

Engility CTMS, is a new and unique Clinical Trial Management System designed to simplify the management and control of clinical trials

### Enterprise Trial Management

Deliver enterprise control of your clinical trials portfolio with an easy to use, intuitive interface to track study progress including enrolment, milestones and essential documents. Maintain organisations and associated contacts including global investigators. Manage GCP oversight across flexible supply chains.

### Configurable Design

Implement and visualise high level trial design. Tailor security for an organisation model with the ability to configure roles and permissions. Utilise industry and company wide data across the portfolio to accelerate set-up, reduce data duplication and improve information consistency.

### Investigator & Site Payments

Plan, track and support global site and investigator payments including multiple payees. Manage multiple versions of site contract terms including fees and holdbacks. Schedule and trigger payment requests that can be tracked at site and study levels.

### Interoperable

Seamlessly integrate with your eClinical application portfolio including EDC and eTMF through REST APIs. Flexible import/export capabilities to accelerate set-up, perform additional data processing, reduce manual data entry and reconciliation. Improve clinical trial transparency by using Engility CTMS to simplify registration with public registries such as ClinicalTrials.gov.

## Engility CTMS Features

### Business Intelligence

Powerful business intelligence through both embedded dashboards and system reports across study management, payments and administration. Select and filter reports across study, country and site. Powerful, searchable, user friendly audit trail supports regulatory compliance.

### Software-as-a-Service

Engility CTMS provides an innovative cloud trial management platform for rapid implementation and seamless product upgrade cycles. Leverage PHARMASEAL's automation model and validation assets to reduce internal company overhead.
