**Hands-On Engineering** - Our lessons bring engineering to life as students **design, build, and refine** models of real-world machines using LEGO® bricks. They explore how structures stay strong, how mechanisms work, and how to improve designs through hands-on problem-solving. Every session challenges them to think like engineers—analysing, testing, and improving their creations.

**Engaging, Challenge-Based Learning** - Our classes are designed to **captivate and challenge students at every level**. Whether they're just starting or already passionate about engineering, each session introduces exciting projects that encourage **creative problem-solving and hands-on exploration**. With new builds and engineering challenges each term, students stay engaged, motivated, and constantly discovering new ways to bring their ideas to life.

**Peace of Mind** - all educators are working with children compliant according to state laws. All after-school clubs operate in agreement with the host school.

Young Engineers club is an Australia-wide initiative to help kids Learn and L♥VE STEM
