

Brave new world?

Man has bred animals for research for decades, but their use in the laboratory is increasing. In 1994 the total number of experimental animals was 15,000 to 2.8 million. Genetic engineering is now the fastest-growing area of vivisection. The number of animals used in experiments were tinkered with as part of a programme by 22 per cent to 256,000.

How does this make you feel?

disabled sport. The cynical might say it will simply promote Nike. "I did wonder whether this ad was going to be in good taste," he admits. "But when they explained the idea to me, I quite liked it. It portrays me as an athlete, not a victim.

and I think it's a positive message. "The fact is, I've always been like this. I was born like this and you don't miss what you've never had. I dream of having limbs. Of course I do. But I'm happy the way I am and I get on.

UGLY DUCKLING

How cruel life can be for an unattractive child. I was in a class with a girl who was very unattractive. She was called 'Ugly Duckling' and I thought that was a bit mean. I thought I was the only one who was unattractive. I thought I was the only one who was unattractive. I thought I was the only one who was unattractive.

Television exposure damages child

babies in inner-city Manchester showed television exposure was delaying speech. The following could be stopping us: directors in this country are men, and they are promoting a certain view of the world. The following could be stopping us: directors in this country are men, and they are promoting a certain view of the world.

body, that is, except for the fact that I thought there had been a mistake and that my inventory had been lost. But when I inquired to the hostess, she beat about the bush: "Susie, you're too fat to go to the beach."
