

Pivigo is seeking a

Senior Software Developer

with immediate start date.

Introduction:

At Pivigo we are building the leading marketplace for data science. With our five years of experience running Europe's first, largest and most successful data science bootcamp, and our current web portal, we are deeply involved with the data science community. We are now looking for an experienced developer to join our dynamic and creative team, to use their knowledge and motivation to help us continue to innovate and deliver a series of new, engaging features for data scientists. If you want to be a leading figure in shaping our exciting product and use your knowledge about building great web applications to create a unique, online experience for the data science community, this is for you!

We develop in ReactJS and Python, use Kubernetes for deployment, and rely heavily on coffee and laughs to keep us happy and sane. The position is ideal for someone who have a lot of knowledge that they want to put to good use and pass on, want to make an impact, make decisions and take on some first tech leadership - but also want to keep learning from a very diverse team.

What we are looking for:

We are looking for talented, interested, and curious software developers to join us in our efforts to build new and useful tools for data scientists.

As software developer you will have some experience with web application development, specifically at least some of the following:

- React (or another Javascript framework)
- Python
- Relational databases (MySQL or Postgres)
- Working in an agile team (we do Scrum)
- Nice to have: docker

As a more senior member of the team you will be responsible for all aspects of the development, understand the importance of clarity in requirements, the importance of testing at all levels, and have a good understanding for how to write maintainable code.

What you get:

We offer a competitive salary, but more importantly you will be part of a small team working on a new platform for data science. Your contribution will matter. You will matter and you will get the respect of a global community of data scientists, as well as be part of a young, dynamic and fast growing team. Other benefits include a weekly professional massage, an unlimited supply of cookies and many vouchers and deals via Perkbox. We often organise Pivigo team days to enjoy each other's company and our successes.

Applicants must have their own right to work in the UK as Pivigo is not able to support visa applicants.

Apply by sending a CV and cover letter to jobs@pivigo.com
