IMPORTANT!

Installation of the towing electrics kit must be undertaken by a specialist workshop or an appropriately qualified person. Before starting work, you must read the installation instructions through completely. After installing the towing electrics kit, the installation instructions should be kept with the vehicle service documentation.

All claims under the guarantee will lapse in case of improper use or modification of the towing electrics kit or any of its component parts. When driving without a trailer or load carrier, any adapter installed must be removed from the electrical socket. We reserve the right to alter the design, content or colour. We accept no liability for any errors in these instructions. All details and illustrations are non-binding.

In case of missing a rear fog lamp on the trailer, it should be retrofitted.

We accept no responsibility and give no guarantee for technical and electrical modifications made after the initial operation of the towing electrics kit by the vehicle manufacturer and which may lead, for example to malfunction of the trailer socket or its peripheries.

The trailer module is not diagnostics-capable. If the manufacturer's diagnostics processes or software-supported test mechanisms generate error reports directly or indirectly linked with trailer operation, the trailer module must be disconnected from the leads to the trailer socket and a new diagnostic process initiated.

TYPE 910

5

ATTENTION!

The vehicle's cooling capacity may have to be increased when retrofitting a trailer coupling!
You must observe the manufacturer's instructions!!

ATTENTION!

In order to avoid mal-functions and damage to the vehicle's electrical system the earth terminal **must be disconnected** from the vehicle's battery **before starting work!**

Both the trailer module and the vehicle's control unit for the electrical system can be damaged during work on the data bus connections if the battery is not disconnected!

Please pay attention to the manufacturer's instructions when disconnecting and reconnecting the vehicle's battery!

Trailer Simulator for 7- and 13-pin Sockets

Part-no. 765069

33

34

The following light functions for the trailer are **not supported** by all towing vehicles with DRL circuit:

- Rear lights
- Side lights
- Numberplate lights

The **taillights or dimmed headlights** must be switched on to activate this function!

35

Optional: Adapter socket 768019

Set up trailer operation

General

After the installation of the electric kit, the obligatory trailer lighting, Towing vehicle and trailer stabilisation, as well as the trailer indicator control which is statutory in a several countries are guaranteed without having to make any connections on the vehicle!

NOTE:

In order for the rear fog light to cut-off automatically on the towing vehicle whilst a trailer/bike rack has been connected, diagnostic programming of the extended trailer functions together with optional assistance systems must be performed. Please proceed with the coding as follows:

Step 1:

Supplement optional extras via „Input for retrofit and conversions“:

Add special equipment codes:

- + **Q10** cross member for trailer hitch (trailer load up to 2t)
- + **Q22** ball head fixed
- + **Q50** ball head removable
- + **QA0** trailer hitch screwed for 2,8t trailer load
- + **QA7** trailer hitch for increased trailer load 3.5t
- + **QA8** trailer hitch fixed for increased hitch load (2.8t / 3.0t GVWR)
- + **E40** trailer socket 7 pin
- + **E43** trailer socket 13 pin

Remove existing optional extras code **E57** (electrics for trailer socket)

Step 2:

1. Connect STAR DIAGNOSIS to car
2. Start program
3. Click "Controllers View"
4. code installed control units as follows:
 - a. Click e.g. "**EZS**" (Ignition)
 - b. Click "Adjust"
 - c. On the left side:
click updating SCN encoding
 - d. Go online a wait a few seconds
5. Perform the operation with all the control units

listed below:

- "**EZS**" (Ignition)
- "**SAM**" (Signal detection- and control modul).
- "**combined instrument**"
- "**ESP**" (Electronic Stability Program)
- "**CPC**" (Control Unit "Powertrain")

if fitted:

- "**AUDIO**" (car radio)
- "**PTS**" (Parktronic)
- "**reversing camera**"

► Coding finished

Diagnosis function of control LEDs

Indicator failure detection and lamp substitution if the trailer indicators fail

The failure of a single or on both trailer indicators will be shown depending on the type of vehicle and electric kit installed as follows:

- Increase in the flashing frequency
- Text message in the Display / combi-instrument
- Activated control lamp for light failure
- Audible warning via Buzzer or Voice-Message

If an indicator fails the left or right rear light compensates the faulty indicator by flashing at the correct frequency! (▶ lamp substitution).
