

NOSILIFE

Why NosiLife?

The NosiLife range offers an adventure-ready line of kit that has been designed to offer an effective defence against biting insects.

Craghoppers' unrivalled insect repellent technology is proven to defend against bites from insects like mosquitos. It is known that insects such as mosquitos can carry life-threatening illnesses such as malaria, dengue fever and zika virus.

NEW AND IMPROVED TECHNOLOGY

- Dual technology – true insect repellent and built in odour elimination.
- Both benefits last the lifetime of the garment
- The active ingredients are plant-based and from a renewable source
- Low toxicity chemistries
- Due to the mode of action insects are unable to build up resistance to the active ingredient

HOW DOES IT WORK?

The new NosiLife system technology contains an active ingredient that repels insects, so they do not dwell or land on the fabric, reducing the possibility of being bitten.

The additional odour elimination technology captures and neutralises body odours during wear so the garment stays fresher for longer.

Both technologies are derived from a plant-based renewable source.

The active ingredients are applied using our unique application process designed specifically to ensure the treatment lasts the lifetime of the garment.
