesia.
