Additional Information

5 years of Autocad draft and design programs 9-12th grade, completed college courses while in high school, went to Wor-Wic Community college in Salisbury Maryland for architectural Engineering in Autocad. I designed blue prints for housing and 3D modules including all electrical, plumbing, landscape, using all Cad programs to create and complete a full blueprint for residential and commercial building layouts. The college had me skip there first year program and start in there 2nd year program, I finished top in class and would have everything done weeks ahead of other students. Program s included Inventor, AutoCad, revit, fusion 360, inventor Cam, autodesk inventor, Autocad architecture, Autocad civil 3D and might be a program or 2 I have used and can't think of at the moment. Also was certified in OSHA while completing cad courses.
