Your perfect fit
brink.eu

IMPORTANT!

Installation of the towing electrics kit must be undertaken by a specialist workshop or an appropriately qualified person. Before starting work, you must read the installation instructions through completely. After installing the towing electrics kit, the installation instructions should be kept with the vehicle service documentation.

All claims under the guarantee will lapse in case of improper use or modification of the towing electrics kit or any of its component parts. When driving without a trailer or load carrier, any adapter installed must be removed from the electrical socket. We reserve the right to alter the design, content or colour. We accept no liability for any errors in these instructions. All details and illustrations are non-binding.

In case of missing a rear fog lamp on the trailer, it should be retrofitted.

We accept no responsibility and give no guarantee for technical and electrical modifications made after the initial operation of the towing electrics kit by the vehicle manufacturer and which may lead, for example to malfunction of the trailer socket or its peripheries.

The trailer module is not diagnostics-capable. If the manufacturer's diagnostics processes or software-supported test mechanisms generate error reports directly or indirectly linked with trailer operation, the trailer module must be disconnected from the leads to the trailer socket and a new diagnostic process initiated.

SYMBOL EXPLANATION

	left (58-L) respectively right (58-R) tail light
	stop light (54) / high mounted, third stop light (54)
	turn signal indicator left
	turn signal indicator right
	rear fog light(s)
	reversing light(s)
	Permanent power supply / 13pin socket, chamber 9
	charging wire for trailer battery / 13pin socket, chamber 10
	trailer / trailer recognition
	Permanent current power supply
	Ground or Earth (31)
	ground connection battery terminal lug
	positive connection battery terminal lug
	fuse / fuse capacity 20 Ampère

	cigarette lighter / accessory socket
	loudspeaker / buzzer
	Park Distance Control
	switch / source of function
	Connect together
	Disconnect
	Look at / See further information
	Look carefully at selected area
	Present / Occupied / OK
	Not present / Not occupied / Not OK
	left
	right
	acoustic indication
	attention / important advice

ATTENTION!

The vehicle's cooling capacity may have to be increased when retrofitting a trailer coupling!
You must observe the manufacturer's instructions!!

ATTENTION!

In order to avoid mal-functions and damage to the vehicle's electrical system the earth terminal **must be disconnected** from the vehicle's battery **before starting work!**

Both the trailer module and the vehicle's control unit for the electrical system can be damaged during work on the data bus connections if the battery is not disconnected!

Please pay attention to the manufacturer's instructions when disconnecting and reconnecting the vehicle's battery!

45

The following lamp functions for the trailer are not supported by all towing vehicles with DRL circuit:

- Rear lights
- Side lights
- Numberplate lights

The parking lights or dimmed headlights must be switched on to activate this function!

46

Set up trailer operation

General

After the installation of the electric kit, the obligatory trailer lighting, Towing vehicle and trailer stabilisation, as well as the trailer indicator control which is statutory in a several countries are guaranteed without having to make any connections on the vehicle!

The message "Control unit incorrectly coded" will, however, appear in the fault memory (19 – Diagnosis interface for data bus)! Yet this entry has no effect on the other functions and can be ignored until your next regular service appointment. We recommend the connection via the factory-mounted service tester within the framework of the annual service intervals!

Please effect coding as follows:

- Vehicle self-diagnosis
- self-diagnosis
- 19 – diagnosis interface for data bus
- 008-Coding (service 22)
- 008.02 assembly list coding
- 69 – trailer function (switch to coded!)
- confirm with OK !

Vehicles with park assist systems:

The automatic deactivation of the rear park assist system in trailer operation will be effected by means of the subsequent coding of the park assist control unit:

- Vehicle self-diagnosis
- 10 - park assist system II
- 009 Coding
- Master
- 009.02 plain text coding
- select trailer system
- confirm with OK !

Vehicles with front sensors:

On vehicles with front sensors, the control unit must be coded as follows:

- Vehicle self-diagnosis
- A5 front sensors
- coding
- Master
- clear text encoding
- trailer → with hitch
- press "continue"

NOTE:

Systems such as power assisted steering, Lane Change Assistant and Side Assist must be de-activated during towing. Please consult your owner handbook or dealer for further information!

Vehicles with start-stop system:

The start-stop system is deactivated in trailer mode!

Towing vehicle and trailer stabilisation:

In most vehicles as of model year 2009 the automatic activation the towing vehicle and trailer stabilisation can be checked as follows:

- Connect trailer to vehicle electrically
- After the ignition has been turned on the control lamp  comes on two seconds longer than control lamp  (see also driver's manual)!

or evaluation via vehicle diagnosis:

- Connect trailer to vehicle electrically
- Vehicle self-diagnosis
- 03 Brake electronics
- 011 Measured values
- Enter "10" and "Q"
- Trailer yes

47

Diagnosis function of control LEDs

Indicator failure detection and lamp substitution if the trailer indicators fail

The failure of a single or on both trailer indicators will be shown depending on the type of vehicle and electric kit installed as follows:

- Increase in the flashing frequency
- Text message in the Display / combi-instrument
- Activated control lamp for light failure
- Audible warning via Buzzer or Voice-Message

If an indicator fails the left or right light compensates the faulty indicator by flashing at the correct frequency! (↗ lamp substitution).
