

COLD RUSH™

REHAB SYSTEM

RECOVER WITH LESS PAIN & SWELLING!

Cold therapy reduces blood flow to the affected area resulting in reduced inflammation and pain. The Cold Rush provides many advantages to ice packs that leak and warm up quickly:

- Longer lasting, consistent temperature for the therapy session
- Better coverage with Össur's ergonomic pads that conform to your body
- Designed with an insulated locking lid to prevent spills
- Whisper-quiet letting you get the rest you need to properly rehabilitate

Start using your Össur Cold Rush the day of your surgery and continue for 2-3 weeks at home during your recovery. Always consult your physician before using cold therapy and follow the protocol they advise.

PROTECTION. REST. ICE. COMPRESSION. ELEVATION

“When I went in for a hip replacement, I used an Össur Cold Rush to help reduce the swelling from the operation. It was sitting beside my bed when I returned home, full of ice and ready to go. It turned out to be far more convenient than water bottles or ice packs. *I am convinced that the minimal pain and quick healing was, in a great part, due to the Össur Cold Rush system.* I don't hesitate to recommend this product to my friends.”

Lyle Gatley,
Former Olympian

ERGONOMIC PADS THAT FIT COMFORTABLY

Cold Rush pads elevate the cold therapy experience to a new standard of fit and comfort. Ergonomically-engineered to improve function, Cold Rush pads mimic the body's natural contours delivering even cold therapy.

Designed to specifically fit the knee, foot & ankle, shoulder, back and hip, we've got you covered. Additionally available in universal and rectangular.
